Müller, 2012-12-06 Two events have recently improved the prospects of protecting fish and their environment in Switzerland the acceptance of a new Federal Water Protection Law in the plebiscite of May 17th 1992 and the new Federal Legislation on Fisheries in force since January 1st 1994 With this legal framework the possibilities for protection of nature and landscape have now considerably improved in Switzerland The most important aims of the Federal Law on Water Protection are to safeguard the natural habitats of the native flora and fauna and water as the habitat of aquatic organisms This includes not only the preservation or restoration of water quality in lakes and rivers but also in rivers used for hydroelectricity irrigation or as industrial or other water supplies the maintenance of sufficient water to fulfill the minimal requirements for fish However good quality water in sufficient quantities alone is not enough to guarantee the survival of fish Intact fish habitats comprise various physical structures including plenty of hiding places hunting grounds reproduction and nursery areas within suitable distances from each other This third aspect of conservation and restoration of aquatic habitats is a central point in the new Federal Law on Fisheries Whereas the former versions of this law were more concerned with fishery regulations the recent legislation defines new areas of responsibility for the federal and the cantonal governments

Biological invaders in inland waters: Profiles, distribution, and threats Francesca Gherardi, 2007-08-30 Invasive species have come to dominate 3% of the Earth's ice free surface constituting one of the most serious ecological and economic threats of the new millennium and freshwater systems are particularly vulnerable This book examines the identity distribution and impact of freshwater non indigenous species and the dynamics of their invasion It focuses on old and new invaders and provides a starting point for further research Trends in Fisheries and Aquatic Animal Health Panagiotis

Berillis, 2017-11-11 Fish and other seafood have always been considered as an important part of human diet and have also long been recognized as a health promoting food for human nutrition However managing aquatic food resources remains a challenge as the human population is expanding and overfishing poses a threat to fishing reserves in several areas Aquaculture is the alternative solution for food production from the sea According to the FAO aquaculture is probably the fastest growing food producing sector and can be a sustainable solution for fish production In order to maximize marine food production and achieving sustainable management of the aquatic environment knowledge about aspects of fisheries and aquatic animal health is very important Trends in Fisheries and Aquatic Animal Health covers some basic and applied topics in fishery management and fish health with a focus on European regions The textbook is a combination of reviews and

research articles Topics covered in the book include challenges in fishery management environmental impacts on fisheries fish health pharmacology histopathology stress response telemetry techniques in fisheries research and specific case studies of regional marine species in localized fisheries This textbook is a useful resource for graduates and professionals involved in advanced training courses for aquaculture and fishery management **Historical Review of EIFAC Activities** A.
