

Executive Summary

Small Cell Infrastructure

Small Cells Deep Dive

Small cells are a type of cellular network equipment that provides high-speed wireless connectivity over a limited geographic area.

They are typically deployed in urban areas to provide additional capacity and coverage where traditional macrocell towers are unable to reach.

Small cells can also be used in rural areas to provide connectivity where there is no access to a traditional cellular network.

Small cells are often deployed in clusters to provide a more efficient and cost-effective way of providing connectivity.

They are also used in conjunction with other types of cellular equipment to provide a more comprehensive network solution.

Small cells are an important part of the future of cellular connectivity and will play a key role in providing connectivity to a growing population.
