European Regional Growth:

Innovation and Regional Growth in the European Union Riccardo Crescenzi, Andrés Rodríguez-Pose, 2011-06-17 This book investigates the EU's regional growth dynamics and in particular the reasons why peripheral and socio economically disadvantaged areas have persistently failed to catch up with the rest of the Union. It shows that the capability of the knowledge based growth model to deliver its expected benefits to these areas crucially depends on tackling a specific set of socio institutional factors which prevents innovation from being effectively translated into economic growth. The book takes an eclectic approach to the territorial genesis of innovation and regional growth by combining different theoretical strands into one model of empirical analysis covering the whole EU 25. An in depth comparative analysis with the United States is also included providing significant insights into the distinctive features of the European process of innovation and its territorial determinants. The evidence produced in the book is extensively applied to the analysis of EU development policies.

European Regional Growth Bernard Fingleton, 2003-02-26 This book is the outcome of three major influences. First the ongoing integration of the European regional economies and the need to understand what this means for European economic and social cohesion. Second the development of geo economic theories ranging from neoclassical growth theory and endogenous growth theory to new theories of economic geography. Third the development of techniques of spatial data analysis simulation data visualization and spatial econometrics. The outcome is a collection of chapters which apply these methods motivated by a variety of theoretical stances in order to advance our understanding of European regional growth. The book provides powerful and detailed analyses of the causes of income productivity and employment variations across Europe's regions and insights into their future prospects.

European Regional Growth Bernard Fingleton, 2014-03-12 European Regional Growth is the result of three major influences. First the ongoing integration of the European regional economies and the need to understand what this means for European economic and social cohesion. Second the development of geo economic theories. Third the development of techniques of spatial data analysis simulation data visualization and spatial econometrics. The outcome is a collection of chapters that apply these methods motivated by a variety of theoretical positions. The book provides powerful and detailed analyses of the causes of income productivity and employment variations across Europe's regions and insights into their future prospects.

European Regional Growth Bernard Fingleton, 2013-06-29 Looking into the future and trying to visualize long run regional disparities is difficult. There is no agreed single theory to guide our model building although some insight can be gained from analysis of the past and by looking at the different theoretical positions to see if there is any agreement at least in terms of outcome if not in terms of mechanism. This is what is attempted in this book which brings together specialists with a common interest in European regional growth and in applying quantitative analytical and simulation techniques in order to provide different perspectives on the topic. Many of the Chapters in the book employ the methods of spatial econometrics. Spatial econometrics is a suite of

statistical and econometric tools dedicated to the analysis of spatial data in other words data that is set within the context of socio economic theories and which can be represented most informatively in mapped form These methods have emerged over the last half century from a series of influential papers and books in the fields of regional science spatial statistics and quantitative geography and are ripe for serious application in the context of the EU's development In particular they provide the means by which to analyze spatially indexed data where the time dimension is essentially suppressed because for instance the variables of interest are not available or are of questionable accuracy which is often the case when one is interested in regional rather than national variations across a number of countries

Convergence After Divergence? Regional Growth in Europe Gabriele Tondl, 2001-08-29 Written by an economist who is specialized in growth theory and also an expert on European Integration the book looks at economic growth of EU regions from a theoretical as well as an empirical perspective It settles the issue in the context of EU integration and the EU's cohesion problem and provides systematic analytical growth theory arguments with respect to EU regional development This approach differs from the common view of the literature which stresses regional development theories and regional policies when looking at EU regional problems The volume provides unique rich empirical evidence of European regional problems and growth patterns and investigates growth and convergence of EU regions with the latest econometric panel data methods It offers new insights both for growth researchers and regional economists interested in developments in the European Union

European Regional Development Paweł Churski, Tomasz Herodowicz, Barbara Konecka-Szydłowska, Robert Perdał, 2021-11-18 This book offers a comprehensive overview of contemporary issues of regional development It places particular emphasis on its socio economic and socio political determinants which accompany the problem of existing and ever widening differences in the level of regional development in various parts of Europe In order to diagnose the scale of those differences and to indicate the main forces behind the divergence of development the authors propose an original systematisation of regional development factors drawing attention to the need to consider them within the framework of present day socio economic megatrends The proposed approach to the development factors is also used for the author's operationalisation of the concept of territorial capital which is at the centre of regional place based policy The wide spatial aspect of the analysis national and local and its extensive temporal scope 2004 2019 yields unique results and creates an important element of added value for this book which shows the regularities of the process of regional development in Europe at three spatial levels pan European national and intra regional Furthermore it indicates the challenges faced by regionalists who attempt to carry out research on different territorial levels with a diverse number of units 205 EU regions 16 Polish voivodeships 2 478 Polish local units and extended observation periods 2004 2017 The solutions proposed by the authors who show the potential of overcoming the barriers resulting from limited access to complete and comparable statistical data series should be inspiring for many researchers The unique results of direct research carried out on a large sample of respondents and entrepreneurs via diverse

