**Advanced Electromagnetic Wave Propagation Methods** Guillermo Gonzalez, 2021-11-16 This textbook provides a solid foundation into many approaches that are used in the analysis of advanced electromagnetic wave propagation problems. The techniques discussed are essential to obtain closed form solutions or asymptotic solutions and meet an existing need for instructors and students in electromagnetic theory. The book covers various advanced mathematical methods used in the evaluation of the electromagnetic fields in rectangular, cylindrical, and spherical geometries. The mathematics of special functions, i.e., Bessel, Hankel, Airy, Legendre, Error, etc., are covered in depth, including appropriate Appendices. The author takes particular care to provide detailed explanations of auxiliary potentials, Hertz's vectors, Debye potentials, as well as the use of Green functions, the Watson transformation, and the method of steepest descent in the solution of electromagnetic problems. Overall, *Advanced Electromagnetic Wave Propagation Methods* is a good source for the many skills required in obtaining closed form and asymptotic solutions which in many instances cannot be obtained using computer codes of Maxwell's equations. Thus, it provides an excellent training for preparing graduate students in their research work. This book is intended for a graduate course in electromagnetic theory for students in electrical engineering. Students in physics and professionals will also find it appropriate and useful. Provides a comprehensive and unified treatment of radiation and propagation problems. Presents a detailed explanation in the use of Green functions, the Watson transformation, and the method of steepest descent as they apply to electromagnetic problems. Demonstrates various advanced mathematical techniques used in the evaluation of the

electromagnetic fields Details how to formulate and obtain a closed form solution or an asymptotic solution Includes appendices for Bessel Legendre Airy and Error functions      *Applications of Learning & Planning Methods* Nikolaos G. Bourbakis,1991 Learning and planning are two important topics of artificial intelligence Learning deals with the algorithmic processes that make a computing machine able to learn and improve its performance during the process of complex tasks Planning on the other hand deals with decision and construction processes that make a machine capable of constructing an intelligent plan for the solution of a particular complex problem This book combines both learning and planning methodologies and their applications in different domains It is divided into two parts The first part contains seven chapters on the ongoing research work in symbolic and connectionist learning The second part includes seven chapters which provide the current research efforts in planning methodologies and their application to robotics      *Probabilistic Methods and Distributed Information* Rudolf Ahlswede,2018-12-31 The fifth volume of Rudolf Ahlswede s lectures on Information Theory focuses on several problems that were at the heart of a lot of his research One of the highlights of the entire lecture note series is surely Part I of this volume on arbitrarily varying channels AVC a subject in which Ahlswede was probably the world s leading expert Appended to Part I is a survey by Holger Boche and Ahmed Mansour on recent results concerning AVC and arbitrarily varying wiretap channels AVWC After a short Part II on continuous data compression Part III the longest part of the book is devoted to distributed information This Part includes discussions on a variety of related topics among them let us emphasize two which are famously associated with Ahlswede multiple descriptions on which he produced some of the best research worldwide and network coding which had Ahlswede among the authors of its pioneering paper The final Part IV on Statistical Inference under Communication constraints is mainly based on Ahlswede s joint paper with Imre Csiszar which received the Best Paper Award of the IEEE Information Theory Society The lectures presented in this work which consists of 10 volumes are suitable for graduate students in Mathematics and also for those working in Theoretical Computer Science Physics and Electrical Engineering with a background in basic Mathematics The lectures can be used either as the basis for courses or to supplement them in many ways Ph D students will also find research problems often with conjectures that offer potential subjects for a thesis More advanced researchers may find questions which form the basis of entire research programs      *Computational Methods for Electromagnetic and Optical Systems* John M. Jarem,Partha P. Banerjee,2016-04-19 The current rapid and complex advancement applications of electromagnetic EM and optical systems calls for a much needed update on the computational methods currently in use Completely revised and reflecting ten years of developments this second edition of the bestselling *Computational Methods for Electromagnetic and Optical Systems* provides the update so desperately needed in this field Offering a wealth of new material this second edition begins with scalar wave propagation and analysis techniques chiral and metamaterials and photonic band gap structures It examines Poynting vector and stored energy as well as energy group and phase velocities reviews k space state variable formation with applications to anisotropic

