Guidelines For The Management Of Drug Resistant Tuberculosis:

Guidelines for the Programmatic Management of Drug-resistant Tuberculosis World Health Organization, 2008
The emergence of extensively drug resistant strains of tuberculosis especially in countries with a high prevalence of human immunodeficiency virus is a serious threat to global public health and jeopardizes efforts to effectively control the disease. This publication offers updated recommendations for the diagnosis and management of drug resistant tuberculosis in a variety of geographical, economic and social settings and the recording of data that enables the monitoring and evaluation of programs. Publisher's description: Guidelines for the Management of Drug-resistant Tuberculosis Sir John Crofton, 1997

WHO consolidated guidelines on tuberculosis. Module 4 World Health Organization, 2022-04-30. Between 2011 and 2019, WHO has developed and issued evidence-based policy recommendations on the treatment and care of patients with DR TB. These policy recommendations have been presented in several WHO documents and their associated annexes, including the WHO Consolidated Guidelines on Drug Resistant Tuberculosis Treatment issued by WHO in March 2019. The policy recommendations in each of these guidelines have been developed by WHO-convened Guideline Development Groups using the GRADE Grading of Recommendations Assessment Development and Evaluation approach to summarize the evidence and formulate policy recommendations and accompanying remarks. The present WHO Consolidated Guidelines on Tuberculosis Module 4 Treatment Drug Resistant Tuberculosis Treatment includes a comprehensive set of WHO recommendations for the treatment and care of DR TB. The document includes two new recommendations: one on the composition of shorter regimens and one on the use of the BPaL regimen (i.e. bedaquiline, pretomanid, and linezolid). In addition, the consolidated guidelines include existing recommendations on treatment regimens for isoniazid-resistant TB and MDR RR TB, including longer regimens, culture monitoring of patients on treatment, the timing of antiretroviral therapy (ART) in MDR RR TB patients infected with the human immunodeficiency virus (HIV), the use of surgery for patients receiving MDR TB treatment, and optimal models of patient support and care. The guidelines are to be used primarily in national TB programmes or their equivalents in Ministries of Health and for other policy makers and technical organizations working on TB and infectious diseases in public and private sectors and in the community. *Guidelines for the Management of Drug-resistant*
