As Defined by the Learning Disabilities Association of America

Dyscalculia

(also known as number dyslexia)

5 to 10%

of the population

Affects a person's ability to comprehend numbers and memorize math facts.

It is common and often overlooked. You probably know someone who has it. Even some scientists, engineers, and mathematicians have it!

- Seeing how numbers fit and associate together
- Counting
- Recalling math facts like $2 + 4 = 6$
- Memorizing symbols like + and -

Dyslexia

5 to 10%

of the population

Affects a person's ability to read, spell, and write. They often read slowly and make mistakes.

Dyslexia does not mean a lack of intelligence. Many people thrive with it, including actors, elected officials, and entrepreneurs.

It is **NOT** a problem with reading letters backward or changing the order. That is a myth.

May struggle with:

- Sounding out written words
- Spelling
- Reading comprehension
- Word recognition, even with common words
- Learning a foreign language
- Solving mathematical word problems
- May struggle with phonemic and phonological awareness, which is the ability to hear, identify, and change the sound structure of a spoken word (see

Dysgraphia

5 to 20%

of children

May struggle with:

- Forming letters
- Writing with proper grammar
- Spacing letters correctly
- Writing in a straight line
