European Historiography Of Technology:

European Historiography of Technology Dan Ch Christensen,1993 Intends to study the relationship between technology as artefacts and skills and cultural environments academies of science education systems and ethical values in a comparative European perspective

Technology in Modern German History Karsten Uhl,2022-01-27 People often associate postwar Germany with technology and with its products of mass consumption such as luxury cars Even pop music most notably Kraftwerk literally power station with songs such as Autobahn Radioactivity or We are the Robots disseminates the stereotype of a close link between German culture and technology Technology in Modern German History explores various forms of technology in 200 years of German history and explains how technology has been fundamental to the shaping of modern Germany The book investigates the role technology played in transforming Germany s culture society and politics during the 19th and 20th centuries Key topics covered include the different stages of industrialization the growth of networked cities and the triumph of a teleological narrative of technology as progress Moreover it provides a critical revision of the history of high technology which reveals how high tech euphoria determined certain paths in history regardless of whether the respective technology proved to be successful In its second part the volume introduces new avenues in scholarship Karsten Uhl examines neglected areas such as rural technologies or the often overlooked importance of everyday technologies How did consumers or workers use new technologies How did they appropriate and modify them Lastly the book considers the final decades of the 20th century and asks if they provided a significant new quality of technological change To what degree and effects did computerization transform professional and private life in Germany In culture and politics reinforced by the German variety of environmentalism the idea of progress was challenged as the once prevailing vision of progress gave way to new apprehensions of uncertainty evident to this day Technology in Modern German History brings fascinating insight into a much neglected area of German history for students and scholars alike

Fifty Years of Medieval Technology and Social Change Steven A. Walton,2019-08-22 This volume brings together a series of papers at Kalamazoo as well as some contributed papers inspired by the fiftieth anniversary of the publication of Lynn White Jr s *Medieval Technology and Social Change* 1962 a slim study which catalyzed the study of technology in the Middle Ages in the English speaking world While the initial reviews and decades long fortune of the volume have been varied it is still in print and remains a touchstone of an idea and a time The contributors to the volume therefore both investigate the book itself and

its fate and look at new research furthering and inspired by White's work. The book opens with an introduction surveying White's career with a bibliography of his work as well as some opening thoughts on the study of medieval technology in the last fifty years. Three papers then deal explicitly with the reception and longevity of his work and its impact on medieval studies more generally. Then five papers look at new cast studies areas where White's work and approach has had a particular impact namely medieval technology studies and medieval rural ecological studies.

The Oxford Handbook of Postwar European History Dan Stone, 2012-05-17 The postwar period is no longer current affairs but is becoming the recent past. As such it is increasingly attracting the attentions of historians. Whilst the Cold War has long been a mainstay of political science and contemporary history, recent research approaches postwar Europe in many different ways, all of which are represented in the thirty-five chapters of this book. As well as diplomatic, political, institutional, economic and social history, The Oxford Handbook of Postwar European History contains chapters which approach the past through the lenses of gender, espionage, art and architecture, technology, agriculture, heritage, postcolonialism, memory and generational change, and shows how the history of postwar Europe can be enriched by looking to disciplines such as anthropology and philosophy. The Handbook covers all of Europe with a notable focus on Eastern Europe. Including subjects as diverse as the meaning of Europe and European identity, southern Europe after dictatorship, the cultural meanings of the bomb, the 1968 student uprisings, immigration, Americanization, welfare, leisure, decolonization, the Wars of Yugoslav Succession and coming to terms with the Nazi past, the essays in this Handbook offer an unparalleled coverage of postwar European history that offers far more than the standard Cold War framework. Readers will find self-contained state-of-the-art analyses of major subjects, each written by an acknowledged expert, as well as stimulating and novel approaches to newer topics. Combining empirical rigour and adventurous conceptual analysis, this Handbook offers in one substantial volume a guide to the numerous ways in which historians are now rewriting the history of postwar Europe.

