Teaching Quality in Higher Education: Do Student Evaluation of Teaching Questionnaires Allow a Reliable and Valid Assessment of Teaching Quality? Daniela Feistauer, 2018 Improving teaching quality is a relevant topic in society to nurture the students innate potential in the best possible way One often applied tool for assessing teaching quality in higher education is student evaluations of teaching SETs that are used as a criterion for making important decisions in higher education such as employing teachers distributing funds and making changes in the curriculum Despite their effect on decisions it is relatively unclear if SETs are a valid and reliable assessment of teaching quality Therefore the current dissertation examines the influence of student characteristics that are not conceptually related to teaching quality in two ways First the variance of students was estimated through cross classified multilevel models This type of analysis allows a direct estimation of variance attributed to the students while separating it from the residual variance Second selected student characteristics were added as predictors to estimate their effect on SETs and therefore to enhance the interpretation of their validity In all studies a standardized German questionnaire was applied as the SET instrument The first study investigated the reliability of SETs as measurement of teaching quality which was operationalized as interrater reliability calculated from intra class correlations It was assessed by comparing the variance components of teachers courses and students The instrument can be considered reliable only when a high proportion of variance is explained by teachers and courses however not by students The study revealed that teachers and courses were large sources of variance in different dimensions of the questionnaire This result suggests that SETs are reliable instruments if a sufficient number of students at least 24 evaluate a teacher and course Moreover the study also revealed students and the interaction of students and teachers as relevant sources of variance This finding implies that student characteristics and the individual fit between students and teachers can affect SETs and should be considered in the ongoing discussion of the instrument s validity The latter two studies examined the validity of SETs The second study focused on student s characteristics content expectations and prior subject interest Both variables are theoretically unrelated to teaching quality because they are outside of the teacher s sphere of influence Therefore they should not affect SET results This means that th

Quality Assurance in Higher Education Stamelos Georgios,K.M. Joshi,Saeed Paivandi,2017-01-30 The significant growth of number of students enrolled in tertiary education institutions in the recent past decades has caused an unprecedented expansion of higher education systems The rapid and constant social economic and technological mutations and international competition make the importance of qualitatively well educated citizenry and labor forces very decisive Globalization has developed a powerful impact on the development of higher education and imposes new challenges for the organization standards financing regulations Systems of higher education tend to detach from the national models and adopt a more global orientation The implementation of quality assurance is one of the recent and most decisive transformations of higher education Different higher education systems are trying to develop assessment tools internal and external to improve the quality of teaching research and extension activities and these are either based on experiences of selected countries or are extensively country specific The quality assurance procedures that were often dependent on national directorial traditions have gradually tended to converge and led to a setup of common tools and standards Countries under a centralized system tend to impose a uniform and general model while decentralized systems give greater freedom to universities to set up their own quality International rankings of universities also contribute to impose a set of transnational standards and values which is also being considered as indicative by the stakeholders The present book tries to look at the quality assurance mechanism international rankings and its impact in both absolute and comparative fashion in context of 11 countries from different parts of the world

Evaluation of Online Higher Education Ana Balula,António Moreira,2014-05-27 The work presents a theoretical framework for the evaluation of e Teaching that aims at positioning the online activities designed and developed by the teacher as to the Learning Interaction and Technology Dimensions The theoretical research that underlies the study was developed reflecting current thinking on the promotion of quality of teaching and of the integration of information and communication tools into the curriculum in Higher Education HE i e bearing in mind some European guidelines and policies on this subject This way an answer was sought to be given to one of the aims put forward in this study namely to contribute towards the development of a conceptual framework to support research on evaluation of e teaching in the context of HE Based on the theoretical research carried out an evaluation tool SCAI was designed which integrates the two questionnaires developed to collect the teachers and the students

perceptions regarding the development of e activities Consequently an empirical study was structured and carried out allowing SCAI tool to be tested and validated in real cases From the comparison of the theoretical framework established and the analysis of the data obtained we found that the differences in teaching should be valued and seen as assets by HE institutions rather than annihilated in a globalizing perspective
