European Stamp Design David H. T. Scott, 1995 Focusing on five European countries this book explores the role that stamps play in shaping and reflecting national identity and the way they reflect the fundamental design developments within their period It reveals how national icons evolve and how commemorative issues reflect fundamental design as well as creative concerns It also highlights the role of the stamp designers showing how many famous artists including M C Escher Hans Erne Edmund Doulac David Gentleman and Eric Gill have contributed to the development of stamp design A whole chapter is devoted to the design of British and French colonial issues      **Poetics of the Poster** David H. T.

Scott, 2010-01-01 This book sets out to explore the way with the onset of a new and integral relationship between text and image the modern poster is able to evolve distinctive persuasive strategies that will transform modern advertising The book shows how this fundamental development is closely related to contemporary developments in the visual arts in particular Futurism and Art Deco and reflects the increasing cross fertilisation and symbiosis between art and graphic design The book focuses in particular on the way conventional textual strategies metaphor metonymy rebus are adapted by the modern poster to produce visual or textual visual equivalents which through their employment of combined pictorial and linguistic elements maximise their attractive or persuasive power over the viewer reader A key aim of the book is to clarify the assumptions on which semiology the study of signs is based in the context of modern poster artists practice The text image relation is explored through five chapters focussing on 1 the rhetoric of image text in general 2 text and image in airline logos British Airways and Air France 3 visual metonymies in boxing posters 4 text and image in posters expressing speed 5 text image in Swiss tourist posters There are approximately 120 colour illustrations arranged in groups that reflect the different orientations of the chapters      Networks of Design Jonathan Glynn, Fiona Hackney, Minton, Viv, 2010-06 Networks of Design maps a new methodological territory in design studies conceived as a field of interdisciplinary inquiry and practice informed by a range of responses to actor network theory It brings together a rich body of current work by researchers in the social sciences technology material culture cultural geography information technology and systems design and design theory and history This collection will be invaluable to students and researchers in many areas of design studies and to design practitioners receptive to new and challenging notions of what constitutes the design process Over ninety essays are thematically organised to address five aspects of the expanded notions of mediation agency and collaboration posited by network theory Ideas Things Technology Texts and People The collection also includes an important new essay on rethinking the concept of design by Bruno Latour one of the most influential figures in the philosophy and sociology of science and technology and a pioneer of actor network theory and essays deriving from forum discussions involving designers and designer makers responsive to actor network theory Rather than an anthology of previously published essays Networks of Design presents work in progress on design theory and its applications It is the outcome of a live and vigorous debate on the

possibilities and actualities offered by actor network led conceptualisations of the relationships and processes constituting design All the essays many collaborative derive from papers presented at the international conference of the Design History Society held at University College Falmouth UK in the Autumn of 2008      **Advances in Design and Digital**

James Elkins, 2018-08-06 In the domain of visual images those of fine art form a tiny minority This original and brilliant book calls upon art historians to look beyond their traditional subjects painting drawing photography and printmaking to the vast array of nonart images including those from science technology commerce medicine music and archaeology Such images James Elkins asserts can be as rich and expressive as any canonical painting Using scores of illustrations as examples he proposes a radically new way of thinking about visual analysis one that relies on an object's own internal sense of organization Elkins begins by demonstrating the arbitrariness of current criteria used by art historians for selecting images for study He urges scholars to adopt instead the far broader criteria of the young field of image studies After analyzing the philosophic underpinnings of this interdisciplinary field he surveys the entire range of images from calligraphy to mathematical graphs and abstract painting Throughout Elkins blends philosophic analysis with historical detail to produce a startling new sense of such basic terms as pictures writing and notation *Cultural Icons* Keyan G Tomaselli, David Scott, 2018-10-24 The Eiffel Tower this symbol of industrial development and the French Republic is now associated with a romantic vacation in Paris Nelson Mandela the hero of the struggle against apartheid was featured in a British Airways magazine article called The Power of Brand Mandela This book explores these and other contemporary cultural icons that over time have been endowed with a complex and powerful layering of meanings The authors analyze the way in which such icons whether objects or persons living or mythical are constructed and disseminated They also critically investigate the implications in semiotic and cultural terms of the accretion of meaning and popular recognition attached to them their moral and aesthetic ambiguity and their enduring appeal to a fascinated public This slim and provocative volume is ideal for courses in and related to cultural studies *Inventing the Mathematician* Sara N. Hottinger, 2016-03-01 Where and how do we as a culture get our ideas about mathematics and about who can engage with mathematical knowledge Sara N Hottinger uses a cultural studies approach to address how our ideas about mathematics shape our individual and cultural relationship to the field She considers four locations in which representations of mathematics contribute to our cultural understanding of mathematics mathematics textbooks the history of mathematics portraits of mathematicians and the field of ethnomathematics Hottinger examines how these discourses shape mathematical subjectivity by limiting the way some groups including women and people of color are able to see themselves as practitioners of math *Inventing the Mathematician* provides a blueprint for how to engage in a deconstructive project revealing the limited and problematic nature of the normative construction of mathematical subjectivity *The American Stamp* Laura Goldblatt, Richard Handler, 2023-02-13 More than three thousand different images appeared on United States postage stamps from the middle of the nineteenth century to the end of the twentieth Limited at first to the depiction of a small cast of characters and patriotic images postal iconography gradually expanded as the Postal Service sought to depict the country's history in all its diversity This vast breadth has helped make stamp collecting a widespread hobby and made stamps into consumer goods in their own right

Examining the canon of nineteenth and twentieth century American stamps Laura Goldblatt and Richard Handler show how postal iconography and material culture offer a window into the contested meanings and responsibilities of U S citizenship They argue that postage stamps which are both devices to pay for a government service and purchasable items themselves embody a crucial tension is democracy defined by political agency or the freedom to buy The changing images and uses of stamps reveal how governmental authorities have attempted to navigate between public service and businesslike efficiency belonging and exclusion citizenship and consumerism Stamps are vehicles for state messaging and what they depict is tied up with broader questions of what it means to be American Goldblatt and Handler combine historical sociological and iconographic analysis of a vast quantity of stamps with anthropological exploration of how postal customers and stamp collectors behave At the crossroads of several disciplines this book casts the symbolic and material meanings of stamps in a wholly new light
