Kondratiev, E.E. Nikitin, 2012-12-06 The present monograph appears after the death of Professor V N Kondratiev one of those scientists who have greatly contributed to the foundation of contemporary gas kinetics The most fundamental idea of chemical kinetics put forward at the beginning of the twentieth century and connected with names such as W Nernst M Bodenstein N N Semenov and C N Hinshelwood was that the complex chemical reactions are in fact a manifestation of a set of simpler elementary reactions involving but a small number of species V N Kondratiev was one of the first to adopt this idea and to start investigations on the elementary chemical reactions proper These investigations revealed explicitly that every elementary reaction in turn consisted of many elementary events usually referred to as elementary processes It took some time to realize that an elementary reaction represented in a very simple way by a macroscopic kinetic equation can be described on a microscopic level by a generalized Boltzmann equation Nevertheless up to the middle of the twentieth century gas kinetics was mainly concerned with the interpretation of complex chemical reactions via a set of elementary reactions But later on the situation changed drastically First the conditions for reducing microscopic equations to macroscopic ones were clearly set up These are essentially based on the fact that the small perturbations of the Maxwell Boltzmann distribution are caused by the reaction proper

Homogeneous Gas Reactions presents a general introduction to the subject of kinetics including the basic laws of kinetics and the theoretical treatment of reaction rates This four chapter book deals mainly with homogeneous reactions in the gas phase Chapter 1 presents the kinetic laws based on experimental results in terms of their simple concepts with a special consideration of the way in which rates depend on concentration while Chapter 2 deals with the interpretation of rates in terms of more fundamental theories Chapter 3 covers the overall reactions that are believed to be elementary such as the reaction between hydrogen and iodine the reverse decomposition of hydrogen iodide the corresponding reactions involving deuterium instead of hydrogen and the dimerizations of butadiene and cyclopentadiene as well as a few elementary termolecular reactions all involving nitric oxide This chapter also includes a general account of some of the elementary reactions that occur as steps in more complex mechanisms Chapter 4 examines the reaction rates of numerous complex gas reactions Undergraduate physical chemistry and chemical kinetics students as well as advanced students in other fields such as biology and physics will find this book invaluable      **Dynamics of Surfaces and Reaction Kinetics in Heterogeneous Catalysis**

G.F. Froment, K.C. Waugh, 1997-09-03 Many processes of the chemical industry are based upon heterogeneous catalysis Two important items of these processes are the development of the catalyst itself and the design and optimization of the reactor Both aspects would benefit from rigorous and accurate kinetic modeling based upon information on the working catalyst gained from classical steady state experimentation but also from studies using surface science techniques from quantum chemical calculations providing more insight into possible reaction pathways and from transient experimentation dealing with reactions and reactors This information is seldom combined into a kinetic model and into a quantitative description of the process Generally the catalytic aspects are dealt with by chemists and by physicists while the chemical engineers are called upon for mechanical aspects of the reactor design and its control The symposium Dynamics of Surfaces and Reaction Kinetics in Heterogeneous Catalysis aims at illustrating a more global and concerted approach through a number of prestigious keynote lectures and severely screened oral and poster presentations      **Reaction Kinetics and the**

**Development and Operation of Catalytic Processes** G.F. Froment, K.C. Waugh, 2001-04-03 Reaction Kinetics and the Development and Operation of Catalytic Processes is a trendsetter The Keynote Lectures have been authored by top scientists and cover a broad range of topics like fundamental aspects of surface chemistry in particular dynamics and spillover the modeling of reaction mechanisms with special focus on the importance of transient experimentation and the application of kinetics in reactor design Fundamental and applied kinetic studies are well represented More than half of these deal with transient kinetics a new trend made possible by recent sophisticated experimental equipment and the

awareness that transient experimentation provides more information and insight into the microphenomena occurring on the catalyst surface than steady state techniques The trend is not limited to purely kinetic studies since the great majority of the papers dealing with reactors also focus on transients and even deliberate transient operation It is to be expected that this trend will continue and amplify as the community becomes more aware of the predictive potential of fundamental kinetics when combined with detailed realistic modeling of the reactor operation

*Introduction to Non-linear Kinetics in Heterogeneous Catalysis* Yuri I. Pyatnitsky, Nina I. Ilchenko, 2000 This book comprises seven chapters The first chapter addresses a phenomenological approach to the concept reaction rate which views the complex reaction as a single unit whose progress is judged from measurements of the formation rates of the reaction participants it also sets forth the main strategies by which to determine the rates of heterogeneous catalytic reactions Another approach a mechanistic one relying upon the reaction mechanisms considered in the second chapter that has recourse to the Horiuti Temkin complex reaction kinetics theory and the elementary statement of the graph method application in chemical kinetics The third fourth and fifth chapters consistently expound the philosophy of the steady state multiplicity auto oscillations and the reciprocal effect of competitive catalytic reactions The sixth and seventh chapters concentrate on the kinetics of some pragmatically important heterogeneous and homogeneous catalytic reactions Most results presented in these chapters were obtained in the authors laboratories
