Elements of Optical Mineralogy: Determinative tables Newton Horace Winchell, Alexander Newton Winchell, 1929
Elements of Optical Mineralogy Alexander Newton Winchell, 1929 **Elements of Optical Mineralogy: Principles and methods. 3d ed., rev. and enl.- pt. II. Descriptions of minerals. 3d ed.- pt. III. Determinative tables. 2d ed., 2d print** Alexander Newton Winchell, 1928 **Rock-forming Minerals in Thin Section** Hans Pichler, Cornelia Schmitt-Riegraf, 2012-12-06 Identification of rock forming minerals in thin section is a key skill needed by all earth science students and practising geologists This translation of the completely revised and updated German second edition by Leonore Hoke Institute of Geological and Nuclear Sciences New Zealand provides a comprehensive guide to identifying 140 of the most important rock forming mineral species The book is divided into three main parts Part A is a practical guide to the fundamentals of crystal optics polarization microscopy and the practical use of microscopes Part B gives a detailed description of the characteristic optical features special features and the paragenesis of the most common rock forming minerals This well illustrated part is divided into opaque minerals isotropic uniaxial and optical biaxial mineral groups Part C contains identification tables for the minerals and diagrams showing the international classification of magmatic rocks as well as a colour plate section showing crystal forms of minerals The book will provide an invaluable guide to all undergraduate earth scientists as well as to professional geologists requiring an overview of mineral identification in thin section *Elements of Optical Mineralogy: Descriptions of minerals* Newton Horace Winchell, Alexander Newton Winchell, 1927 **Geology and Ore Deposits of the Kern River Uranium Area, California** Edward Malcolm MacKevett, 1960 This report concerns work done on behalf of the U S Atomic Energy Commission and is published with the permission of the Commission **Geological Survey Bulletin**, 1965 Geology of the Garo Uranium-vanadium Copper Deposit, Park County, Colorado Verl Richard Wilmarth, 1959 This report concerns work done on behalf of the U S Atomic Energy Commission and is published with the permission of the Commission **Publications of Goddard Space Flight Center** Goddard Space Flight Center, 1965 *Systematic Materials Analysis* J. H. Richardson, R. V. Peterson, 2013-10-22 Systematic Materials Analysis Volume III presents brief discussions on a broad range of instrumental methods and approaches that will yield the desired information about a given material The book discusses the selection of analytical methods on the bases of specimen limitations and information desired The chapters on specific instruments briefly outline the theories of operation and describe the capability of the methods for qualitative and quantitative measurements of chemical composition structure and texture as applicable The commercial instruments and techniques discussed include arc spark laser plasmas flame photometry gas analysis techniques combustion methods gas chromatography and ion scattering spectrometry The Mossbauer spectrometry optical microscopy x ray diffraction x ray fluorescence and absorption spectrometry are also encompassed Materials analyst materials scientist chemists and engineers will find the book invaluable

Geology of the High Climb Pegmatite, Custer County, South Dakota Douglas M. Sheridan, 1955 **Fluorspar Deposits Near Meyers Cove, Lemhi County, Idaho** D. C. Cox, 1954 The fluorspar deposits near Meyers Cove Lemhi County Idaho are localized along three groups of shear zones one group strikes northeast and dips steeply northwestward another strikes northeast and dips gently northwestward and the third strikes northwest and dips gently southwestward The country rocks are tuffs and flows of the Casto volcanics of Permian age and the Challis volcanics of late Oligocene or early Miocene age The known deposits are in a belt about 3 miles long and 2 miles wide and crop out at altitudes between 5 100 feet and 7 200 feet above sea level The principal vein minerals are fluorite chalcedony and barite The fluorite occurs as lodes crusts around fragments of rock and replacements of fine breccia The lodes range in size from veinlets to vein zones several hundred feet long and as much as 20 feet wide and contain ore that ranges in grade from 40 percent to 85 percent CaF_2 the average grade is about 50 percent CaF_2 Bibliography of the Geology of the Western Phosphate Field Robert A. Harris, 1954

Identification of Materials Anton A. Benedetti-Pichler, 2012-12-06 This book has been written for the practicing chemist whose occasional task may be qualitative analysis It deals with the investigation of things as they are without any limitations to the scope It emphasizes the identification of materials inorganic organic organized biological common rare described or not described in the accessible literature as they actually occur in nature and industry or are met in the investigation of mishaps and crime The description of techniques macro to submicro and the practice exercises have been included since the teaching of these arts is rarely a part of academic curricula and it happens with increasing frequency that chemists have to acquire them on the job In the systematic procedure given emphasis is placed upon the investigation of minute specimens and upon acute reasoning that continuously weighs all accumulating evidence The work begins with the consideration of the history of the material under investigation Especially when specks of all organic substance shall be identified it should be realized that the discovery of the source and consequently of the possibilities involved may be the most valuable clue to an efficient solution of the problem *Information Circular*, 1925 **Bulletin of the United States**

Geological Survey, 1956 Crystal Identification with the Polarizing Microscope R.E. Stoiber, S.A. Morse, 2012-12-06 Some of the simpler measurements of optical mineralogy are so precise and powerful that they give satisfaction to beginning students Not long after mastering the strike and dip of rock surfaces with the Brunton compass many geology students are able to determine precisely the identity of quartz or the anorthite content of plagioclase or the magnesium ratio of pyroxene with the polarizing or petrographic microscope by means of measuring refractive index to better than one part in a thousand Very little training and almost no theory are needed to achieve these skills But there inevitably comes a time when theory is needed either to get on with the art or simply to reconstruct from first principles what is going on when rote memory fails In this book we hope to provide both the rote methods and the theoretical background for practitioners at all levels of experience We draw from several careers ours our colleagues and our students in teaching the subject at various levels of

sophistication Our book is intended to serve the needs of industrial and forensic scientists as well as petrographers who deal with rocks Much of our treatment is based on new research both in matters of presentation and in the optical determination of minerals and other materials *Information Circular* United States.