field research techniques constitute a valuable source of information on local conditions that impact contemporary development processes in less developed regions Their value is even greater because they were carried out in a unique laboratory created by the authors for testing the regularity of formation and impact of socio economic development factors in various locally determined conditions of this process It consists of purposefully selected test units LAU2 Located in a less developed region they represent all growth types and functional test units identified in the course of the research Consequently the results obtained may be generalised and applied to other areas showing similar features of territorial capital The monograph is addressed primarily to a wide group of regionalists connected with economic and social sciences as well as to practitioners involved in the implementation of development policies at various levels

Globalization and Regional Growth in Europe Roberta Capello,Ugo Fratesi,Laura Resmini,2011-05-29 After a description of the new forms of globalization currently shaping our world and of their possible spatial effects the book highlights which European regions have in the past succeeded in taking advantage of globalization trends and identifies the major reasons for their success The book also offers a prospective analysis utilizing scenarios based on different assumptions of how globalization trends will develop identifying the regional winners and losers for each scenario The analysis greatly benefits from a unique database which contains among others data on FDI by sector and professions at the regional Nuts 2 level for all 27 EU countries A time span of more than 10 years is covered and scenarios are developed for the future development up to 2020

European Regional Development Fund Great Britain: Parliament: House of Commons: Communities and Local Government Committee,2012-07-13 The abolition of the Regional Development Agencies removed the main source of match funding for ERDF sponsored projects and the economic downturn has curbed alternative options for match funding even further There is a pressing need to spend each region s ERDF allocation before 2015 but unless ministers take urgent steps to deliver on the Government s promise to make it easier for projects to secure match funding through the Regional Growth Fund there is a significant risk that value for money will suffer and ERDF will not make the impact it could to help rebalance the UK s economy The Committee endorses a number of sensible rule changes that will govern the next ERDF round 2014 20 currently proposed and related proposals to give Member States the power to tailor the size of their Operational Programme areas which could permit Local Economic Partnerships in England to take responsibility for managing EU funds MPs also challenge the current allocation system where even the wealthiest Member States receive some ERDF funding when a portion of what they pay in originally gets recycled back to them The cross party group of MPs calls for this circular money flow to end and for England to retain this portion of funding to deliver its own regional policy The Government would have to guarantee the same level of funding across the EU s 7 year funding cycle This change would not affect the Government s contribution to ERDF for the poorer Member States Lastly MPs challenge the Government to evaluate the value for money of ERDF funded projects

Handbook of Regional Growth and Development Theories Roberta Capello,Peter

Nijkamp,2019 Regional economics an established discipline for several decades has undergone a period of rapid change in the last ten years resulting in the emergence of several new perspectives At the same time the methodology of regional economics has also experienced some surprising developments This fully revised and updated Handbook brings together contributions looking at new pathways in regional economics written by many well known international scholars The aim is to present the most cutting edge theories explaining regional growth and local development The authors highlight the recent advances in theories the normative potentialities of these theories and the cross fertilization of ideas between regional and mainstream economists It will be an essential source of reference and information for both scholars and students in the field

Human Capital and Regional Development in Europe Claude Diebolt,Ralph Hippe,2022-01-07 Human capital is of utmost importance for the future of our knowledge economies and societies However it is unequally distributed in Europe contributing to marked spatial patterns of economic prosperity within and across countries In many cases these patterns have a long history To understand them better it requires to go back in time when mass schooling was starting to become a reality across Europe Taking a long run perspective over more than 150 years this book shows the development and the distribution of human capital in the regions of Europe and its connections with the economy It provides insights into recent research findings in this area including theoretical advances and the use of new empirical data

