Ince, 2012-12-06 Among the space activities of the last three decades satellite communications SATCOM has found the widest
application in meeting both civil and military communications requirements Several international regional and national
SATCOM systems of increasing capacity capability and complexity have been and are being implemented over the years The
latest versions are utilizing such concepts as spot beams processing transponders in SS TDMA and operations in different
frequency bands including the EHF band On the military side the United States of America the United Kingdom France and
NATO the North Atlantic Treaty Organisation have been the only owners and operators of military SATCOM systems in the
West The systems in being and under development use satellites and ground terminals with characteristics which differ from
the civilian ones with respect to frequency bands utilised and survivability and interoperability The SATCOM has given the
military users the potential of having much needed mobility flexibility and survivability in strategic and tactical
communications for land sea and air operations It must however be said particularly for the military SATCOM systems that
they have been evolved in big jumps both in time and capability each jump involving the deployment of two or three often
specially designed large satellites large expenses and rather traumatic transition between jumps Despite these undesirable
features these systems did not have the required degree of survivability and flexibility **Elements of Digital Satellite

SATELLITE COMMUNICATION MONOJIT MITRA, 2005-01-01 This compact text provides a thorough readable treatment
of the principles of satellite communication and its various technologies and components It presents a clear analysis of
subsystems of satellites orbital mechanisms launching mechanisms earth and space systems employed in satellite links and
analog and digital communication through satellites Besides it explains the different methods used to access the various
services provided by a satellite The text avoids complicated mathematical derivations but the results of these derivations and
their references are used throughout the book when required for understanding the technical concepts Primarily intended as
a textbook for undergraduate students of electronics and communication engineering telecommunication engineering and
information technology this easy to understand book will also be useful as a reference for professional engineers
