Landscape Ecology of Small Mammals Gary W. Barrett, John D. Peles, 1999-06-04 A summary of much of the experimental work on the spatial ecology of small mammals This field has entered an exciting stage with such new techniques as GIS and systems modeling becoming available Leading contributors describe and analyze the most well known case studies and provide new insights into how landscape patterns and processes have had an impact on small mammals and how small mammals have in turn affected landscape structure and composition

Ecology of Small Mammals David Michael Stoddart, 1979 Eight authors have written authoritative reviews aimed at rodent control workers conservationists and mammalogists Includes chapters on life history strategies population dynamics and the role of small mammals in ecosystems as reservoirs of disease and as agricultural pests

Ecology of Small Mammals of Desert & Montane Ecosystems I. Prakash, Pratap Singh, 2005-06-01 Small mammals Rodents and Insectivores constitute 31 18% of total mammal species found in India In spite of their abundance this largest group among mammals has received little attention of ecologists From the geomorphological standpoint Rajasthan offers multiple possibilities The Aravallis diagonally bisect the state into western arid and eastern semi arid and mesic zones The southern and southeastern parts of state have various rock systems Present book is an endeavour to cover small mammals of the whole state The book is first of its kind in India which takes into account habitat preference food and feeding behaviour home range activity pattern reproductive behaviour biochemical communication and physiology of small mammals of desert and hilly terrain It also includes zoogeography of small mammals found in Rajasthan and changes in faunistic composition being brought by canal and tube well irrigation It is expected that book will be quite useful for students researchers and teachers of Ecology and Zoology

Ecology of small mammals D.M. Stoddart, 2012-12-06 From their largely descriptive beginnings about a half century ago studies on the ecology of small mammals have mushroomed in number scope content and complexity Yet strangely or perhaps not so strangely if one considers the extent and complexity of ecological interactions the main problems for which the early workers sought answers still defy complete analysis and basic hypotheses remain untested if not even untestable The same holds true for so many branches of animal ecology that it seems to be the complexity of the concepts that frustrates efforts rather than the subject species Like all branches of science small mammal ecology has been subject to a series of fashionable approaches one following another as technology penetrates previously impregnable regions Doubtless the future development of our science will be punctuated by wave upon wave of new endeavour in whole fields that are perhaps even yet unidentified Answers to the complex questions which ecologists ask do not come easily Increasingly though they arise in direct proportion to the efforts expended upon their elucidation Many studies have achieved such a high level of elegance in terms of manpower and apparatus that there is a feeling that questions asked when such resources are unavailable are not worth asking Nothing could be further from the truth Many a complex model has failed fully to explain the phenomenon for which it

was constructed because of a lack of basic field data on the species natural history

Animal Dispersal N.C. Stenseth, W.Z. Lidicker, 2012-12-06 4 1 1 Demographic significance Confined populations grow more rapidly than populations from which dispersal is permitted Lidicker 1975 Krebs 1979 Tamarin et al 1984 and demography in island populations where dispersal is restricted differs greatly from nearby mainland populations Lidicker 1973 Tamarin 1977 1978 Gliwicz 1980 clearly demonstrating the demographic significance of dispersal The prevalence of dispersal in rapidly expanding populations is held to be the best evidence for presaturation dispersal Because dispersal reduces the growth rate of source populations it is generally believed that emigration is not balanced by immigration and that mortality of emigrants occurs as a result of movement into a sink of unfavourable habitat If such dispersal is age or sex biased the demography of the population is markedly affected as a consequence of differences in mortality in the dispersive sex or age class Habitat heterogeneity consequently underlies this interpretation of dispersal and its demographic consequences although the spatial variability of environments is rarely assessed in dispersal studies

Management of Amphibians, Reptiles, and Small Mammals in North America Robert C. Szaro, Kieth E. Severson, David R. Patton, 1988 Historically the management of public lands from a multiple use perspective has led to a system that emphasizes those habitat components or faunal elements that primarily resulted in some sort of definable economic value While this often benefitted other species that were not even considered in the original prescriptions it also negatively impacted others We no longer can afford to take this simplistic view of ecosystem management We need to use a more holistic approach where ecological landscapes are considered as units and land management practices incorporate all elements into an integrated policy This includes examining the impacts of proposed land uses on amphibian reptile and small mammal populations
