European Technological Collaboration:

European Technology Roger Williams, 2022-08-30 First published in 1973 European Technology analyses the possibilities for cooperation and collaboration and suggests how the technology gap between Europe and the United States can be bridged Concentrating mainly on aerospace nuclear and computer fields Roger Williams looks at the aspirations and achievements in technological cooperation both within the EEC and without How can commitment to joint projects be generated What are the internal managerial and external political problems associated with joint action How will technological collaboration contribute to wider European economic and political integration The strength of the European economy will depend to a large extent on improved technological and industrial cooperation This book provides the first theoretical foundation for policy making in this vital field This book is a must read for scholars and researchers of European politics European history and British politics European Technological Collaboration Margaret Sharp, Claire

Shearman, 2025-12-29 European Technological Collaboration 1987 traces the response to international technological competition by European industries and governments in promoting greater collaboration both in research and development and in new manufacturing and marketing initiatives It examines the relative position of European industry in high technology sectors and the move towards collaboration on the part of industrialists and governments and it covers European Community programmes such as Esprit Race Brite and Eureka It concludes with a critique of the case for and against collaboration at a European level asking how far it is actually promoting greater competitiveness and how far governments should be actively promoting European as distinct from multinational collaboration European Technological Collaboration Federal Trust for Education and Research, 1970 **Technological Collaboration in Industry** Mark Dodgson, 2018-03-26 This volume

originally published in 1993 is based on extensive research and draws together a selection of detailed global case studies illustrating a variety of issues from Japanese joint ventures to small business development It considers the scope and scale of collaboration in order to assess the way successful companies have achieved their growth The book presents a synthesis of business functions and economic analysis and asks what the implications for skills development are what effect public policy has how far such ventures can go and what decision making processes are involved Europe 1992 and Its Effects on U.S. Science, Technology, and Competitiveness United States. Phillips, 2018-10-26 This book first published in 1989 compares contrasts and evaluates the nature scale and direction of industry academic interactions in Britain and Japan the conversion of academic discoveries into practical products Japan shows its outstanding ability to translate scientific ideas into high technology products Within this wider investigation detailed consideration is given to the manner in which these interactions promote innovation and technology transfer The information in this study provides a perspective against which decisions can be made about industry education interaction arrangements and much of this information is largely unavailable outside Japan **Challenges for Europe in the World, 2030** John Eatwell, Terry McKinley, 2016-04-15 Challenges for Europe in the World 2030 embodies critical thinking about the long term implications for Europe of the clear shift of power from the West to the East and the South Designed as a multi faceted project this book presents an integrated assessment covering a wide range of policy areas and alternative assumptions about trends in global and European governance In order to reach this ambitious objective in a comprehensive and consistent way several types of quantitative and qualitative approaches have been combined a model of macro regions of the world economy an institutional perspective and lessons from foresight studies With a strong focus on policy implications the book is introduced by an executive summary which outlines the project assumptions especially on the future of Europe in the context of the current economic crisis and of the emergence of a new balance of powers in the global economy Subsequent chapters cover the regulation of finance trade and technology developments environmental sustainability employment conditions and population wellbeing The book concludes with an assessment of the extent to which these developments are likely to lead to significant political changes in Europe In sum this book challenges public policy makers to

