## **Guidebook To The Small Gtpases:**

**Guidebook to the Small GTPases** Marino Zerial, Lukas A. Huber, 1995 During the last few years there has been growing interest in the large family of GTPases structurally related to protooncogene product p21 ras These proteins share structural similarities but are involved in a wide spectrum of biological functions While members of the ras subfamily regulate cell growth rho proteins are implicated in the control of cytoskeletal organization in mammalian cells or in bud formation in yeast Members of the ARF SAR family are postulated to control vesicle budding whereas Ypt1 Sec4 rab proteins are thought to regulate vesicle targeting and or fusion Owing to their functional divergence the small GTPases have attracted the attention of many investigators in the fields of structural biology cell biology cell growth and differentiation and developmental biology Numerous studies have contributed important data on the biochemical features the intracellular localization and in some cases the function of these proteins This book contains entries on almost 150 GTPases which have been identified so far and the search has not yet been exhausted This large repertoire of information is gathered together in an easy to consult format This book is meant to provide a catalogue of the information currently at hand to established scientists in the field as well as to introduce more investigators to their proteins of interest     Applications of

Group-Theoretical Methods in Hydrodynamics V.K. Andreiev, O.V. Kaptsov, Vladislav V. Pukhnachev, A.A. Rodionov, 1998-10-31 It was long ago that group analysis of differential equations became a powerful tool for studying nonlinear equations and boundary value problems This analysis was especially fruitful in application to the basic equations of mechanics and physics because the invariance principles are already involved in their derivation It is in no way a coincidence that the equations of hydrodynamics served as the first object for applying the new ideas and methods of group analysis which were developed by 1 V Ovsyannikov and his school The authors rank themselves as disciples of the school The present monograph deals mainly with group theoretic classification of the equations of hydrodynamics in the presence of planar and rotational symmetry and also with construction of exact solutions and their physical interpretation It is worth noting that the concept of exact solution to a differential equation is not defined rigorously different authors understand it in different ways The concept of exact solution expands along with the progress of mathematics solutions in elementary functions in quadratures and in special functions solutions in the form of convergent series with effectively computable terms solutions whose searching reduces to integrating ordinary differential equations etc We consider it justifiable to enrich the set of exact solutions with rank one and rank two in variant and partially invariant solutions to the equations of hydrodynamics     *Cell Biology of Plant and Fungal*

*Tip Growth* Anja Geitmann, Mauro Cresti, Ian Brent Heath, 2001 Tip growth is a type of cellular growth that is represented in many and diverse cell types which are important to plant breeding pollen tubes agriculture root hairs and plant and animal pathology fungal hyphae Also moss and fern protonemata as well as algal zygotes and yeasts exhibit the features unique for tip growth directable apical linear growth which renders the cell able to penetrate its growth environment In this volume

various cell biological aspects of this particular growth phenomenon are discussed such as the initiation and maintenance of an anisotropically growing cell the function of cytoskeletal elements extracellular matrix and turgor the regulation of ion homeostasis the mechanism of signalling events and the interaction of the cell with the environment      **Handbook of Cell Signaling** Ralph A. **Handbook of H<sup>+</sup>-ATPases** Suguru Nakamura,2014-03-19 This handbook on vacuolar and plasma membrane H ATPases is the first to focus on an essential link between vacuolar H ATPase and the glycolysis metabolic pathway to understand the mechanism of diabetes and the metabolism of cancer cells It presents recent findings on the structure and function of vacuolar H ATPase in glucose promoting assembly      **Fusion of Biological Membranes and Related Problems** Herwig J. Hilderson,Stephen Fuller,2005-11-19 Membrane fusion and targeting processes are tightly regulated and coordinated Dozens of proteins originating from both the cytoplasm and membranes are involved The discovery of homologous proteins from yeast to neurons validates a unified view Although much is known about the interfering proteins the events occurring when two lipid bilayers actually fuse are less clear It should be remembered that lipid bilayers behave like soap bubbles fusing when meeting each other In this respect interfering proteins should be considered as preventing undesirable and unnecessary fusion and eventually directing the biological membrane fusion process when where how and overcoming the activation energy In this latest volume in the renowned Subcellular Biochemistry series some aspects of fusion of biological membranes as well as related problems are presented Although not complete there is a lot of recent information including on virus induced membrane fusion The contributors of the chapters are all among the researchers who performed many of the pioneering studies in the field      *The Oncogenomics Handbook* William J. LaRoche, Richard A. Shimkets,2007-11-09 An integrated overview of cancer drug discovery and development from the bench to the clinic showing with broad strokes and representative examples the drug development process as a network of linked components leading from the discovered target to the ultimate therapeutic product Following a systems biology approach the authors explain genomic databases and how to discover oncological targets from them how then to advance from the gene and transcript to the level of protein biochemistry how next to move from the chemical realm to that of the living cell and ultimately pursue animal modeling and
