Enabling Enterprise Transformation Nagy K. Hanna, 2009-12-11 Private enterprises in advanced economies have been learning to use information and communication technology ICT to innovate and transform their processes products services and business models significantly improving productivity and competitiveness Moreover the ICT industry itself has become a major source of job creation and a contributor to economic growth and business transformation A key question today is whether and how developing countries can learn to benefit from the ICT revolution and what roles the government and private sector can play Already a number of

developing countries have been inspired by the example of India and China and are now seeking to jump on the outsourcing bandwagon. Nevertheless, with few exceptions in the developing world, little attention has been paid by policymakers and practitioners to invest systematically and proactively in ICT-enabled growth, poverty reduction, and grassroots innovation. Most communities and small and medium-sized enterprises in developing countries, for example, face multiple constraints to adopting and leveraging this general-purpose technology and lack the capabilities for maximizing its potential. In *Enabling Enterprise Transformation*, Nagy Hanna draws on his rich experience of over 35 years at the World Bank and other aid agencies as a development strategist and ICT policy expert to present the most current research and best practices from around the world to provide practical tools for promoting economic and social transformation through ICT. He assesses various initiatives to develop and diffuse ICT, such as innovation funds, incubators, parks, public-private partnerships, and comprehensive promotion programs. He argues for the strategic options now open for developing countries to participate in ICT production, to deploy ICT to transform industries and services, and to leverage ICT as a new national infrastructure for improving the business environment and enhancing the competitiveness of the whole economy. The challenge for leaders in developing countries is to create such social and institutional dynamics for learning about ICT use and adaptation at many levels. Lessons gained so far from programs to build these social learning and innovation capabilities at the institutional and grassroots levels should be shared among developing countries, and a dialogue among business leaders, policymakers, development agencies, educational institutions, and the general citizenry must be advanced.

e-Transformation: Enabling New Development Strategies Nagy K. Hanna, 2009-11-11. Could information and communication technology (ICT) become the transformative tool for a new style of global development? Could ICT promote knowledge-based innovation, driven and smart, adaptive, participatory development? As countries seek a way out of the present period of economic contraction, they are trying to weave ICT into their development strategies in the same way organizations have learned to use ICT to transform their business models and strategies. This integration offers a new path to development that is responsive to the challenges of our times. In *e-Transformation*, Nagy Hanna identifies the key ingredients for the strategic integration of ICT into national development, with examples from around the world. He draws on his rich experience of over 35 years at the World Bank and other aid agencies to outline the strategic options involved in using ICT to maximize developmental impact, transforming public service institutions, networking businesses for innovation and competitiveness, and empowering communities for social inclusion and poverty reduction. He identifies the key interdependencies in e-transformation and offers a holistic framework to tap network effects and synergies across all elements of the process, including leadership, cyber policies, institutions, human resources, technological competencies, information infrastructure, and ICT uses for government, business, and society. Integrating analytical insights and practical applications across the fields of development, political economy, public administration, entrepreneurship, and technology management, the author candidly argues that e-transformation, like all bold

ideas faces implementation challenges In particular the aspiration reality gap needs to be systematically addressed if ICT enabled innovation and transformation is to become a development practice E transformation is first and foremost about thinking strategically and creatively about the options made possible by the information technology revolution in the context of globalization To this end the author provides tools and best practices designed to nurture innovation select entry points prioritize among competing demands and sequence and scale up He outlines the roles of all participants political managerial entrepreneurial social and technical whose leadership is essential for successful innovation

Financial Engineering in Sustainable Funding of Urban Development in the EU Piotr Idczak, Ida Musiałkowska, 2022-08-22 This theoretically rooted and research based book provides insights on the JESSICA funding model which unlike the traditional non repayable aid focuses on supporting sustainable urban development projects in a repayable and recyclable way Looking through the lens of the JESSICA financial engineering mechanism used in urban transformation it examines the functioning and performance thereof and formulates policy recommendations for the future The aim of this volume is to contribute to a deeper understanding of the JESSICA sustainable funding model by exploring its repayable assistance mechanism to support sustainable urban development projects The authors make several noteworthy contributions to the literature on EU cohesion policy and shed light on the use of the repayable instruments within public interventions while providing for the first time a critical analysis of the JESSICA sustainable funding model from the holistic perspective which is especially relevant for supporting sustainable urban development Financial Engineering in Sustainable Funding of Urban Development in the EU provides policy significant findings that are important for EU cohesion policy in the field of repayable assistance to be reinvested in the long term in urban and regional transformation
