**Farming Freshwater Prawns** Michael B. New, Food and Agriculture Organization of the United Nations, 2002-01-01 This manual is an up to date practical guide to the farming of *Macrobrachium rosenbergii* Many of the techniques described are also applicable to the culture of other species of freshwater prawns The principle target audience is farmers and extension workers but it is also hoped that it will be useful for aquaculture lecturers and students After a preliminary section on the biology of freshwater prawns the manual covers site selection for hatcheries nurseries and grow out facilities and the management of the broodstock hatchery nursery and grow out phases of rearing Harvesting and post harvest handling are also covered and there are some notes on marketing freshwater prawns The reference and bibliography section contains a list of relevant reviews as well as other manuals on general aquaculture themes such as water and soil management topography pond construction and simple economics The management principles described are illustrated by photographs and drawings The manual contains annexes on specific topics such as the production of larval feeds size variation and stock estimation The final annex is a glossary that lists not only the terms used in the manual itself but also those which may be found in other documents

*Freshwater Prawn Farming* Michael B. New, 1982 This book has

been prepared on the basis of Thai experience in the farming of the giant freshwater prawn *Macrobrachium rosenbergii*. It has a practical orientation as it was written for extension and fishery officers as well as for practising aquaculturists willing to start freshwater prawn farming. The farming of this prawn is of recent origin but is spreading very rapidly in several countries which followed the well divulged example of Hawaiian prawn farmers. At the time in which this manual was written, Thailand had taken the world leadership in terms of production as the result of an active long term involvement of both the official and private sectors. Since there is already a great deal of mainly scientific literature on this species, this manual was conceived to fill a gap in the existing literature in order to provide information on how to go about *M. rosenbergii* farming, answering the numerous requests from member Governments to FAO. It contains some general information on the biology of the species and much more detailed information on larval rearing and pond culture. The Thai practice forms the core of the manual but reference to other alternative techniques used elsewhere is given as well as additional literature reference relevant to each topic dealt with in the text for readers willing to enlarge their knowledge. Annexes on water filtration, nutrition of larvae, description of the various larval stages, ponds, feeds, seine set design, stock estimation and management strategy for Continuous culture technique are also provided as well as a glossary of scientific and technical terms used in the main text.
