Increasingly, virtual environments are being used in educational and training applications. As with other types of applications that use virtual environments, these scenarios must be evaluated in terms of user experience. However, they also should be evaluated on the efficacy of the training or learning provided, so as to ensure learning transfer. Frameworks, such as the Kirkpatrick Model, exist to evaluate training scenarios, but application of these frameworks has not been fully utilized in development of virtual environment-based education and training. To address this gap and to also share our process with other virtual environment developers, we discuss our experience applying the Kirkpatrick Model to an existing virtual human (VH) application for medical communication skills training. The Kirkpatrick Model provides different levels of evaluation for training programs that include learners' reactions to the training, the knowledge acquired from the training, behaviors indicating the training was applied, and the degree high-level results were impacted as a result of the training. While we discuss all of the Model's levels, our focus for this work is Level 3 Behavior. The Kirkpatrick Model currently recommends that behavioral change may only be measured while a trainee is working in a real-world context. However, given existing evidence that VH applications have been shown to elicit real-world behaviors from participants, we suggest that VH training scenarios may be a method of measuring Behavior level metrics before trainees are evaluated *in situ*. Initial support for this suggestion is provided by our study examining whether VHS can elicit changes in communication skills learners' message production behavior over time. This study indicates that learners displayed changes in several metrics over the course of the semester. Based on this finding, we suggest a direction for future research: observing learner behavior in a virtual environment as a pre-cursor to behavioral measures while in a real-world scenario.

The recent trend in innovative school design has provided exciting places to both learn and teach. New generation learning environments have encouraged educators to unleash responsive pedagogies previously hindered by traditional classrooms and has allowed students to engage in a variety of learning experiences well beyond the traditional chalk and talk common in many schools. These spaces have made cross disciplinary instruction collaborative learning individualised curriculum ubiquitous technologies and specialised equipment more accessible than ever before. The quality of occupation of such spaces has also been encouraging. Many learning spaces now resemble places of collegiality intellectual intrigue and comfort as opposed to the restrictive and monotonous classrooms many of us experienced in years past. These successes however have generated a very real problem. Do these new generation learning environments actually work and if so in what ways? Are they leading to the sorts of improved experiences and learning outcomes for students they promise? This book describes strategies for assessing what is actually working. Drawing on the best thinking from our best minds, doctoral students tackling the challenge of isolating space as a variable within the phenomenon of contemporary schooling, *Evaluating Learning Environments* draws together thirteen approaches to learning environment evaluation that capture the latest thinking in terms of emerging issues, methods and knowledge.

Smith, Anthony D. Pellegrini, 2000 Applied Ecological Psychology for Schools Within Communities Jody L. Swartz, William E. Martin, Jody L. Swartz-Kulstad, 2013-01-11 This volume provides a thorough examination of the interplay between individuals and their environment in the development and maintenance of problem behaviors and delineates procedures for conducting assessment intervention and prevention within the child s ecosystem As individuals structure change and organize their environments their environments work to do the same Environmental or contextual and individual variables act reciprocally to shape an individual s behavior For school aged youth this reality necessitates an ecological approach to assessment intervention and prevention Specifically problem behaviors are partly developed and maintained by a combination of factors present in the child s psychosocial ecosystem home school and community Although there is an abundance of theoretical applications and research supporting this concept the predominant trend has been to emphasize the properties of the person As a result one is left to assume that the genesis of difficulties in adaptation lies in internal or personal states and traits of the individual In contrast to traditional psychology theories which focus primarily on the

individual incorporation of ecological psychology concepts allows for a more comprehensive and in depth analysis of sources contributing to the individual's ability to adapt to their psychosocial environment. Ecological theories which drive assessment, intervention and prevention efforts provide the necessary framework for assisting school aged youth and their associated ecological networks to cope with and overcome the multidetermined, multifaceted concerns that arise during the school years. However, this is an often difficult and cumbersome task for educators, parents and school systems to undertake. To this end, this volume focuses on the functional application of ecological psychology for schools within communities. Each of the 10 chapters, written by key figures in school, family, counseling and community psychology, explores the use of ecological theory from a different perspective, ranging from focus on the child, the child within the classroom, the classroom teacher and the community to considerations in working with special populations such as juvenile delinquents and in planning for developmental issues such as school to work transition. The final chapter summarizes and integrates the previous chapters and provides suggestions for future directions in the field.