planar systems and presents full field rigorous coupled wave analysis of planar diffraction gratings with applications to H mode E mode crossed gratings single and multilayered diffraction grating analysis and diffraction from anisotropic gratings. Later chapters highlight spectral techniques and RCWA as applied to the analysis of dynamic wave mixing in PR materials with induced transmission and reflection gratings and demonstrate the RCWA algorithm to analyze cylindrical and spherical systems using circular bipolar cylindrical and spherical coordinates. The book concludes with several RCWA computational case studies involving scattering from spatially inhomogeneous eccentric circular cylinders solved in bipolar coordinates. Many of these examples apply the complex Poynting theorem or the forward scattering optical theorem to validate numerical solutions by verifying power conservation. Using common computational tools such as Fortran, MATLAB, COMSOL and RSOFT, the text offers numerous examples to illuminate the material, many of which employ a full field vector approach to analyze and solve Maxwell's equations in anisotropic media where a standard wave equation approach is intractable. Designed to introduce novel spectral computational techniques, the book demonstrates the application of these methods to analyze a variety of EM and optical systems.

Electromagnetic Methods in Applied Geophysics Misac N. Nabighian, 1988. As a slag heap the result of strip mining creeps closer to his house in the Ohio hills, fifteen year old M.C. is torn between trying to get his family away and fighting for the home they love.

**Computational Methods for Electromagnetic and Optical Systems, Second Edition** John M. Jarem, Partha P. Banerjee, 2011. This text examines a variety of spectral computational techniques including k space theory, Floquet theory and beam propagation that are used to analyze electromagnetic and optical problems. The authors tie together different applications in EM and optics in which the state variable method is used. Emphasizing the analysis of planar diffraction gratings using rigorous coupled wave analysis, the book presents many cases that are analyzed using a full field vector approach to solve Maxwell's equations in anisotropic media where a standard wave equation approach is intractable.

**Boundary Element Methods for Electrical Engineers** Dragan Poljak, C. A. Brebbia, 2005. Presents Boundary Element Method (BEM) in a simple fashion in order to help the beginner to understand the very basic principles of the method. This book initially derives BEM for the simplest potential problems and subsequently builds on these to formulate BEM for a wide range of applications in electromagnetics.

**Free Space Optical Networks for Ultra-Broad Band Services** Stamatios V. Kartalopoulos, 2011-08-23. This book provides a comprehensive description of an optical communications technology known as free space optical, a next generation communications network that uses optical signals through the atmosphere instead of fiber, RF or microwaves. This technology potentially offers more complex ultrabandwidth communication services simultaneously to multiple users and in a very short time compared to fiber optic technology. This text presents established and new advancements drawn from the latest research and development in components, networking operation and practices. This book describes the FSO network concepts in simple language. It provides comprehensive coverage in an easy to understand progressive style that starts from the physics of the atmosphere.

and how it affects optical communications continues with the design of a network node and concludes with fiberless network applications from point to point to mesh topology Important areas discussed include Propagation of light in the atmosphere and phenomena that affect light propagation FSO transceiver design Point to point FSO systems Ring FSO systems Mesh FSO systems and integrating the Mesh FSO with the public network WDM Mesh FSO FSO network security FSO specific applications To meet the needs of both academia and industry key mathematical formulas are presented along with descriptions while extensive mathematical analyses are minimized or avoided Free Space Optical Networks for Ultra Broad Band Services serves as an ideal text for network communication professionals who enter the free space optical communication field graduate students majoring in optical communications optical communication engineers researchers managers and consultants