European regional growth Raffaele Paci,Francesco Pigliaru,1997

Poverty and Regional Development in Eastern Europe and Central Asia William R. Dillinger,2007-01-01 Regional economic development is an interest of policymakers throughout the Europe and Central Asia ECA region One of its principal aims is to reduce poverty in lagging regions by stimulating local economic growth However problems exist with this approach First it may miss the target Although geographical concentrations of poverty exist poor people also live in regions that are on average rich Second the sources of the problem may be misdiagnosed Poverty is not only related to where people are but to who people are In ECA poverty is associated with low levels of education and people who are too young or too old to participate in the labor force Under these circumstances efforts to bring higher wage employment opportunities to poor regions may have little immediate benefit for the people who live there Third relying on regional economic development to address poverty in lagging regions ignores the potential role of migration The emigration of labor rather than the immigration of capital may be a more effective means of reducing the poverty of individuals in lagging regions though this is unlikely to eliminate pockets of poverty quickly Development opportunities may exist in poor regions that markets have overlooked Interventions must be assessed carefully Some of the traditional instruments used to stimulate regional economic growth have mixed track records Comprehensive custom tailored approaches appear to be a promising alternative However governments should be modest in using regional development as a tool of poverty reduction Policies aimed at stimulating growth in poor regions should be complemented by more direct anti poverty measures including targeted transfers and investments in education and efforts to remove barriers to emigration

World Bank website Regional Development and Spatial Planning in an Enlarged European Union Neil Adams, 2016-04-01
The expansion of the European Union in 2004 has had significant consequences for both existing and new members of the Union. New member states are assimilating into a new institutional and policy framework while the changing geography of Europe provides a different context for policy development in pre 2004 member states. One of the more important fields in which these changes are impacting is regional development. The admission of the new countries changes patterns of economic and social disparities across the territory of the European Union which in turn demands that existing approaches to regional development are reconsidered. An approach which has proved to be one of the most innovative is spatial planning. This book brings together a team of academics and policy makers from across the new Europe involved in regional development and spatial planning. Providing insights into different approaches it offers a valuable opportunity to compare experiences across European borders.

European Regional Policy and Development María del Carmen Sánchez-Carreira, Paulo Jorge Reis Mourão, Bruno Blanco-Varela, 2023-07-18
The shortcomings of traditional regional policies led to a major policy. Thus regions have become more active in the design and implementation of policies following a bottom up approach and involving the participation of the local community in strategic planning as opposed to the traditional top down method. This book addresses regional development theories and policies with a special focus on forgotten places and raises emerging questions about recent theoretical advances as well as trends and challenges in the field. It examines two main and related issues: the crucial role of regional actors for development and the role of Forgotten Spaces. It emphasizes the spatial territorial approaches from different theoretical perspectives underlining place based approaches and compares the experiences of both successful and failed cases attempting to identify lessons and policy recommendations as well as adding empirical evidence to this field. The different cases presented which focus on Forgotten Spaces allow the reader to assess the role of different actors for regional development as well as some sectoral approaches. While there is a clear focus on European countries with different geographical institutional and sociocultural characteristics the book also examines good and bad examples of regional development and policies related to forgotten places from different regions worldwide including developed and developing countries. The book benefits from contributions from over 20 authors from different nationalities and a rich diversity of case studies, approaches and methods of discussion. The authors discuss practical examples and more complex theoretical approaches involving techniques of spatial analysis, spatial econometrics, social networks, content analysis as well as regional planning techniques. The book will appeal to an interdisciplinary audience and will provide academicians, politicians and policy designers with original and detailed analyses.

EU Regional and Urban Policy Valeria Fedeli, Camilla Lenzi, Paola Briata, Luisa Pedrazzini, 2019-12-07
The book critically reflects on some of the most important novelties and experimentations in the context of the European Union's renewed urban and regional policy in the last programming period 2014-2020. In particular it examines four main innovations characterizing this period which

emerged as a result of the deep rethinking and reorganization of Cohesion Policy in the spirit of the place based approach to local development i.e the development of the smart specialization strategy the establishment of macro regions the focus on the urban dimension as a horizontal priority and the role of social innovation in urban policy Unlike other similar books it analyzes the urban dimension of the reformed EU cohesion policy especially focusing on its interplay with the regional dimension and which has not been fully addressed to date The book is intended for social scientists engaged in research on European issues especially from regional and urban perspectives policy makers particularly at the local level and graduate students interested in regional and urban European matters

