Freud's Mass Psychology C. Surprenant, 2002-12-06 Freud s Mass Psychology examines one of the key concepts in the theory of the psyche Surprenant treats it as an epistemological issue rather than exclusively as a socio political issue Focusing on this neglected concept enables the author to raise anew the question of the application of psychoanalysis beyond a mechanistic understanding of this term and of Freud s writings This study brings together important topics associated with psychoanalysis recent French philosophy and political thought The original arguments that it develops should interest anyone preoccupied with the relevance of psychoanalytic concepts in philosophy and in related disciplines notably in the field of literary studies

The Missed Conversation Bettina Bergo, 2025-08-15 Many of the new trends in the philosophy of mind are little over a generation old They could hardly have come about without the crucial scientific and philosophical innovations forged between 1890 and 1935 During that revolutionary period important thinkers aspired to describe dynamic processes and unearth the genetic foundations of their disciplines They addressed the question of consciousness and bodily intelligence seeking a way past inherited versions of mind body dualism Early neurological and phenomenalist models would more than influence computationalism connectionism and enactivist approaches to consciousness representations and judgments memory and even lived intersubjectivity They constitute the first act in the complex drama ongoing today The Missed Conversation thus enacts a conversation among others between Freud the neurologist and Husserl in his pursuit of the embodied depths of consciousness While they never studied each other the book shows how dynamic neurology and psychology can be set into enlightening dialogue with phenomenology It sheds light on the history of philosophy of mind showing its value to sciences of mind today Without naturalizing phenomenology Bettina

Bergo demonstrates the importance of phenomenology for contemporary computational and enactive inquiry. She argues for the value of a neurologically informed psychology able to expand the descriptive limits of phenomenology while addressing contemporary problems in cognitive science. This groundbreaking work presents the fruit of 20 years of research in phenomenology, the history of neurology, psychoanalysis, and metapsychology. It shows how we might think critically about the history of philosophy of mind, mobilizing a pluralistic approach to embodiment, embeddedness in the world, as well as about the relationship between first and third person standpoints.
