**Freight Flows and Spatial Aspects of the British Economy** Michael Chisholm, Patrick O'Sullivan, 2009-06-04

Originally published in 1973 this book reports experiments in the modelling of freight flows in Great Britain on the basis of 78 origin destination zones covering the entire country Its central purpose is to establish whether gravity model or linear programming approaches provide the most appropriate way of describing the existing spatial distribution of freight volumes and hence of predicting future flows given possible allocations of population Linear programming appears to be the most useful way to approach freight modelling on this scale The model outputs allow the authors to probe the problem of regional comparative advantage in terms of the volume of transport inputs Although there is some association with the accessibility of regions it is not true that the peripheral areas are at a serious disadvantage Furthermore evidence on the structure of transport costs indicates that movement costs are a surprisingly low proportion of total transport costs thus further reducing the effects of location The study concludes with a review of the lines along which work might proceed     **Transport**

Johnston, Michael Williams, 2022-09-11 These essays trace the evolution of British geography as an academic discipline during the last hundred years and stress how the study of the world we live in is fundamental to an understanding of its problems and concerns Never before has such an ambitious and wide ranging review been attempted and never before has it been done with so much knowledge and passion The principal themes covered in this volume are those of environment place and space and the applied geography of map making and planning The volume also addresses specific issues such as disease urbanization regional viability and ethics and social problems This lively and accessible work offers many insights into the minds and practices of today's geographers     *International Symposium on Theory and Practice in Transport Economics Key Issues for Transport beyond 2000 15th International Symposium on Theory and Practice in Transport Economics, Thessaloniki, Greece, 7th - 9th June 2000* European Conference of Ministers of Transport, 2002-06-07 A clear dichotomy exists between an European economy centred on international trade and the environmental damage to which this focus gives rise There is a need for a novel approach based on a shift away from the goal of ever faster travel and     *Progress in Industrial Geography*

Ian Hodder, Clive Orton, 1976-10-14 This 1976 text is a pioneering study in the applications to archaeology of modern statistical and quantitative techniques The authors show how these techniques when sensitively employed can dramatically extend and refine the information presented in distribution maps and other analyses of spatial relationships Techniques of interpretation by inspection can now be made more powerful and rigorous at the same time interest has turned from the examination of such sites and artefacts as things to the spatial relationships between such things their relationships to one another and to landscape features soils and other resources This book was the first to apply the available techniques systematically to the special problems and interests of archaeologists It also demonstrates to geographers and other social scientists who may be familiar with analogous applications in their own fields the exciting interdisciplinary developments this facilitates for example in studies of exchange networks trade and settlement patterns and cultural history      **Urban Transport Economics**

Hensher,1977-07-07      Geographical Change and Industrial Revolution John Langton,1979-12-20 The economic changes of the industrial revolution came to different parts of England at different times By examining the geography of these changes this book shows how the pattern of production in an important coalfield changed as it became part of the regional economic system developing around the port of Liverpool In the first part of the book the author develops a model for studying the geography of economic change by combining the economic location theory of August Losch with concepts from systems theory He concludes that normative theories possess great value in allowing an ordered description of the process of growth if not an explanation of it The theoretical model allows the author to analyse the complex process of change in the coalfield The combination of theoretical enquiry and detailed archival work provides a thorough account of the transformation of an important industry In doing so the book casts considerable light on the process of regional economic development in the English industrial revolution      *Modelling Freight Transport* Lorant Tavasszy, Gerard De Jong,2013-10-11 Freight Transport Modelling is a unique new reference book that provides insight into the state of the art of freight modelling Focusing on models used to support public transport policy analysis Freight Transport Modelling systematically introduces the latest freight transport modelling approaches and describes the main methods and techniques used to arrive at operational models As freight transport has grown exponentially in recent decades policymakers now need to include freight flows in quantitative evaluations of transport systems Whereas early freight modelling practice was inspired by passenger transport models by now it has developed its separate stream of methods and techniques inspired by disciplines such as economic geography and supply chain management Besides summarizing the latest achievements in fundamental research this book describes the state of practice and advises practitioners on how to cope with typical challenges such as limitations in data availability Uniquely focused book exploring the key issues and logistics of freight transport modelling Highlights the latest approaches and describes the main methods and techniques used to arrive at operational models Summarizes fundamental research into freight transport modeling as well as current practices and advice for practitioners facing day to day challenges
