Elementary Science Methods A Constructivist Approach:

Elementary Science Methods David Jerner Martin, 2003 This text's unique approach guides students in learning by doing. Geared to teachers of preschool through sixth grade students it represents the cutting edge of elementary science teaching with investigations into contemporary topics. Access to InfoTrac College Edition will enhance student understanding.

Elementary Science Methods: A Constructivist Approach David Jerner Martin, 2008-01-31 As the groundbreaking text that pioneered a constructivist approach to elementary science teaching **ELEMENTARY SCIENCE METHODS A CONSTRUCTIVIST APPROACH** Fifth Edition is based on two fundamental and complementary ideas: it is more important for children to learn how to do science than to learn about science and elementary science teachers do not need to know a great deal of science but rather should be co-inquirers with their students. This text features a wealth of exercises including open-ended inquiry activities that help teacher candidates construct their own personal conceptualizations about science content and teaching methods. More than 170 process-oriented open-ended activities organized by grade level are suggested to encourage children to develop and perform their own investigations. The Book Companion DVD available separately provides valuable tools and resources such as additional activities and video clips that students can use both in their college course and later in elementary science classrooms. All activities and much of the text content are clearly linked to National Science Education Standards (NSES) for content, professional development, assessment, and teaching, and they contain suggestions of appropriate children's literature to encourage interdisciplinary learning. Elementary Science Methods: A Constructivist Approach David Martin, 2005-07-22 In this pioneering text, Martin uses a constructivist approach to guide students in learning how to teach in a constructivist manner. Grounded in the belief that it is more important for children to learn how to do science than it is for them to learn about science, this text is predicated on the reality that teachers of elementary science do not need to know a great deal of science to be good science teachers but need to be co-inquirers with their students. To facilitate your students' learning, this text features a wealth of exercises for teacher candidates; the book includes open-ended inquiry activities that help them to construct their own personal conceptualizations about science content and teaching science in the elementary school, and it contains over 170 process-oriented open-ended activities that teachers can use to encourage children to develop and perform their own investigations. The Book Companion CD-ROM included with each new copy provides tools and resources such as additional activities and video which students can use both in their college course and later in elementary science classrooms. All activities are linked to National Science Education Standards for content, professional development, assessment, and teaching, and the activities contain suggestions of appropriate children's literature.
