

SYSTEMATIC INSTRUCTIONAL DESIGN

This study guide is a companion to The Systematic Design of Instruction by Walter Dick, Lou Carey, James O. Carey.

Instructional Design

- Reiser & Dempsey (2007) define instructional design as a "systematic process that is employed to develop education and training programs in a consistent and reliable fashion" (pg. 11).
Reiser, R.A. & Dempsey, J.V. (2007). Trends and issues in instructional design (2nd ed.). Upper Saddle River, NJ: Pearson Education, Inc.

Instructional Design Models

- Instructional design models (or methods) are guidelines (Read: blueprints) that instructional designers follow when creating instruction.
- ADDIE instructional design model
- Systematic Design of Instruction Model (Dick & Carey instructional design model)
- Reeves multimedia design model

Systematic Design of Instruction Model (Dick & Carey Instructional Design Model)

- Based on a systems approach for designing instruction
- Based on a behaviorist perspective of learning

Instructional Triad

Define Instructional Goals (a.k.a. Front-end analysis)

- Refer to figure 2.1 p17
- 1) Conduct performance analysis
- 2) Conduct needs assessment / analysis
- 3) Conduct job analysis
- 4) Identify the instructional goal
 - a) The instructional goal is written as goal statement.
 - b) Goal statement is the broad, general purpose of instruction. Not measurable because it does not clarify exactly what a learner must do or how a learner should perform.
 - A goal may be defined as a general statement of desired accomplishment. It does not specify exactly all of the components or steps or how each step will be achieved on the road to accomplishing the goal.
 - Example Goals: (1) Students will master the procedure of setting up a multiple camera production system (2) Students will understand the concept of basic networking.
- 5) Classify the goal
 - Classify each goal into one of the domains (identify the type of learning outcome specified in goal statement)
 - The type of assessment and instructional strategy will vary

depending upon the learning outcome to be taught. Four types of learning outcomes:

- Intellectual skill goals (Cognitive domain)
 - Concept - identify examples of concepts. E.g. identify architectural style of buildings.
 - Rule - apply rule to solve problem. E.g. compute averages.
 - Problem solving - select and apply a variety of rules to solve problems. E.g. write a business letter.
- Psychomotor skill goals (Psychomotor domain)
 - Goals that require basic motor skills and/or physical movement.
- Attitudinal goals (Affective domain)
 - Goals pertaining to attitudes, appreciations, values, and emotions.
- Verbal information goals (Cognitive domain)
 - Facts and knowledge. E.g. name the capitals of various countries.
 - Cognitive strategy (Cognitive domain)
 - Employ a learning strategy. E.g. use a memorization technique.

Guide To Systematic Instructional Design
