Ecosystems Understanding Science Vol 4:

The Ecosystem Approach to Marine Planning and Management Sue Kidd, Andy Plater, Chris Frid, 2012-08-06 The marine environment is one of our most precious yet fragile natural resources. It provides a wide range of essential goods and services including food regulation of climate and nutrient cycling as well as a setting for transport recreation and tourism. This environment is however extremely complex and very sensitive to development pressures and other forms of human influence. Planning and management of the sea are similarly complicated reflecting intricate legal institutional and ownerships patterns. This creates a situation where marine ecosystems are vulnerable to over exploitation or neglect. The Ecosystem Approach to Marine Planning and Management describes how growing concern about the state of our seas is resulting in the development of new approaches to marine planning and management. For example the United Nations Environment Programme has called for the widespread introduction of Marine Spatial Planning (MSP) and the European Union has recently been consulting on a new European Maritime Policy designed to stimulate economic growth but at the same time protect the resource base. Within the United Kingdom the 2010 Marine Act draws upon the experience of town and country planning and brings into being a new system of Marine Spatial Planning. The authors show that a common feature of all these developments is an appreciation that more integrated forms of planning and management are required for our seas and that new arrangements must draw together understanding from natural science social science and many other perspectives. Adopting such a trans disciplinary and holistic or ecosystems approach the book distils the expertise of these different disciplines and seeks to promote a broader understanding of the origins and practicalities of new approaches to marine planning and management. *Index to Selected Science Publications of the Interior Columbia Basin Ecosystem Management Project*, 2000 *The Science of Learning and Development* Pamela Cantor, David Osher, 2021-06-21 This essential text unpacks major transformations in the study of learning and human development and provides evidence for how science can inform innovation in the design of settings policies practice and research to enhance the life path opportunity and prosperity of every child. The ideas presented provide researchers and educators with a rationale for focusing on the specific pathways and developmental patterns that may lead a specific child with a specific family school and community to prosper in school and in life. Expanding key published articles and expert commentary the book explores a profound evolution in thinking that integrates findings from psychology with biology through sociology education law and history with an emphasis on institutionalized inequities and disparate outcomes and how to address them. It points toward possible solutions through an understanding of and addressing the dynamic relations between a child and the contexts within which he or she lives offering all researchers of human development and education a new way to understand and promote healthy development and learning for diverse specific youth regardless of race socioeconomic status or history of adversity challenge or trauma. The book brings together scholars and practitioners from the biological medical sciences the social and behavioral

sciences educational science and fields of law and social and educational policy It provides an invaluable and unique resource for understanding the bases and status of the new science and presents a roadmap for progress that will frame progress for at least the next decade and perhaps beyond

Agro-Ecological Intensification of Agricultural Systems in the African Highlands Bernard Vanlauwe, Piet van Asten, Guy Blomme, 2013-12-17 There is an urgent need to increase agricultural productivity in sub Saharan Africa in a sustainable and economically viable manner Transforming risk averse smallholders into business oriented producers that invest in producing surplus food for sale provides a formidable challenge both from a technological and socio political perspective This book addresses the issue of agricultural intensification in the humid highland areas of Africa regions with relatively good agricultural potential but where the scarce land resources are increasingly under pressure from the growing population and from climate change In addition to introductory and synthesis chapters the book focuses on four themes system components required for agricultural intensification the integration of components at the system level drivers for adoption of technologies towards intensification and the dissemination of complex knowledge It provides case studies of improved crop and soil management for staple crops such as cassava and bananas as well as examples of how the livelihoods of rural people can be improved The book provides a valuable resource for researchers development actors students and policy makers in agricultural systems and economics and in international development It highlights and addresses key challenges and opportunities that exist for sustainable agricultural intensification in the humid highlands of sub Saharan Africa

Integrating Science and Policy Roger E Kasperson, 2012-08-06 As progress towards a greater knowledge in sustainability science continues the question of how better to integrate scientific progress with actual decisions made by practitioners remains paramount This book aims to help close the gap between science and practice Based on a two year collaborative project between Harvard and Clark Universities the book takes as its focus the vulnerability and resilience of people around the world to the effects of environmental change a mature area of research in which one might expect the gap between science and policy practice to have been extensively bridged The book presents analysis of past studies interviews conducted with the producers and users of scientific knowledge and case studies performed by leading scholars across a spectrum of international settings and political systems Crucially the authors identify new directions and tools for closing the gap between science and policy across a range of situations and societies The result is an illuminating collection of studies and analyses that suggest to researchers students practitioners and policy makers alike how best to ensure that high quality environmental research informs good environmental policy and practice