re assess their thinking in shaping Europe's future

European Advanced Technology Christopher Layton, 2021-08-07

First published in 1969 *European Advanced Technology* expounds a programme of action for Europe to tackle the challenge posed by American technology in the 1960s. It analyses first the nature of the American predominance in science and technology and goes on to describe the efforts of the major European states to counter it on their own. It then explains the limitations of these efforts at the level of the nation state and shows how European countries have gone on to work together in certain key sectors: high energy physics, nuclear power, aircraft, space, electronics, transport and communications. The history of these programmes is examined carefully and the book describes a wider strategy. It deals with larger questions like how Europe can develop a common science and technology policy, what should be done to promote industrial integration and European companies and what individual companies and the British government can and should do. This book will be an essential read for scholars and researchers interested in the history of European Union, European history, international organisations and European Politics. *Official Text*, 1967. *Britain, Europe and Civil Nuclear Energy, 1945-62* Martin Theaker, 2018-03-15. This book examines the role played by civil nuclear energy in Britain's relationship with Europe between the end of the Second World War and London's first application to join the European Communities. Tracing the development of the British nuclear programme as it emerged as a global leader in constructing the world's first atomic power stations, it analyses how the threat of energy shortages throughout the 1950s presented ministers with a golden opportunity to utilise nuclear cooperation as an instrument to influence the political shape of Europe. Importantly, this book will show how this chance was missed by ministers due to a combination of disorganization and diplomatic pressure as well as a perennial lack of domestic resources. In so doing, this book joins the long disconnected historiographies of European integration and nuclear energy to offer a new perspective on both scholarly fields.

Governing European Communications Maria

Michalis, 2007-10-08. The liberalization of communications markets especially from the 1980s onward has witnessed increased regulatory activity within but also above the national state. By examining the European case concentrating on the European Union, the most advanced example of regionalism, *Governing European Communications* enhances understanding of the trend toward above the national state regulation, its drivers and its limitations. Analyzing in detail the origins, dynamics and evolution of European level communications governance in the postwar era, Michalis offers a single comprehensive and up to date account of telecommunications and television policies and regulation and their technological convergence.

European Union Research Policy Veera Mitzner, 2020-06-01. This book describes the emergence of research policy as a key competence of the European Union (EU). It shows how the European Community (EC), the predecessor of the EU, which initially had very limited legal competence in the field, progressively developed a solid policy framework presenting science and research as indispensable tools for European economic competitiveness and growth. In the late 20th century, Western Europe, hungry for growth, concerned about the American technological lead and keen to compete in the increasingly open

international markets the argument for a joint European effort in science and technology seemed plausible However the EC was building its new functions in an already crowded field of European research collaboration and in a shifting political context marked by austerity national rivalries new societal and environmental challenges and emerging ambivalence about science This book conveys the contested history of one of the EU s most successful policies It is a story of struggle and frustration but also of a great institutional and intellectual continuity The ideational edifice for the EC EU research policy that was put in place during the 1960s and 1970s years proved remarkably robust Its durability enabled the rapid takeoff of the European Commission s initiatives in the more favorable political atmosphere of the early 1980s and the subsequent expansion of the EU research funding instruments and programs that permanently transformed the European research landscape

Technology, Culture and Competitiveness Christopher Farrands, Michael Talalay, Roger Tooze, 2005-06-29 The first volume in a major new series this book will be an essential read for all those who need to deal with the causes and consequences of rapid technological change in an increasingly globalized world whether they be government policy makers managers of multi national corporations commentators on the international scene or specialists in and students of international politics economics and business studies The authors discuss three related areas How do we think about technology and international relations international political economy How does technology relate to competitiveness How does it influence our culture and how is it influenced by it In what sense is technology a fundamental component of national competitive advantage and what ought national local and corporate policy to be in the light of this What is the relationship between technological innovation and global political and economic change Technology is discussed not just in an instrumental sense as a tool of power and an object of policy but equally in a transcendental sense as a key to shaping and structuring how we understand and interpret reality The final section of the book presents case studies of three core sectors of the world political economy finance aviation and automobiles

Changing Governance of Research and Technology Policy Jakob Edler, Stefan Kuhlmann, Maria Behrens, 2003-01-01 This collection analyses and comments on the development of the ERA which seeks to co ordinate national research and advance European wide projects The contributors include leading scholars of European integration and technology policy and high level administrators They discuss the potential impacts benefits and limits to research and innovation policy within Europe both in the short and long term Moreover the debate about ERA is placed firmly in the context of the overall changes at the European level
