Medicine and Healing Practices in Ancient Egypt provides a new perspective on healthcare and healing treatments in Egypt from the Predynastic to the Roman periods. Rather than concentrating exclusively on diseases and medical conditions as evidenced in ancient sources, it provides a people-focused perspective asking what it was like to be ill or disabled in this society. Who were the healers? To what extent did disease occurrence and treatment reflect individual social status? As well as geographical, environmental, and dietary factors which undoubtedly affected general health, some groups were prone to specific hazards. These are discussed in detail, including soldiers' experience of trauma, wounds, and exposure to epidemics and conditions like blindness and pneumoconiosis, trauma, and limb amputations resulting from working conditions at building and other sites. Methods of diagnosis and treatment were derived from special concepts about disease and medical ethics. These are explored as well as the individual contributions and professional interactions of various groups of healers and carers. Medical training and practice occurred in various locations, including temples and battlefields; these are described as well as the treatments and equipment that were available. Ancient writers generally praised the Egyptian healers' knowledge, expertise, and professional relationship with their patients. A brief comparison is drawn between this approach and those prevailing elsewhere in Mesopotamia, Greece, and Rome. Finally, Egypt's legacy transmitted through Greek, Roman, and Arabic sources is confirmed as the source of some principles and practices still found in modern Western medicine. Combining information from the latest studies on human remains and the authors' biomedical research, this book brings the subject up to date, enabling a wide readership to access often scattered information in a fascinating synthesis.

**The Harveian Oration** Richard Caton, 1904      The Quick and the Dead Andrew Gordon, Calvin Schwabe, 2004-11-01

This volume uses a cross-disciplinary approach to examine the origins of ancient Egyptian medicine in the domestication, care, and sacrifice of cattle. Ritual cattle sacrifice in Egypt led to a rudimentary understanding of animal anatomy and physiology, which was then applied to humans. Two original theories developed from this comparative medicine: Life as movement, especially seen in the fasciulations of excised limbs, and the male's role in reproduction. Discussions include Egypt as a cattle culture, the ka as an animating force, living flesh, the possible animal origins of the ankh, djed, and was hieroglyphs, the bull's foreleg, and the Opening of the Mouth ritual. Egypt's healing establishment and veterinary medicine as it relates to the origin of human medicine.
