Frei Otto:

The Work of Frei Otto Frei Otto, Ludwig Glaeser, Museum of Modern Art (New York, N.Y.), 1972 A Conversation with Frei Otto Frei Otto, Juan Maria Songel, 2010-08-18 One of the twentieth century's most important design visionaries German architect and structural engineer Frei Otto b 1925 made his mark with a series of super light tensile structures such as the West German Pavilion for Montreal's Expo 67 and the Olympic Stadium in Munich 1972 that are celebrated for their technical ingenuity and material efficiency Yet despite Otto's achievements relatively little has been published on his work A Conversation with Frei Otto features a comprehensive interview with Otto as well as his critical text Fundamentals of a Future Architecture in its entirety In his conversation with Juan Maria Songel Otto talks freely about everything from his early connections to the Bauhaus to his thoughts on the current state of engineering and architecture The latest in our Conversations series this book also includes images of Otto's most important and well known works **The Work of Frei Otto and His Teams 1955-1976**, 1978 Widespan Roof Structures Michael Barnes, Michael Dickson, 2000 Presents world thinking on the design and construction of large covered spaces This book aims to offer insights into many of the innovative construction design projects It explores the advances within stressed membrane roofing atria and glass structures with a focus on international developments It also addresses the problems of construction Frei Otto Philip Drew, 1976 **Kisho Kurokawa** Dennis Sharp, 2002 Known as the Big Eye the Oita Stadium is one of the chosen venues for the next World Cup in 2002 It will be reused for the second stage of the Japan Inter Prefectural Athletic Competition in 2008 after the World Cup continuing to grow in the future to become a large scale all purpose sports park for Oita The whole site covers an area of 225 ha and has several facilities outside the main football stadium These include general fitness training and lodging centres a botanical pool two multipurpose athletic fields two rugby and soccer practise pitches a softball field tennis courts and other game areas The main stadium features an open track for athletic events as well as the football pitch It can also be used year round for public events aided by its retractable roof For soccer matches spectator seats are placed right up to the edge of the pitch to bring them close to the action To change over for track events a retractable seating system was developed The stadium sits elegantly on its site enhanced by the gentle curves of its spherical design The choice of the sphere Kurokawa says is an expression of abstract symbolism This spherical shape also enables the retractable portion to move along its curved surface The use of Teflon membrane panels with 25 percent light permeability obviates the need for artificial lighting during daylight hours In order for the pitch to get proper exposure to sunlight the elliptical roof opening runs along the north south axis A main arch with perpendicular horizontal sub members follows the elliptical shape of the roof opening Between the roof and the spectator seating below the surrounding mountains can be seen from a slender ventilation clearstorey set just below the roof line This slit of space is designed to create a feeling of openness inside the stadium Since the original design an idea emerged for a moving camera to be located on the main beam to deliver special dynamic images for television

audiences around the world *History of Architectural Theory* Hanno-Walter Kruft, 1994 As the first comprehensive encyclopedic survey of Western architectural theory from Vitruvius to the present this book is an essential resource for architects students teachers historians and theorists Using only original sources Kruft has undertaken the monumental task of researching organizing and analyzing the significant statements put forth by architectural theorists over the last two thousand years The result is a text that is authoritative and complete easy to read without being reductive Digital Cities Neil Leach, 2009-08-31 Guest edited by Neil Leach What is the impact of digital technologies on the design and analysis of cities For the last 15 years the profound impact of computer aided techniques on architecture has been well charted From the use of standard drafting packages to the more experimental use of generative design tools and parametric modelling digital technologies have come to play a major role in architectural production But how are they helping architects and designers to operate at the urban scale And how might they be changing the way in which we perceive and understand our cities Features some of the world's leading experimental practices such as Zaha Hadid Architects R Sie n Biothing and Xefirotarch Takes in exciting emerging practices such as moh architects kokkugia and THEVERYMANY and work by students at some of the most progressive schools such as the AA Dessau Institute of Architecture and RMIT Contributors include Michael Batty Benjamin Bratton Alain Chiaradia Manuel DeLanda Vicente Guallart and Peter Trummer **Transparent Plastics** Simone Jeska, 2007-10-05 A fascinating guide to building with transparent plastics Prominent international avant garde architects such as Shigeru Ban and Herzog de Meuron frequently use transparent plastic for their structures Transparent plastic seems ephemeral and thus captures the spirit of the times **An Introduction to Architectural Theory** Harry Francis Mallgrave, David J. Goodman, 2011-03-16 A sharp and lively text that covers issues in depth but not to the point that they become inaccessible to beginning students An Introduction to Architectural Theory is the first narrative history of this period charting the veritable revolution in architectural thinking that has taken place as well as the implications of this intellectual upheaval The first comprehensive and critical history of architectural theory over the last fifty years surveys the intellectual history of architecture since 1968 including criticisms of high modernism the rise of postmodern and poststructural theory critical regionalism and tectonics Offers a comprehensive overview of the significant changes that architectural thinking has undergone in the past fifteen years Includes an analysis of where architecture stands and where it will likely move in the coming years Automatic Architecture Sean Keller, 2018-02-12 In the 1960s and 70s architects influenced by recent developments in computing and the rise of structuralist and poststructuralist thinking began to radically rethink how architecture could be created Though various new approaches gained favor they had one thing in common they advocated moving away from the traditional reliance on an individual architect's knowledge and instincts and toward the use of external tools and processes that were considered objective logical or natural Automatic architecture was born The quixotic attempts to formulate such design processes extended modernist principles and tried to draw architecture

closer to mathematics and the sciences By focusing on design methods and by examining evidence at a range of scales from institutions to individual buildings Automatic Architecture offers an alternative to narratives of this period that have presented postmodernism as a question of style as the methods and techniques traced here have been more deeply consequential than the many stylistic shifts of the past half century Sean Keller closes the book with an analysis of the contemporary condition suggesting future paths for architectural practice that work through but also beyond the merely automatic

The Architecture of Continuity Lars Spuybroek, 2008 That buildings are made of elements doesn't mean that architecture should be based on elementarism on the contrary we should strive for an architecture of continuity that fuses tectonics with textile abstraction with empathy and matter with expressivity This is the crux of the argument Lars Spuybroek makes in this book the first fully theoretical account of his innovative work The state of contemporary architecture is the product of a 150 year battle between the Polytechnique and Beaux Arts schools of design which has forced us into a stalemate between the radically opposed positions of high tech and sculpturism Spuybroek aims to do no less than mend this rift through rethinking technology as an extension of our feeling senses materiality as the realm of activity and agency and structure as the result of genesis Building on Gottfried Semper's materialist theory of architecture he takes us from a philosophy of technology to a surprisingly historical argumentation that constantly revives the words of John Ruskin William Hogarth and Wilhelm Worringer Alongside a number of essays the book contains extensive conversations in which we witness him refining and sharpening his arguments We will see a merging of Art Nouveau and Bauhaus where empathy has been liberated from manual labor and machines have been liberated from uniform repetition In a period of theoretical tranquility in architecture this book takes a refreshing turn back to the basics one in which tools methodology and architectural aesthetics are recalibrated

The 1972 Munich Olympics and the Making of Modern Germany Kay Schiller, Christopher Young, 2010 The 1972 Munich Olympics were intended to showcase the New Germany and replace lingering memories of the Third Reich In this cultural and political history of the Munich Olympics the authors set these games into both the context of 1972 and the history of the modern Olympiad
