**The Bioregional Economy** Molly Scott Cato, 2013 In a world of climate change and declining oil supplies what is the plan for the provisioning of resources Green economists suggest a need to replace the globalised economy and its extended supply chains with a more local economy But what does this mean in more concrete terms How large is a local economy how self reliant can it be and what resources will still need to be imported The concept of the bioregion developed and popularised within the disciplines of earth sciences biosciences and planning may facilitate the reconceptualisation of the global economy as a system of largely self sufficient local economies A bioregional approach to economics assumes a different system of values to that which dominates neoclassical economics The global economy is driven by growth and the consumption ethic that matches this is one of expansion in range and quantity

Goods are defined as scarce and access to them is a process based on competition The bioregional approach challenges every aspect of that value system It seeks a new ethic of consumption that prioritises locality accountability and conviviality in the place of expansion and profit it proposes a shift in the focus of the economy away from profits and towards provisioning and it assumes a radical reorientation of work from employment towards livelihood This book by leading green economist Molly Scott Cato sets out a visionary and yet rigorous account of what a bioregional approach to the economy would mean and how to get there from here

*The Sustainability Curriculum* John Blewitt, Cedric Cullingford, 2013-06-17 The links between education and sustainable development are deepening although subject to much controversy and debate The success of the sustainability discourse depends both on the pedagogic and research functions of higher education Similarly for higher education itself to remain relevant and engaged it faces pressure not only to integrate the insights and lessons drawn from the perspective of sustainable development but also to be responsive to scrutiny of its own practices in relation to sustainability Among professionals in higher education sustainable development has its supporters and detractors It is embraced by some individuals and departments while being perceived by others as a threat to the coherence of particular disciplines Although it is not currently an academic discipline in its own right increasing public and professional familiarity with the term and the increasing urgency of global calls for the implementation of sustainable development mean that this is rapidly changing This volume analyses the impact of the concepts and practices of sustainability and sustainable development on various academic disciplines institutional practices fields of study and methods of enquiry The contributors drawn from a wide range of disciplines perspectives educational levels and institutional contexts examine the purpose of the modern university and the nature of sustainable education which includes exploring links to social movements for sustainability projects curriculum change culture and biodiversity values relating to gender equality and global responsibility and case studies on the transformation or otherwise of some specific disciplines