History of Technology Volume 32 Ian Inkster, 2014-10-30 This volume provides an overview of current research in the history of Italian technology in the long run from the early Middle Ages to the 20th century. The contributors focus on different aspects of Italian creativity in a local, transnational and global dimension, tracing the trajectory from primacy to relative decline. The themes range from the creation and establishment of new technologies in laboratories or enterprises, the processes of learning, diffusion and copying, and the institutions involved in the generation of a national technological capability and innovation system. Comparative studies are included in order to illustrate special features of the Italian case. The industries covered in this volume range from silk, iron and steel production to electricity generation and telecommunications. Special Issue: Italian Technology from the Renaissance to the 20th Century. Edited by Anna Guagnini and Luca Mola. Included in this volume: Inventors, Patents and the Market for Innovations in Renaissance Italy; The Microcosm: Technological Innovation and the Transfer of Mechanical Knowledge in the Habsburg Empire of the Sixteenth century; Diamonds in Early Modern Venice; Technology, Products and International Competition. Internationalists in European History Jessica Reinisch, David Brydan, 2021-01-28 Representing a crucial intervention in the history of internationalism transnationalism and global history this edited collection examines a variety of international movements organisations and projects developed in Europe or by Europeans over the course of the 20th century Reacting against the old Eurocentricism much of the scholarship in the field has refocussed attention on other parts of the globe This volume attempts to rethink the role played by ideas people and organisations originating or located in Europe including some of their consequential global impact The chapters cover aspects of internationalism such as the importance of language communication and infrastructures of internationalism ways of grappling with the history of internationalism as a lived experience and the roles of European actors in the formulation of different and often competing models of internationalism It demonstrates that the success and failure of international programmes were dependent on participants ability to communicate across linguistic but also political cultural and economic borders By bringing together commonly disconnected strands of European history and history from below this volume rebalances and significantly advances the field and promotes a deeper understanding of internationalism in its many historical guises The volume is conceived as a way of thinking about internationalism that is relevant not just to scholars of Europe but to international and global history more generally

History of Artificial Cold, Scientific, Technological and Cultural Issues Kostas Gavroglu, 2013-11-19 The history of artificial cold has been a rather intriguing interdisciplinary subject physics chemistry technology sociology economics anthropology consumer studies which despite some excellent monographs and research papers has not been systematically exploited It is a subject with all kinds of scientific technological as well as cultural dimensions For example the common home refrigerator has brought about unimaginably deep changes to our everyday lives changing drastically eating habits and shopping mentalities From the end of the 19th century to the beginning of the 21st issues related to the production and exploitation of artificial cold have never stopped to provide us with an incredibly interesting set of phenomena novel

theoretical explanations amazing possibilities concerning technological applications and all encompassing cultural repercussions The discovery of the unexpected and bizarre phenomena of superconductivity and superfluidity the necessity to incorporate macroscopic quantum phenomena to the framework of quantum mechanics the discovery of Bose Einstein condensation and high temperature superconductivity the use of superconducting magnets for high energy particle accelerators the construction of new computer hardware the extensive applications of cryomedicine and the multi billion industry of frozen foods are some of the more dramatic instances in the history of artificial cold

Constructing Iron Europe Irene Anastasiadou, 2011-12-01 Conventional histories portray the development of railway infrastructures as a tool to build empires and nation states Recent scholarship however has stressed the importance of a transnational perspective beyond an exclusive focus on the nation state The new perspective enriches both the history of modern Europe and European integration *Constructing Iron Europe* demonstrates how during the interwar years key players saw railroads as instruments for building a transnational European community Based on new archival research Anastasiadou not only sheds light on patterns of internationalization of railways but also explores the co construction of the national and the European in the case of the Greek railways in the Interbellum period Foundation for the History of Technology Amsterdam University Press

