provides a review of economic diversification experiences including policy environment diversification strategies desired outcomes the role of government and a critical evaluation of achievements This book is suitable for those who study environmental economics development economics and resource management Resource Abundance and Economic Development R. M. Auty, 2001-06-28 Since the 1960s the per capita incomes of the resource poor countries have grown significantly faster than those of the resource abundant countries In fact in recent years economic growth has been inversely proportional to the share of natural resource rents in GDP so that the small mineral driven economies have performed least well and the oil driven economies worst of all Yet the mineral driven resource rich economies have high growth potential because the mineral exports boost their capacity to invest and to import Resource Abundance and Economic Development explains the disappointing performance of resource abundant countries by extending the growth accounting framework to include natural and social capital The resulting synthesis identifies two contrasting development trajectories the competitive industrialization of the resource poor countries and the staple trap of many resource abundant countries The resource poor countries are less prone to policy failure than the resource abundant countries because social pressures force the political state to align its interests with the majority poor and follow relatively prudent policies Resource abundant countries are more likely to engender political states in which vested interests vie to capture resource surpluses rents at the expense of policy coherence A longer dependence on primary product exports also delays industrialization heightens income inequality and retards skill accumulation Fears of Dutch disease encourage efforts to force industrialization through trade policy to protect infant industry The resulting slow maturing manufacturing sector demands transfers from the primary sector that outstrip the natural resource rents and sap the competitiveness of the economy The chapters in this collection draw upon historical analysis and models to show that a growth collapse is not the inevitable outcome of resource abundance and that policy counts Malaysia a rare example of successful resource abundant development is contrasted with Ghana Bolivia Saudi Arabia Mexico and Argentina which all experienced a growth collapse The book also explores policies for reviving collapsed economies with reference to Costa Rica South Africa Russia and Central Asia It demonstrates the importance of initial conditions to successful economic reform **Progressive Policies for Economic Development** Alfredo Saad-Filho, 2021-07-28 Despite the unprecedented gravity of the challenges posed by global warming most political systems have not given them the required priority The oil industry has resisted and many countries have taken only token measures to reduce emissions and mitigate the worst effects In this context this book examines the progressive options available to today's developing countries as they face the limitations of neoliberalism and the existential challenge of global warming Examining the cases of both low income fossil fuel dependent economies and large middle income economies this book argues that for all developing economies the best way forward includes green macroeconomic policies articulated with progressive industrial and social policies thus allowing these countries to achieve economic diversification build alternative

drivers of growth and deliver improvements in the distribution of income wealth and power There is urgent need for this progressive policy agenda grounded on heterodox economics committed to social integration and the reduction of multiple inequalities to improve the economic outcomes for these countries improve the lives of citizens and meet global climate targets The book argues that capitalism challenges the possibility of free and dignified existence while climate change challenges the possibility of life itself and that these challenges must be confronted together Since neoliberal capitalism will not adopt the necessary policies to reduce carbon emissions rapidly it must be overthrown not only for ethical or logical reasons or to shift to better arrangements for the functioning of society but in order to preserve the conditions for life itself This agenda for progressive economic development is essential reading for anyone interested in heterodox economics development studies international politics international relations and sustainable business Managing the Impact of Resource Booms on the Real Effective Exchange Rate: The Role of Financial Sector Development Han
