The Importance of Becoming a Medical Educator Anthony Berman, 2020-03-30 It is often assumed that healthcare professionals are effective medical educators simply because they have completed the required courses leading to their degrees As such they are rarely provided with the ongoing support needed to become consistently effective medical teachers Developing effective medical teachers is a complex task that can best be achieved by providing teacher candidates with the understanding and tools they need to become effective Although a thorough knowledge of medicine is necessary to become an excellent medical educator earning a medical degree alone is not enough A variety of factors go into a teacher's effectiveness in any educational setting and most teachers need guidance and practice in order to become effective Among the many topics addressed in this text are teaching learning instructional objectives teacher assessment adult learning theory motivation of adult learners the red flags of ineffective teaching and the difference between equality and equity This book will serve to educate doctors on how to better teach their students and current colleagues and most importantly how to better educate their patients **A**

Curriculum Design, Evaluation, and Teaching in Medical

Education Jochanan Benbassat, 2024-12-06 This concise and challenging examination of medical education aims to discuss curriculum design and evaluation in medical schools and to take a fresh look at current trends in patient care and continuing education teaching methods The ideas and insights provided here are based on the author's long career in clinical practice and teaching medical students and residents Medical education is no exception to the changes at every level in medicine For example the ready access to medical information via the Internet and other media has produced smarter and informed patients Multi specialty hospital practice has replaced the individual doctor patient relationship perhaps compromising patient care to some extent New subjects have been added over the years to medical curricula Nevertheless there has often been a reluctance to remove older topics possibly limiting the medical training course's ability to develop as expected The transition from theories of higher education to the reality of curriculum planning and design is a huge leap An important question is how to translate the mission of higher education in general which has been variably described as a training of reflective individuals who possess both culture and expertise and can master any subject with facility into a coherent teaching program The mission of medical education includes the promotion of professionalism in learners by including courses in medical ethics that have become integral to medical education in the USA However despite the development of standards and competencies related to professionalism there is no consensus on the specific goals of medical ethics education the knowledge and skills expected of learners and the best pedagogical methods and processes for their implementation and assessment A significant contribution to the clinical teaching literature Curriculum Design Evaluation and Teaching in Medical Education should be of interest to a variety of readers including clinical educators administrators health care professionals and especially residency directors
