Natural History of the Chicago Region Greenberg takes you on a journey that begins with European explorers and settlers and hasn't ended yet. Along the way he introduces you to the physical forces that have shaped the area from southeastern Wisconsin to northern Indiana and Berrien County in Michigan, the various habitat types present in the region and how European settlement has affected them, and the insects, reptiles, amphibians, birds, fish, and mammals found in presettlement times, then amid the settlers and now amid the skyscrapers. In all, Greenberg chronicles the development of nineteen counties in Illinois, Michigan, and Wisconsin across centuries of ecological, technological, and social transformations. **BOOK JACKET** Legume (Fabaceae) Nomenclature in the USDA Germplasm System John H. Schwartz Soon after we came into extensive meadows and I was assured that those meadows continue for a hundred and fifty miles, being in winter, drowned lands and marshes. By the dryness of the season, they were now beautiful pastures and here presented itself one of the most delightful prospects I have ever beheld, all low grounds being meadow and without wood, and all of the high grounds being covered with trees and appearing like islands, the whole scene seemed an elysium. Capt Thomas Morris 1791 I am sitting in a 60 mile an hour bus sailing over a highway originally laid out for horse and buggy. The ribbon of concrete has been widened and widened until the field fences threaten to topple into the road cuts. In the narrow thread of sod between the shaved banks and the toppling fences grow the relics of what once was Illinois, the prairie. *Endangered Species* U.S. Fish and Wildlife Service.