European Coasts of Bohemia Jiri Janac, 2013-08-01 The Danube Oder Elbe Canal promised to create an integrated waterway system across Europe linking Black Sea ports to Atlantic markets and giving landlocked Czech nation its own connections to the ocean The fascinating history of this never completed project *European Coasts of Bohemia* tells the story of the experts who confronted and contributed to different and often conflicting geopolitical visions of Europe Jiri Janac shows how the canal backers adapted themselves to various political developments such as the break up of the Austrian Hungarian Empire and the integration into the Soviet Bloc while still managing to keep

the canal project alive A Political History of Big Science Katharina C. Cramer, 2020-08-31 This book investigates the political history of Big Science in Europe in the late twentieth century and the early twenty first century characterised by the founding histories of two collaborative single sited facilities namely the European Synchrotron Radiation Facility ESRF in Grenoble France and the European X Ray Free Electron Laser European XFEL in Schenefeld Germany Under the heading of the other Europe this book presents the history and politics of European Big Science as an alternative road to Western European integration besides the mainstream political integration process of the European Economic Community and the European Union It shows that Big Science has a role to play in European politics and policymaking and that the crucial and unavoidable symbiosis between science technology and politics brings the creation of Big Science projects back to geopolitical realities

Eight Eurocentric Historians James Morris Blaut, 2000-08-10 This text examines and critiques the work of a diverse group of Eurocentric historians who have strongly shaped our understanding of world history It provides invaluable insights and tools for readers across a range of disciplines

Driving Europe Frank Schipper, 2008 Today we can hardly imagine life in Europe without roads and the automobiles that move people and goods around In fact the vast majority of movement in Europe takes place on the road Travelers use the car to explore parts of the continent on their holidays and goods travel large distances to reach consumers Indeed the twentieth century has deservedly been characterised as the century of the car The situation looked very different around 1900 People crossing national borders by car encountered multiple hurdles on their way Technically they imported their vehicle into a neighboring country and had to pay astronomic import duties Often they needed to pass a driving test in each country they visited Early on automobile and touring clubs sought to make life easier for traveling motorists International negotiations tackled the problems arising from differing regulations The resulting volume

describes everything from the standardized traffic signs that saved human lives on the road to the Europabus taking tourists from Stockholm to Rome in the 1950s. *Driving Europe* offers a highly original portrait of a Europe built on roads in the course of the twentieth century. *Peripheral Flows* Simone Fari, Massimo Moraglio, 2016-06-22 The main purpose of the eleven contributions to this volume is to reconsider and re-assess the role of cores and peripheries in shaping modern socio-technical systems. From this perspective they explore a terrain of highly complex systems mainly operating on the so-called Western model. Railways, telegraphs, motor vehicles and airports were in fact all born in classic cores areas in the West and then spread out into the peripheries. The approach in itself is not new but this volume has managed to bring out interestingly innovative elements and viewpoints. The contributors are not content with the traditional definitions of peripheries and flows but tend to put them to the test, revise them and eventually offer critiques. The result is a tempering of the monolithic and traditional concept of a one-way transfer. No longer therefore a simple and linear act of adoption but a recourse to adaptation, changes in meaning, use and perception. The volume is a starting point for future explorations on the subject of science and technology studies and takes part in a wider discussion of globalisation, global and transnational history. *The Complete Idiot's Guide to European History* Nathan Barber, 2006 The history of modern Europe isn't simply the story of a bunch of dead white men who ruled most of the world from the dawn of a new age, the Renaissance, that brought light to the Dark Ages through to the chaotic last gasp of communism and the dawn of yet another new age, the European Union. Rather it's an epic involving the cultural, economic, political and social developments that played fundamental roles for better or for worse in the life we live today. Without an understanding of events and personalities in Italy, Germany, Switzerland, Austria, the Netherlands, Spain, France, Britain, Russia, Poland and other lands it's impossible to truly appreciate the development of contemporary institutions, the role of continuity and change in present-day society and politics and the evolution of current forms of artistic and intellectual expressions. *U.S. Army Historical Directory* Center of Military History, *the Cambridge Economic History of Europe* Edwin Ernest Rich, 1967
