The Everyday Life of Global Finance Paul Langley, 2008-05-08

In the US and UK, saving and borrowing routines have changed radically and become closely bound up

with the capital markets of global finance As mutual funds have increased in popularity and pension provision has been transformed many more individuals and households have come to invest in stocks and shares As consumer borrowing has risen dramatically and mortgage finance has been extended to those deemed sub prime so the repayments of credit card holders and mortgagors have provided the basis for the issue and trading of bonds and other market instruments The Everyday Life of Global Finance explores the unprecedented relationships that now bind society and the markets challenging the dominant tendency to simply position recent developments in Wall Street and the City of London at the centre of contemporary finance Grounded in literature from the sociology of finance and international political economy drawing on the social theory of Callon Foucault and Latour and informed by extensive empirical research the book shows how global finance has become mundane and ordinary in Anglo America Finance is not out there somewhere but is embedded in the calculative technologies and performances of reconfigured saving and borrowing networks and is embodied through the assembly of everyday financial identities and self disciplines Society s new found relationships with the financial markets are also shown however to be marked by stark inequalities manifest contradictions and political dissent The Everyday Life of Global Finance is thus an ambitious and innovative contribution to our understanding of the contemporary financial world

Day Trading For Beginners Michael Branson, 2020-02-08 Understanding how financial markets work is crucial to making sure that global and economic markets are stable Market participants traders vary due to their capital endowment financial motivation and the type of trading activity Each activity is also subject to different regulations depending on how sensitive it is and the country that it is based One of the trading strategies that many traders have come to love is day trading This is a process whereby you buy and sell stocks on the same trading day This is different from other types because the trading activity continues even after the marketing hours have closed Traders that buy and sell using this method of trading are called day traders The time allows you to run dozens of trades in a single day or

run a single trade You might decide to buy a stock the first day and then sell it the next day that is if you realize that selling the same day might not prove profitable The standard practice is for traders to close trades at the end of the day Trades usually last a few minutes or seconds These traders do this because they want to avoid any risks that arise out of price gaps between the closing price on the day of buying the stock and the opening price of the next day Just like any other day these traders make quick profits and also quick losses in such a short period of time The good thing is that day trading gives you a chance to make decisions based on analysis of patterns Day traders study the general market and the price and volume movement of the stocks They then use fundamental and technical analysis to keep themselves abreast with the latest news items in order to make the right decisions With the right decisions come better profits and satisfaction from all you do on the market
