Burgess, 1995 Combining the economic analysis of regulation with a history of the politics of government control in the United States The Economics of Regulation and Antitrust helps students understand how regulation has developed and continues to change and how it affects economic and social welfare Burgess aims to help students understand the role of regulation in a context where markets serve as the primary but not the sole agency for society in making resource allocations The Economics of Regulation and Antitrust also places special emphasis on the economic efficiency of regulation

*Economics of Regulation and Antitrust*, 1995 **Economics of Regulation and Antitrust** W. Kip Viscusi, Joseph E. Harrington, John M. Vernon, 1995 *Economic Foundations of Regulation and Antitrust Law* David W. Barnes, Lynn A. Stout, 1992 Leads the reader gradually through the theories of supply demand and price quantity equilibrium and introduces these concepts with the help of graphs Cases explore opportunity cost normal economic profit rent and the theory of cost including total average and marginal cost as applied to the incidence of taxation tort liability and the efficient level of pollution control Second half of the book applies economic tools and consumer welfare theory to antitrust law and the regulation of natural monopolies

*Government and Business* David L. Kaserman, John William Mayo, 1995 **Lectures on Antitrust Economics** Michael D. Whinston, 2008-01-25 Antitrust law regulates economic activity but differs in its operation from what is traditionally considered regulation Where regulation is often industry specific and involves the direct setting of prices product characteristics or entry antitrust law focuses more broadly on maintaining certain basic rules of competition In these lectures Michael Whinston offers an accessible and lucid account of the economics behind antitrust law looking at some of the most recent developments in antitrust economics and highlighting areas that require further research He focuses on three areas price fixing in which competitors agree to restrict output or raise price horizontal mergers in which competitors agree to merge their operations and exclusionary vertical contracts in which a competitor seeks to exclude a rival Antitrust commentators widely regard the prohibition on price fixing as the most settled and economically sound area of antitrust Whinston's discussion seeks to unsettle this view suggesting that some fundamental issues in this area are in fact not well understood In his discussion of horizontal mergers Whinston describes the substantial advances in recent theoretical and empirical work and suggests fruitful directions for further research The complex area of exclusionary vertical contracts

is perhaps the most controversial in antitrust The influential Chicago School cast doubt on arguments that vertical contracts could be profitably used to exclude rivals Recent theoretical work to which Whinston has made important contributions instead shows that such contracts can be profitable tools for exclusion Whinston's discussion sheds light on the controversy in this area and the nature of those recent theoretical contributions Sponsored by the Universidad Torcuato Di Tella

**The Economics of Regulation** Alfred E. Kahn, 1988-06-22 As Chairman of the Civil Aeronautics Board in the late 1970s Alfred E. Kahn presided over the deregulation of the airlines and his book published earlier in that decade presented the first comprehensive integration of the economic theory and institutional practice of economic regulation In his lengthy new introduction to this edition Kahn surveys and analyzes the deregulation revolution that has not only swept the airlines but has transformed American public utilities and private industries generally over the past seventeen years While attitudes toward regulation have changed several times in the intervening years and government regulation has waxed and waned the question of whether to regulate more or to regulate less is a topic of constant debate one that *The Economics of Regulation* addresses incisively It clearly remains the standard work in the field a starting point and reference tool for anyone working in regulation Kahn points out that while dramatic changes have come about in the structurally competitive industries the airlines trucking stock exchange brokerage services railroads buses cable television oil and natural gas the consensus about the desirability and necessity for regulated monopoly in public utilities has likewise been dissolving under the burdens of inflation fuel crises and the traumatic experience with nuclear plants Kahn reviews and assesses the changes in both areas he is particularly frank in his appraisal of the effect of deregulation on the airlines His conclusion today mirrors that of his original seminal work that different industries need different mixes of institutional arrangements that cannot be decided on the basis of ideology

### **Competition Law and Economic Regulation** Niamh Dunne,2015-03-26

Niamh Dunne undertakes a systematic exploration of the relationship between competition law and economic regulation as legal mechanisms of market control Beginning from a theoretical assessment of these legal instruments as discrete mechanisms the author goes on to address numerous facets of the substantive interrelationship between competition law and economic regulation She considers amongst other aspects the concept of regulatory competition law deregulation liberalisation and regulation for competition the concurrent application of competition law in regulated markets and relevant institutional aspects including market study procedures the distribution of enforcement powers between competition agencies and sector regulators and certain legal powers that demonstrate a hybridised quality lying between competition law and economic regulation Throughout her assessment Dunne identifies and explores recurrent considerations that inform and shape the optimal relationship between these legal mechanisms within any jurisdiction

### Law and Economics of Regulation

Klaus Mathis,Avishalom Tor,2021-04-24 This book explores current issues regarding the regulation of various economic sectors theoretically and empirically discussing both neoclassical and behavioural economics approaches to regulation Regulation has become one of the main determinants of modern economies and virtually every sector is subject to general laws and regulations as well as specific rules and standards A traditional argument to justify regulatory interventions is the promotion of public interests Fixing markets that lack competition balancing information asymmetries internalising externalities mitigating systemic risks and protecting consumers from irrational behaviour are frequently invoked to complement the invisible hand of the market with the visible hand of the state However regulations can lead to unintended consequences and serve the interests of powerful private interest groups rather than the public interest and social welfare In addition new insights from behavioural economics question the traditional regulatory approaches most prominently in attitudes towards consumers Furthermore digitalisation and technological innovation in general present new challenges in terms of both the type of regulation and the regulatory process Part I of this book discusses various theoretical approaches to the economic analysis of regulations while Part II looks at specific applications of the law and economics of regulation

*Public Procurement and the EU Competition Rules* Albert Sánchez Graells,2011-01-29 Shortlisted for the 2012 Prix Vogel in Economic Law Public procurement and competition law are both important fields of EU law and policy intimately

intertwined in the creation of the internal market. Hitherto their close connection has been noted but not closely examined. This new work is the most comprehensive attempt to date to explain the many ways in which these fields often considered independent of one another interact and overlap in the creation of the internal market. In this process of convergence between competition and public procurement law, the need for this joint study is clearly apparent. As such, the book asks whether competition law principles inform or condition public procurement rules and whether they are adequate to ensure that competition is not distorted in markets where public procurement is particularly significant. The book moves away from the classical focus of public procurement on the activities of private actors, developing instead an analytical framework for the appraisal of the market behaviour of the public buyer from a competition perspective. The analysis is both legal and economic. Proceeding through a careful assessment of the general rules of competition and public procurement, the book constantly tests the efficacy of the rules in competition and public procurement against a standard of the proper functioning of undistorted competition in the market for public procurement.

*Modern Economic Regulation* Christopher Decker, 2014-10-30. Drawing from the most recent work on economic regulation, this book introduces readers to the main principles and examines how economic regulation is applied in four key public utility industries: electricity, gas, water, and telecommunications. Written for students and practitioners with little prior knowledge of economic regulation, this is an accessible, non-technical entry point to the subject area, exploring the fundamental questions: Why do we regulate? What are alternatives to regulation? Which institutions are involved in regulation? What have been the impacts of regulation? Readers will gain a clear understanding of the basic principles that apply to all regulated sectors, as well as the regulatory choices that reflect the specific economic and physical characteristics of different industries. Case studies demonstrate connections between regulatory theory and practice, and extensive references provide readers with resources for more in-depth study.
