Stakeholder-oriented Valuation to Support Water Resources Management Processes Leon Hermans, Food and Agriculture Organization of the United Nations, 2006-01-01 Today raising capacity in water resources management entails supporting stakeholders and decision makers to reach a common understanding on the priorities and necessary arrangements for sharing and allocating water related goods and services Valuation is central to this process as setting priorities and making choices implies valuing certain uses and arrangements above others Water valuation can help stakeholders to express the values that water related goods and services represent to them It also offers a means for conflict resolution and planning informing stakeholders supporting communication and facilitating joint decision making on priorities and specific actions This report confronts concepts from the literature on water valuation with practical experiences from three local cases where an effort was made to embed existing valuation tools and methods in ongoing water resources management processes It uses the lessons from this exploration to provide a first outline for a stakeholder oriented water valuation process This is expected to provide a useful starting point to help water professionals and policy makers improve the use of water valuation as a means to support participatory processes of water resources management

Reindeer Management in Northernmost Europe Bruce C. Forbes, Manfred Bölter, Ludger Müller-Wille, Janne Hukkinen, Felix Müller, Nicolas Gunsley, Yulian Konstantinov, 2006-03-09 The findings presented in this volume represent a concerted effort to develop a more inclusive form of reindeer management for northernmost Europe Our guiding principle has been to foster a new paradigm of participatory research We wish to move beyond the historical reliance on western approaches to basic and applied science These have been concerned primarily with interactions between herded animals and the various components of their biophysical environment e.g. plants insects predators climate and others In our view sociocultural and economic drivers along with herders experience based knowledge gain equal currency in the effort to understand how management may mitigate against the negative aspects of the challenges modern herding faces while also exploring concepts of sustainability from different perspectives see also Jernsletten and Klokov 2002 Kankaanpää et al 2002 Ulvevadet and Klokov 2004 This broadening of the pool of disciplines and local national and international stakeholders in policy relevant research invariably complicates virtually all aspects of the research process Multidisciplinary or in our sense transdisciplinary approaches also require extraordinary effort from all participants if they are to succeed As such those approaches should not be undertaken lightly nor without

personnel who possess appropriate experience in cooperating with those of different disciplines and preferably also with relevant practitioners and public social and administrative institutions In such settings the potential for misunderstandings is quite high Creating System Innovation H. de Bruijn,H. van der Voort,W. Dicke,M. de Jong,W. Veeneman,2004-04-15

System innovation is a radical change of institutions structures and values concerning one or more entire sectors This publication from the Consultative Committee of Sectorcouncils for Research and Development in the Netherlands draws conclusions about the possible role of governments when system innovation is predominantly emergent questionin

Sustainability Networks Janne Hukkinen,2008-08-18 Sustainability is a word that means different things depending on who is using it thus underlining the potential problems involved in experts from different fields teaming up to tackle sustainability problems In this book Janne Hukkinen argues for a reflexive approach to sustainability as a means of coming to grips with the threatening challenges arising out of human environment interaction The author illustrates his argument with a case study of natural resource management in Lapland showing how sustainability is understood holistically by academics and professionals alike This book reflects an emerging cognitive turn in sustainability sciences conceptualizing environmental challenges during action on our social and material environments rather than in isolation Hukkinen argues that this conceptual blending enables sustainability experts to hybridize themselves to immerse themselves in the fields of other experts and imagine the other s work both prerequisites of trans disciplinary knowledge integration This book shows how sustainability experts can reveal their intellectual engagements when designing scenarios and indicators and presents a rigorous framework for organizing expert collaboration *Valuation of Ecological Resources* Ralph G.
