Effective Logic Computation:

Effective Logic Computation K. Truemper, 1998-02-13 A powerful new approach to solving propositional logic problems in the design of expert systems Effective Logic Computation describes breakthrough mathematical methods for computation in propositional logic Offering a highly robust and versatile alternative to the production rule or neural net based approaches commonly used in the design of expert systems Dr Truemper's combinatorial decomposition based approach has produced a compiler that uniquely yields solution algorithms for both logic satisfiability problems and logic minimization problems Also unique to the compiler is computation of a performance guarantee for each solution algorithm Effective Logic Computation provides detailed algorithms for all steps carried out by the compiler Much of the mathematics described in this book has been implemented in the Leibniz System a commercially available software system for logic programming and a leading tool for building expert systems This book's companion volume Design of Intelligent Computer Systems is in preparation and will offer detailed coverage of software implementation and use including a complete version of the Leibniz System Effective Logic Computation is an indispensable working resource for computer scientists and applied mathematicians involved in the design of logic programming software researchers in artificial intelligence and operations researchers

Optimization Methods for Logical Inference Vijay Chandru, John Hooker, 2011-09-26 Merging logic and mathematics in deductive inference an innovative cutting edge approach Optimization methods for logical inference Absolutely say Vijay Chandru and John Hooker two major contributors to this rapidly expanding field And even though solving logical inference problems with optimization methods may seem a bit like eating sauerkraut with chopsticks it is the mathematical structure of a problem that determines whether an optimization model can help solve it not the context in which the problem occurs Presenting powerful proven optimization techniques for logic inference problems Chandru and Hooker show how optimization models can be used not only to solve problems in artificial intelligence and mathematical programming but also have tremendous application in complex systems in general They survey most of the recent research from the past decade in logic optimization interfaces incorporate some of their own results and emphasize the types of logic

most receptive to optimization methods propositional logic first order predicate logic probabilistic and related logics logics that combine evidence such as Dempster Shafer theory rule systems with confidence factors and constraint logic programming systems Requiring no background in logic and clearly explaining all topics from the ground up Optimization Methods for Logical Inference is an invaluable guide for scientists and students in diverse fields including operations research computer science artificial intelligence decision support systems and engineering

Revolutionizing Curricula Through Computational Thinking, Logic, and Problem Solving Fonkam, Mathias Mbu,Vajjhala, Narasimha Rao,2024-06-03 In today s rapidly evolving educational landscape traditional teaching methods often fail to equip students with the skills necessary for success in the 21st century The siloed approach to education where subjects are taught in isolation must reflect the interconnected nature of modern challenges This disconnect between traditional educational models and the needs of the future workforce is a serious concern among educators They face the challenge of preparing students for professions that still need to be created using tools and technologies that are still emerging Revolutionizing Curricula Through Computational Thinking Logic and Problem Solving offers a transformative solution to this challenge By advocating for computational thinking as a fundamental skill set applicable across all academic disciplines the book provides educators with the tools to bridge this gap It introduces computational thinking not just as a technical skill but as a way of problem solving and logical reasoning that enhances critical thinking across subjects Through practical lesson plans case studies and strategies educators can seamlessly integrate computational thinking into their classrooms preparing students for the complexities of the modern world

Handbook of Satisfiability Armin Biere,2009 Satisfiability SAT related topics have attracted researchers from various disciplines logic applied areas such as planning scheduling operations research and combinatorial optimization but also theoretical issues on the theme of complexity and much more they all are connected through SAT My personal interest in SAT stems from actual solving The increase in power of modern SAT solvers over the past 15 years has been phenomenal It has become the key enabling technology in automated verification of both computer hardware and software Bounded Model Checking BMC of computer hardware is now probably the most widely used model checking technique The counterexamples that it finds are just satisfying instances of a Boolean formula obtained by unwinding to some fixed depth a sequential circuit and its specification in linear temporal logic Extending model checking to software verification is a much more difficult problem on the frontier of current research One promising approach for languages like C with finite word length integers is to use the same idea as in BMC but with a decision procedure for the theory of bit vectors instead of SAT All decision procedures for bit vectors that I am familiar with ultimately make use of a fast SAT solver to handle complex formulas Decision procedures for more complicated theories like linear real and integer arithmetic are also used in program verification Most of them use powerful SAT solvers in an essential way Clearly efficient SAT solving is a key technology for 21st century computer science I expect this collection of papers on all theoretical and

practical aspects of SAT solving will be extremely useful to both students and researchers and will lead to many further advances in the field Edmund Clarke FORE Systems University Professor of Computer Science and Professor of Electrical and Computer Engineering at Carnegie Mellon University winner of the 2007 A M Turing Award **Green, Pervasive, and Cloud Computing** Shijian Li, 2019-03-14 This book constitutes the proceedings of the 13th International Conference on Green Pervasive and Cloud Computing GPC 2018 held in Hangzhou China in May 2018 The 35 full papers included in this volume were carefully reviewed and selected from 101 initial submissions They are organized in the following topical sections network security and privacy preserving pervasive sensing and analysis cloud computing mobile computing and crowd sensing social and urban computing parallel and distributed systems optimization pervasive applications and data mining and knowledge mining Nanomagnetic and Spintronic Devices for Energy-Efficient Memory and Computing Jayasimha Atulasimha, Supriyo Bandyopadhyay, 2016-03-07 Nanomagnetic and spintronic computing devices are strong contenders for future replacements of CMOS This is an important and rapidly evolving area with the semiconductor industry investing significantly in the study of nanomagnetic phenomena and in developing strategies to pinpoint and regulate nanomagnetic reliably with a high degree of energy efficiency This timely book explores the recent and on going research into nanomagnetic based technology Key features Detailed background material and comprehensive descriptions of the current state of the art research on each topic Focuses on direct applications to devices that have potential to replace CMOS devices for computing applications such as memory logic and higher order information processing Discusses spin based devices where the spin degree of freedom of charge carriers are exploited for device operation and ultimately information processing Describes magnet switching methodologies to minimize energy dissipation Comprehensive bibliographies included for each chapter enabling readers to conduct further research in this field Written by internationally recognized experts this book provides an overview of a rapidly burgeoning field for electronic device engineers field based applied physicists material scientists and nanotechnologists Furthermore its clear and concise form equips readers with the basic understanding required to comprehend the present stage of development and to be able to contribute to future development Nanomagnetic and Spintronic Devices for Energy Efficient Memory and Computing is also an indispensable resource for students and researchers interested in computer hardware device physics and circuits design Bioinformatics and Computational Biology Sanguthevar Rajasekaran, 2009-03-27 This book constitutes the refereed proceedings of the First International on Bioinformatics and Computational Biology BICoB 2007 held in New Orleans LA USA in April 2007 The 30 revised full papers presented together with 10 invited lectures were carefully reviewed and selected from 72 initial submissions The papers address current research in the area of bioinformatics and computational biology fostering the advancement of computing techniques and their application to life sciences in topics such as genome analysis sequence analysis phylogenetics structural bioinformatics analysis of high throughput biological data genetics and population analysis
