Sin embargo al contrario la necesidad de comprenderlo comparativamente desde diferentes perspectivas y culturas parece haberse intensificado con el giro geográfico experimentado en las ciencias sociales durante las últimas décadas. El jardín japonés se entiende popularmente como una obra de arte cuya representatividad contribuye a la construcción de una identidad cultural propia por medio de la cual se escenifica una proyección social del sujeto o individuo perteneciente a la cultura que lo ha creado. La resonancia polémica que sugiere su nombre lo convierte en una especie de arquetipo local y universal que no puede abordarse separadamente sin tener en cuenta sus antecedentes y su finalidad por ser la expresión de un enjambre de manifestaciones que define o identifica la complejidad de una cultura como la nipona. El arte de los jardines es indisoluble de la idea de representación tanto por el valor simbólico de sus elementos compositivos como por el carácter parlante que por lo general se les atribuye sea cual sea la esencia de su decir y lo que estos pueden llegar a comunicar. Por un lado es una construcción espacial y geográfica que responde a una manera de entender el mundo o cosmología y por otro la representación abreviada de un cosmos que es la expresión de una sociedad humana que construye una imagen de sí misma en un mundo de identidades móviles y migrantes reivindicando lo que está más allá de su carácter efímero para trascender su impermanencia.
