Non-University Higher Education in Europe James S. Taylor, José Brites Ferreira, Maria de Lourdes Machado, Rui Santiago, 2008-06-01 Today a substantial portion of higher education is provided outside of the traditional universities in non university institutions with a multitude of varied characteristics In recent decades higher education systems have been subjected to many changes and reforms throughout the world One of the most important was undoubtedly the expansion of higher education in the second half of the last century from an elite system to one for the masses While institutions of higher learning have been in existence for approximately 1 000 years this exponential growth has been much more recent This movement toward mass higher education has created substantial national impacts on the development of the systems of higher education While common denominators of change and adaptation can be identified globally there remain important differences from country to country There are many factors challenging higher education today and in the foreseeable future In one form or another these issues and trends can be seen in higher education systems throughout the world They include chronic underfunding marketisation and competition alternative providers massification internationalisation governance leadership strategic management accountability accreditation and social relevance Another key factor for many countries especially in Europe and the focus of this book is the current and future status of the higher education systems that differentiate the university and non university sectors

outlined in the preface this book is based on the belief that the only substantial hope of rescue in the present world crisis and the saving of even civilization itself depend upon the degree to which the creative thought that the coming generations may bring is applied to a continued and purposeful reconstruction of the modes of living The world is in need as never before of stronger and more clearly conceived ideals of conscious effort in the service of humanity The salvation of society must be mined out of its own depths Much of this work must be done by those now at school and therefore we are at once led to inquire to what extent the present systems of education provide for conditions that are provocative of free and spontaneous thought In each of the several countries with which the present study is concerned there is a considerable body of men and women who have undertaken a serious and thoughtful campaign of education The pages that follow attempt to give a summary account of the origin and the likelihood of success of these several undertakings
