Evaluation Of Mineral Reserves A Simulation Approach:

Evaluation of Mineral Reserves Andre G. Journel, Phaedon C. Kyriakidis, 2004-05-27 This book addresses the practice of geostatistical simulation to evaluation of mineral reserves prediction of recovered tonnages and mineral grades and the impact of mining dilution Such prediction is absolutely critical for mine planning and investment decisions yet it cannot be made on maps directly interpolated from present data Various dilution factors need to be introduced to account for the support effect mining unit volumes are vastly different from composite data unit volumes the information effect future selection of ore waste will be based on vastly different data than that presently available Geostatistical simulations allow a rigorous evaluation of these effects on reserves recovery These stochastic simulations have the potential to be for the mining industry what a wind tunnel is for aircraft design This book is written by two expert geostatisticians Journel is the pioneer of mining geostatistics and established academics *Geostatistics Notes for Practitioners* Glen Nwaila, Leon Tolmay, Mark Burnett, 2024-08-20 This book provides a practical perspective of all the processes involved in estimating mineral resources and reserves including mine to mill reconciliation It provides an integrated step by step explanation of processes for performing each step including insight from academic and industry practitioners Each chapter details a specific aspect of the estimation processes in a practical manner It contains examples and case studies to illustrate the practical application of geostatistics in mineral resource estimation mineral reserve conversion and reconciliation Features Provides a step by step guide with over 10 000 lines of Python code for hands on demonstration from start to finish for both linear and non linear geostatistical methods Explains practical geostatistics processes and functionality Simplifies explanation of mathematical statistical concepts and application Discusses generalised examples to aid the process steps Reviews processes involved in the mineral resources estimation and ore reserve conversion This book is intended for third year and postgraduate students in Mineral Resources Management Geology Spatial Statistics and Mining Engineering as well as practising professionals
