Educational Planning Jacques Hallak, Francoise Françoise Caillods, 2018-10-24 It was in a context of unprecedented economic growth that educational planning developed in the 1960s At the time educational planners were entrusted with orchestrating the tremendous expansion of schooling with the aim of both universalizing education and providing national economies with the qualified manpower needed Such rigid mandatory planning is not suited to today s world but other forms of planning such as policy analysis policy dialog labor market analysis and strategic management are still valid The following is a complete list of reprinted essays collected for this book

The Sociological Dimension of Educational Planning Ladislav Cerych, International Institute for Educational Planning, 1968

International Handbook of the Religious, Moral and Spiritual Dimensions in Education Marian de Souza, Gloria Durka, Kathleen Engebretson, Robert Jackson, Andrew McGrady, 2007-06-04 Traditionally spirituality has resided and been contained within religious frameworks but while the links between the two areas are still acknowledged by many in the contemporary world spirituality is perceived by some as an aspect of human life that is distinct from religion Consequently many are searching for meaning within and without religious traditions today and seeking answers to ethical and moral questions that have been generated by the knowledge and technological explosion One outcome is the renewed interest in the religious spiritual and moral dimensions of education throughout the life cycle This International Handbook presents the research and professional practice of scholars who are daily engaged in the consideration of these dimensions in education The result is a collection of essays which reflects the discipline in all of its internationality as it as today Embedded within the chapters is also an agenda for the

future where the religious moral and spiritual dimensions in education are proposed as an exciting and challenging way forward for educators at all levels in society As well it offers a vision for the emergence of a peaceful and just world

Dialogic Education and Technology Rupert Wegerif, 2007-10-13 Dialogic Education and Technology is about using new technology to draw people into the kind of dialogues which take them beyond themselves into learning thinking and creativity The program of research reported in this book reveals key characteristics of learning dialogues and demonstrates ways in which computers and networks can deepen enrich and expand such dialogues A dialogic perspective is developed drawing upon recent work in communications theory psychology computer science and philosophy This perspective foregrounds the creative space opened up by authentic dialogues Whereas studies of computer supported collaborative learning have tended to see dialogue as a means to the end of knowledge construction the dialogic perspective taken by this book sees dialogue as an end in itself in fact moving learners into the space of dialogue is described as the core aim of education The central argument of the book is that there is a convergence between this dialogic perspective in education and the affordances of new information and communications technology A genuinely dialogic perspective is relatively new to the field of educational technology and there is a considerable amount of interest in this topic amongst researchers who wish to see what extra insights if any a dialogical approach can offer them This is an exciting book that synthesizes clarifies and extends mounting discussions of dialogical thinking related to computer supported education It is not only a delightful personal statement but provokes thought on central issues of CSCL and enters into challenging dialog with the relevant alternative approaches As a result of reading this book I am convinced that we urgently need to open new online spaces for people to understandingly interact with different perspectives and creatively generate new insight and respect for difference Gerry Stahl Executive Editor of the International Journal of Computer Supported Collaborative Learning This book offers a set of lenses which give deep insight into education and the use of technologies for learning The moves between empirical studies theoretical reflections and discussion of the design of learning environments make the book very thought provoking Ideas are not just treated as ideas but they become transformed into principles for design Wegerif is convincing that the use of technology for the creation maintaining and development of dialogical spaces has the potential for transforming and expanding educational experiences in a way which offers a needed vision of learning for the future Sten Ludvigsen Director of the InterMedia Centre for design communication and learning University of Oslo
