

Guidelines for the Design of Shield Tunnel Lining

Working Group No. 2, International Tunnelling Association

Abstract—These guidelines, prepared by Working Group 2 (Research) of the International Tunnelling Association, are presented in three parts: Part I describes the outline of the procedure of design. Part II presents the detailed design methods. Part III provides references, including examples of design. Because the methods of designing shield tunnel linings vary, the guidelines do not recommend that priority be given to any one method. Rather, this report presents the basic concepts of shield tunnel linings, in order to provide reference and guidance in designing tunnel linings. © 2000 Published by Elsevier Science Ltd. Preface

Although these guidelines present the basic concepts of shield tunnel lining, they do not supersede relevant specifications relevant to each country and each project. The aim of the guidelines is to promote advances in the design of shield tunnels in accordance with the objectives of the International Tunnelling Association prescribed in Section II of the Statutes of the ITA (ITA 1976).

Work on the guidelines began at the meeting of ITA Working Group 2 – Research in Amsterdam in 1993. After much study, discussion and investigation, the guidelines were completed in December 1999.

The guidelines consist of three parts:

Part I outlines the shield tunnel design procedure.

Part II presents the detailed design methods.

Part III provides references, including examples of shield tunnel design.

Because there are various competent methods of designing shield tunnel linings, these guidelines give no priority to any specific method. Rather, they introduce design methods generally and widely used throughout the world.

Shield tunnels are usually excavated in soft ground rather than in rock. The parameters of linings, such as dimension and strength of material, are subject not only to ground conditions but also to construction conditions.

The practice of designing tunnel linings requires much experience, practical and theoretical knowledge. It is therefore not expected that these guidelines will cover every point of tunnel lining design, but instead will provide basic knowledge useful to design practitioners. It is hoped that this knowledge

will be continuously improved through progress in tunnelling technology.

As Vice-Animateur of ITA Working Group 2, I wish to acknowledge the important contributions of the following persons: M. Yano Leblais, who led the study as Animateur; Professor Andre Assis and Professor E. Eisenstein, who guided our study as Tutors; working group members Herr Dr. Harald Wagner, Professor Teodor Iltis, Dr. Birger Schmidt, Signor Piergiorgio Grassi, all of whom contributed greatly to the study; and members of Research and Development Committee of the Japan Tunnelling Association, chaired by Professor Toru Kondo, who prepared the draft of the guidelines.

For the International Tunnelling Association,

—YOSHINOBU HIRO TAKANO

Vice-Animateur, ITA Working Group 2,

Part I: Outline of Shield Tunnel Lining Design Procedure

Following the planning works for the tunnel, the lining of a shield tunnel is designed according to the following sequence, as a rule:

1. Adherence to specification, code or standard. The tunnel to be constructed should be designed according to the appropriate specification standard, code or standards, which are determined by the persons in charge of the project or decided by discussion between these persons and the designers.
2. Decision on inner dimension of tunnel. The inner diameter of the tunnel to be designed should be decided in consideration of the space that is demanded by the functions of the tunnel. This space is determined by:
 - The construction gauge and car gauge, in the case of railway tunnels;

Engineering and Innovation Meet Archaeology, Architecture and Art* Daniele Peila,Giulia Viggiani,Tarcisio Celestino,2019-04-17 Tunnels and Underground Cities Engineering and Innovation meet Archaeology

Architecture and Art contains the contributions presented at the World Tunnel Congress 2019 Naples Italy 3-9 May 2019. The use of underground space is continuing to grow due to global urbanization, public demand for efficient transportation and energy saving, production and distribution. The growing need for space at ground level along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. This vision was the source of inspiration for the design of the logos of both the International ITA and Italian SIG Tunnelling Association. By placing key infrastructures underground, the black circle in the logos, it will be possible to preserve and enhance the quality of the space at ground level, the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics and quality of life and adaptability to future and varied functions. The 700 contributions cover a wide range of topics from more traditional subjects connected to technical challenges of design and construction of underground works with emphasis on innovation in tunneling engineering to less conventional and archetypically Italian themes such as archaeology, architecture and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction, Environment, sustainability in underground construction, Geological and geotechnical knowledge and requirements for project implementation, Ground improvement in underground constructions, Innovation in underground engineering materials and equipment, Long and deep tunnels, Public communication and awareness, Risk management, contracts and financial aspects, Safety in underground construction, Strategic use of underground space for resilient cities, Urban tunnels, Tunnels and Underground Cities, Engineering and Innovation meet Archaeology. Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects and others involved in underground planning, design and building around the world and for academics who are interested in underground constructions and geotechnics.

Fibre-reinforced concrete: From design to structural applications FIB - Féd. Int. du Béton, 2016. The FRC 2014 Workshop Fibre Reinforced Concrete from Design to Structural Applications was the first ACI fib joint technical event. The Workshop held at Polytechnique Montreal, Canada, on July 24th and 25th, 2014, was attended by 116 participants from 25 countries and 4 continents. The first international FRC workshop was held in Bergamo, Italy, in 2004. At that time, the lack of specific building codes and standards was identified as the main inhibitor to the application of this technology in engineering practice. Ten years after Bergamo, many of the objectives identified at that time have been achieved. The use of fibre reinforced concrete (FRC) for designing structural members in bending and shear has recently been addressed in the fib Model Code 2010. Steel fibre reinforced concrete (SFRC) has also been used structurally in several building and bridge projects in Europe and North America. SFRC has been widely used in segmental tunnel linings all over the world. Members of ACI 544 and fib TG 4.1 have

been involved in writing code based specifications for the design of FRC structural members More than fifty papers were presented at the Workshop from which forty four were selected for this joint ACI fib publication The papers are organised in the document under six themes Design guidelines and specifications Material properties for design Behaviour and design of beams and columns Behaviour and design of slabs and other structures Behaviour and design of foundations and underground components and finally Applications in structure and underground construction projects
