

# Anatomy

Tigers are the largest member of the Felidae family. They also set themselves apart with their unique coat, as stripes are rarely found in other felines. Their coat ranges from shades of orange to brown and rarely seen white. All white Bengal tigers are captives that have been bred from one male tiger that was captured in the 1960s.

The color of the white tiger's fur is the result of a genetic mutation called leucism, they are NOT an endangered species.

Tiger's distinct black stripes can also be seen when they are bald, as the stripes are found on their skin as well as their fur.
