Every Nineteen Years

Sarah Bartlett

Every Nineteen Years:

Cases Decided in the Court of Session, Teind Court, Court of Exchequer and House of Lords Scotland. Court of Session, 1843 The Old and New Testament Connected Humphrey Prideaux, 1839 *Encyclopaedia Londinensis* John Wilkes, 1810 **A Social and Religious History of the Jews: High Middle Ages, 500-1200** Salo Wittmayer Baron, 1952

This book explores the puzzling phenomenon of new veiling practices among lower middle class women in Cairo Egypt. Although these women are part of a modernizing middle class they also voluntarily adopt a traditional symbol of female subordination. How can this paradox be explained? An explanation emerges which reconceptualizes what appears to be reactionary behavior as a new style of political struggle as accommodating protest. These women, most of them clerical workers in the large government bureaucracy, are ambivalent about working outside the home, considering it a change which brings new burdens as well as some important benefits. At the same time they realize that leaving home and family is creating an intolerable situation of the erosion of their social status and the loss of their traditional identity. The new veiling expresses women's protest against this. MacLeod argues that the symbolism of the new veiling emerges from this tense subcultural dilemma involving elements of both resistance and acquiescence.

Exploring Continued Fractions: From the Integers to Solar Eclipses Andrew J. Simoson, 2021-04-30. There is a nineteen year recurrence in the apparent position of the sun and moon against the background of the stars, a pattern observed long ago by the Babylonians. In the course of those nineteen years the Earth experiences 235 lunar cycles. Suppose we calculate the ratio of Earth's period about the sun to the moon's period about Earth. That ratio has 235/19 as one of its early continued fraction convergents which explains the apparent periodicity. Exploring Continued Fractions explains this and other recurrent phenomena: astronomical transits and conjunctions, lifecycles of cicadas, eclipses by way of continued fraction expansions. The deeper purpose is to find patterns, solve puzzles and discover some appealing number theory. The reader will explore several algorithms for computing continued fractions including some new to the literature. He or she will also explore the surprisingly large portion of number theory connected to continued fractions: Pythagorean triples, Diophantine equations, the Stern-Brocot tree and a number of combinatorial sequences. The book features a pleasantly discursive style with excursions into music, The Well-Tempered Clavier, history, the Ishango bone and Plimpton 322, classics, the shape of More's Utopia and whimsy, dropping a black hole on Earth's surface. Andy Simoson has won both the Chauvenet Prize and Pólya Award for expository writing from the MAA and his Voltaire's Riddle was a Choice magazine Outstanding Academic Title. This book is an enjoyable ramble through some beautiful mathematics. For most of the journey the only necessary prerequisites are a minimal familiarity with mathematical reasoning and a sense of fun.
