life the questions arise Where are we potentially heading and perhaps more importantly where should we be heading The final chapter provides an extensive review of different answers to these questions Describing theories and approaches that highlight science technology culture human psychology and religion among other areas of focus as well as integrative views which attempt to provide big pictures of all aspects of human life the book provides a rich and broad overview of contemporary ideas and visions about the future In the conclusion Dr Lombardo assesses and synthesizes these myriad perspectives proposing a set of key ideas central to understanding the future This book completes the study of future consciousness begun in its companion volume The Evolution of Future Consciousness These two volumes rich in historical detail and concise observations on the interrelatedness of a wide range of interdisciplinary topics are a significant contribution to the field of future studies and a valuable resource for educators consultants and anyone wishing to explore the significance of thinking about the future

Terlizze, 2009-01-10 Trajectory of the Twenty first Century explores what many prophets of the twentieth century such as Oswald Spengler Paul Tillich Aldous Huxley Jacques Ellul and others have predicted would transpire in the current century Their vision included an out of control technological system and a return to religious sentiment that will ultimately undermine the system to which it is reacting This book aims to accurately present their positions and draw certain logical conclusions from them that pertain to the course of history in our time The book's theme argues that modernity is a secularized version of millennial Christianity which reaches its fullest development in the twenty first century and will regress into what Russian philosopher Nicholas Berdyaev called the new Middle Ages or a new religious period This will mean the twilight of modern technological society as its values of rationalism give way to a post-rationalist society Ironically decline will come through further technological advance Omnicide threatens through religious world war driven by transcendent values and modern weaponry Jihadist thinking and posthumanist technology both establish the omnicidal mentality New technologies such as genetic engineering and artificial intelligence created under millennial inspiration to reach for immortality could potentially bring an end to the human species either through a slow steady obsolescence or through environmental catastrophe The titanic forces of technological progress and regress are on a direct collision course in the twenty first century

Alternative Universities David J. Staley,2019-03-26 Imagining the universities of the future How can we re envision the university Too many examples of what passes for educational innovation today MOOCs especially focus on transactions on questions of delivery In Alternative Universities David J Staley argues that modern universities suffer from a poverty of imagination about how to reinvent themselves Anyone seeking innovation in higher education today should concentrate instead he says on the kind of transformational experience universities enact In this exercise in speculative design Staley proposes ten models of innovation in higher education that expand our ideas of the structure and scope of the university suggesting possibilities for what its future might look like What if the university were designed around a curriculum of seven broad cognitive skills or as a series of global gap year experiences What if as a condition of matriculation students had to major in three disparate subjects What if the university placed the pursuit of play well above the acquisition and production of knowledge By asking bold What if questions Staley assumes that the university is always in a state of becoming and that there is not one idea of the university to which all institutions must aspire This book specifically addresses those engaged in university strategy university presidents faculty policy experts legislators foundations and entrepreneurs those involved in what Simon Marginson calls

university making Pairing a critique tempered to our current moment with an explanation of how change and disruption might contribute to a new golden age for higher education Alternative Universities is an audacious and essential read