Knowledge Spillovers and Economic Growth Marjolein

C. J. Caniëls, 2000 One of the most striking paradoxes of our time has been the growing importance of regions in the face of a globalizing economy This insightful book explains the dynamics of regions in a global economy and sheds light on the role of knowledge in driving regional growth The author examines the way in which regions grow by receiving knowledge from surrounding regions Using evolutionary theory she advances the argument that knowledge spillovers operate locally Computer simulations analyse the impact of knowledge spillovers on economic growth across European regions Finally the author uses new original data on among others patents and research and development to demonstrate differences in economic and innovative activity across regions

The Coherence of EU Regional Policy John Bachtler, Ivan

Turok, 2013-12-16 This book brings together a rich selection of up to date practical experience of EU regional policy from across Europe It provides different perspectives on the design and operation of regional development strategies under the Structural Funds from people closely involved in studying managing or advising on the process at EU national and regional levels It therefore offers a more comprehensive and detailed understanding of the structural policies than has been available hitherto This will prove particularly useful to researchers practitioners and students interested in European regional policies and processes

regions and urban areas have become a primary target of EU Cohesion Policy For a number of European cities especially in the less developed regions this has resulted in a unique opportunity for the implementation of extensive development projects as well as delivering innovations in urban policy and local governance Through the detailed observation of planning processes which took place in four European cities Porto PT Malaga ES Palermo IT and Thessaloniki EL this book explores the different ways that EU intervention can affect the policy process locally from the regeneration of decayed neighbourhoods and the creation of key services for improving the quality of life to the establishment of new governance relations and increasing the institutional capacity in local government The book also provides a critical reflection on the impact of EU urban policy in reducing regional disparities and the extent to which Cohesion Policy has helped cities to open

new pathways for local development With a special focus on the EU's marginal regions this book is a guide to understanding how EU policy has affected urban change and local development across Europe The chapters in this book were originally published as a special issue of the journal *Urban Research Practice* **Convergence, Innovation and Geography** Johanna Vogel, 2011 This thesis contributes to the empirical literature on economic growth across the regions of the European Union using data from 1980 onwards It consists of three main chapters that in turn explore the major theoretical approaches relevant to regional economic growth Chapter 1 studies the effects of allowing for heterogeneous slope coefficients in the Mankiw Romer and Weil 1992 model based on panel data for 193 EU 15 regions from 1980 to 2005 We first estimate the model using conventional pooled panel data estimators allowing at most intercepts to differ across regions Then we relax the restriction of homogeneous slope coefficients by estimating separate time series models for each region using Pesaran and Smith's 1995 mean group estimator To account for spatial dependence we employ the common correlated effects approach of Pesaran 2006 Our analysis indicates important differences across regions in the speed of adjustment to region specific long run paths for the level of income per capita Allowing for heterogeneous coefficients doubles the speed of adjustment to 22% per year on average compared to the homogeneous case which suggests downward bias in the latter We also find a positive and significant effect of the rate of investment although the implied structural parameters are smaller than expected Chapter 3 investigates two channels through which research and development R D and human capital may affect regional total factor productivity growth in the manufacturing sector using panel data on 159 EU 15 regions from 1992 to 2005 Based on the endogenous growth model of Griffith Redding and Van Reenen 2003 we allow R D and human capital to influence productivity growth both directly reflecting own innovation and indirectly reflecting imitation of frontier technology Further the model allows for conditional convergence to a long run level of TFP relative to the frontier and we develop an extension that captures geographically localised technology spillovers Our preferred system GMM estimates provide significant evidence of a positive direct effect of human capital and a positive indirect effect of R D on productivity growth This may be interpreted as lending support to the recent focus of EU regional policy on raising educational attainment and R D expenditures although their channels of influence appear to differ Our results also suggest that TFP convergence has taken place over our sample period and that spillovers are to an extent geographically localised Chapter 4 examines the empirical relationship between agglomeration and economic growth for a panel of 48 Central and Eastern European regions from 1995 to 2006 By agglomeration we mean the within regional concentration of aggregate economic activity which we measure using the topographic Theil index developed by Brillhart and Traeger 2005 The transitional growth specification of Mankiw et al 1992 is augmented with this index and estimated using panel data methods that account for endogeneity and spatial dependence Our empirical analysis provides evidence of a positive effect of agglomeration as measured by the topographic Theil index on long run income levels A one standard deviation increase in agglomeration is estimated to raise steady state

income per capita by 15% While this effect is sizeable it also implies a trade off between regional development and within regional equality for Central and Eastern Europe
