Handbook of Economic Psychology W.F. Van Raaij,G.M.

van Veldhoven,K.E. Wärneryd,2013-03-09 The idea to publish a Handbook of Economic Psychology came up as a natural consequence of a discussion concerning appropriate reading material for courses in economic psychology The discussion took place a few years ago in the Department of Economic Psychology at Tilburg University The Netherlands It was noted that there was a surprising lack of collections of pertinent readings to say nothing about the lack of textbooks in the English language So the present editors who had been involved in the discussion decided to start working on a Handbook The situation has changed quite a lot since then There are now a number of books internationally available in the English language in economic psychology or behavioral economics The interest in this field of study is expanding quite impressively The Journal of Economic Psychology is now 1988 in its ninth volume and many other journals are publishing articles in the field The application of psychological theories and methods to economic problems or the study of economic experiences and behavior is variously referred to as economic psychology or behavioral economics While in principle we do not want to overdo the differences between the two we have a feeling that economic psychology has a slightly stronger flavor of psychology than behavioral economics which in its turn seems to be closer to economics Psychologists tend to feel more at home in economic psychology while economists seem to favor behavioral economics

Economic Psychology and Experimental Economics Simon Kemp, Gabrielle Wall, 2013-08-21. The last ten years have seen an enormous surge of interest in issues that are common to psychology and economics. How do people make decisions about economic issues? How should they make such decisions? Does public policy or regulation succeed in its aim of helping people make these decisions? What situations aid cooperation? This volume explores some of the ways in which economists and psychologists have tried to answer these questions. The authors are an international mix of economists and psychologists, and as such they demonstrate a diverse range of approaches to tackling different aspects of these issues. This is a frontier area for both psychology and economics, and consequently it is relatively free, lawless, and above all exciting. This collection reflects the diversity and energy that characterise this rapidly growing interdisciplinary field. This book was originally published as a special issue of *New Zealand Economic Papers*.

Psychology in Economics and Business G. Antonides, 2014-03-14. A number of books on economic psychology have appeared in the past few years. The most recent publications are by MacFadyen and MacFadyen (1986), Furnham and Lewis (1986), Lea et al (1987), and Van Raaij et al (1988). Why produce yet another book for this discipline? This question can be answered in various ways. In a sense, this book is the answer in itself. Its presentation of research and theories is innovative in this field, at least to my knowledge. It attempts to structure the many theories emerging in the interdisciplinary science of economic psychology and to explain the background of the research. The second answer is pragmatic. In our introductory course of economic psychology for economics students at Erasmus University Rotterdam, we

used several of the above mentioned books Our experience with this material is that when preparing our lectures we had to explain many additional theories and experiments to our students furthermore diagrams figures and examples had to be culled from other sources or made by ourselves It is not my intention to run down these publications since I think they provide an excellent treatment of a number of topics by specialists in economic psychology The plan for the present book however emerged from our need to present an integrated introductory course for our students

Behavioural Economics

David Orrell, 2021-01-07 The controversial science that claims to have revolutionised economics For centuries economics was dominated by the idea that we are rational individuals who optimise our own utility Then in the 1970s psychologists demonstrated that the reality is a lot messier We don't really know what our utility is and we care about people other than ourselves We are susceptible to external nudges And far from being perfectly rational we are prone to cognitive biases with complex effects on decision making such as forgetting to prepare for retirement David Orrell explores the findings from psychology and neuroscience that are shaking up economics and that are being exploited by policy makers and marketers alike to shape everything from how we shop for food to how we tackle societal happiness or climate change Finally he asks is behavioural economics a scientific revolution or just a scientific form of marketing
