Sea-Level Change in the Gulf of Mexico Richard A. Davis, 2011-05-18 A must read for Gulf Coast scientists naturalists and residents From Florida to Mexico and along the shores of Cuba the coasts of the Gulf of Mexico are vulnerable to sea level rise because of their fragile and low lying shorelines and adjacent coastal environments In addition to wetlands river deltas beaches and barrier islands millions of people who live and work along the Gulf coast are susceptible to the affects of both intense storms in the short term and a gradual rise in sea level over the longer term While global warming headlines any current discussion of this topic and is

certainly a major factor in sea level change it is not the only factor Earthquakes and other crustal shifts the El Niño La Niña phenomena river impoundment and sedimentation tides and weather can all affect local regional and global sea levels In *Sea Level Change in the Gulf of Mexico* Richard A Davis Jr looks at the various causes and effects of rising and falling sea levels in the Gulf of Mexico beginning with the Gulf's geological birth over 100 million years ago and focusing on the last 20 000 years when global sea levels began rising as the glaciers of the last major ice age melted Davis reviews the current situation especially regarding beach erosion and loss of wetlands and offers a preview of the future when the Gulf Coast will change markedly as the twenty first century progresses Amply illustrated and written in a clear straightforward style *Sea Level Change in the Gulf of Mexico* is a valuable resource for anyone who cares deeply about understanding the past present and future of life along the coast of the Gulf of Mexico
