**Systems: Theory and Practice** Rudolf Albrecht, 2012-12-06 There is hardly a science that is without the notion of system We have systems in mathematics formal systems in logic systems in physics electrical and mechanical engineering architectural operating information programming systems in computer science management and production systems in industrial applications economical ecological biological systems and many more In many of these disciplines formal tools for system specification construction verification have been developed as well as mathematical concepts for system modeling and system simulation Thus it is quite natural to expect that systems theory as an interdisciplinary and well established science offering general concepts and methods for a wide variety of applications is a subject in its own right in academic education However as can be seen from the literature and from the curricula of university studies at least in Central Europe it is subordinated and either seen as part of mathematics with the risk that mathematicians who may not be familiar with applications define it in their own way or it is treated separately within each application field focusing on only those aspects which are thought to be needed in the particular application This often results in uneconomical re inventing and re naming of concepts and methods within one field while the same concepts and methods are already well introduced and practiced in other fields The fundamentals on general systems theory were developed several decades ago We note the pioneering work of M A Arbib R E Kalman G 1 Klir M D

**Electronic Government** Roland Traunmüller, 2012-02-02 The EGOV Conference Series intends to assess the state of the art in e Government and to provide guidance for research and development in this fast moving field The annual conferences bring together leading research experts and professionals from all over the globe Thus EGOV 2003 in Prague built on the achievements of the 1st EGOV Conference Aix en Provence 2002 which provided an illustrative overview of e Government activities This year the interest even increased nearly 100 contributions and authors coming from 34 countries In this way EGOV Conference 2003 was a reunion for professionals from all over the globe EGOV 2003 brought some changes in the outline and structure of the conference In line with the broadening of the field and a growing number of missions it became necessary to decentralize the reviewing process So reviewing was done via stream chairs who deserve high praise for their dedicated work In addition a workshop part was included to cover some subjects of emerging significance such as dissemination networking and regional developments Further a subtitle of the conference was chosen that would mirror the expansion of e Government to e Governance Consequently in this year's conference governance democratic deliberation and legal issues occupied a growing share Last but not least GIS was incorporated as a topic due to the increasing importance of geographical information systems for planning and operations
