**Fuzzy, Holographic, and Parallel Intelligence** Branko Soucek,The IRIS Group,1992-05-06 This important volume introduces you to the new wave of applied intelligent systems that are able to deal with the complex fuzzy noisy and highly varying problems found today in everything from manufacturing to intelligent database tasks The sixth generation advanced hardware and software solutions in this innovative groundbreaking work open up new vistas in computing processing and reasoning by associations You ll find major breakthroughs in machine cognition speed up factors of 10 to 100 compared to other learning paradigms are achievable novel solutions to the enfolding of very large sets of fuzzy associations using holographic neural technology including a novel information representation solution employing a vector orientation on a Riemann plane a description of neural fuzzy hybrids a new class of associative systems and cellular processors a full spectrum of techniques and algorithms to vastly enhance performance in such key computer processes as scientific and technical data processing natural language generation and cognition fuzzy processing in reasoning decision making robotics and process control computer vision and graphics and pattern identification and recognition Computer engineers software designers managers and students will find a range of newly developed intelligent modules systems and methods never before gathered under one cover plus previously unpublished work from the renowned international IRIS Integration of Reasoning Informing and Serving Group Fuzzy Holographic and Parallel Intelligence is the sixth generation breakthrough     <u>Fuzzy, Holographic, and Parallel Intelligence</u> Branko Soucek,The IRIS Group,1992-05-06 This important volume introduces you to the new wave of applied intelligent systems that are able to deal with the complex fuzzy noisy and highly varying problems found today in everything from manufacturing to intelligent database tasks The sixth generation advanced hardware and software solutions in this innovative groundbreaking work open up new vistas in computing processing and reasoning by associations You ll find major breakthroughs in machine cognition speed up factors of 10 to 100 compared to other learning paradigms are achievable novel solutions to the enfolding of very large sets of fuzzy associations using holographic neural technology including a novel information representation solution employing a vector orientation on a Riemann plane a description of neural fuzzy hybrids a new class of associative systems and cellular processors a full spectrum of techniques and algorithms to vastly enhance performance in such key computer processes as scientific and technical data processing natural language generation and cognition fuzzy processing in reasoning decision making robotics and process control computer vision and graphics and pattern identification and recognition Computer engineers software designers managers and students will find a range of newly developed intelligent modules systems and methods never before gathered under one cover plus previously unpublished work from the renowned international IRIS Integration of Reasoning Informing and Serving Group Fuzzy Holographic and Parallel Intelligence is the sixth generation breakthrough     *Foundations of Distributed Artificial Intelligence* G. M. P. O'Hare,N. R. Jennings,1996-04-05 Distributed Artificial Intelligence DAI is a

dynamic area of research and this book is the first comprehensive truly integrated exposition of the discipline presenting influential contributions from leaders in the field Commences with a solid introduction to the theoretical and practical issues of DAI followed by a discussion of the core research topics communication coordination planning and how they are related to each other The third section describes a number of DAI testbeds illustrating particular strategies commissioned to provide software environments for building and experimenting with DAI systems The final segment contains contributions which consider DAI from different perspectives **Neural and Intelligent Systems Integration** Branko Souek,The IRIS Group,1991-11-11 Combines new techniques of software automation system adaptation module selection self organization and automated discovery Presents results from the IRIS Group findings from American European Korean and Japanese projects on this emerging discipline Explores methods of combining well defined intelligent modules for integration into intelligent systems Modules include intelligent algorithms and programs neural networks and computing elements fuzzy data comparators and correlators spare distributed memories expert systems intelligent databases associative and parallel processing units and data acquisition control and robot units *Intelligent Systems Report* ,1991 **Machine Learning and Statistics** G. Nakhaeizadeh,C. C. Taylor,1997 The book s main focus is on classification the most common area of intersection The classification process uses information about a new example to assign the example to one of a known number of classes Such methods typically involve a rule learned from an initial set of data which is where ML comes into play *Frontier Decision Support Concepts* Vito Leonardo Plantamura,Branko Soucek,Giuseppe Visaggio,1994 The latest installment in the bestselling Sixth Generation Computer Technologies series focuses on four different classes of networks holographic neighborhood competitive and control motion networks Applications are provided in such diverse fields of finance and process control intelligent and flexible manufacturing and robotics among others *Dynamic, Genetic, and Chaotic Programming* Branko Soucek,The IRIS Group,1992-05-06 Explains and applies five paradigms rule based computing genetic programming algorithms natural adaptation software of chaos to dynamic processes such as robotics natural languages control complex system design or optimization Offers in depth examination of the underlying principles and then concentrates on concrete examples real world problems and applications **Modular Learning in Neural Networks** Tomas Hrycej,1992-10-09 Modular Learning in Neural Networks covers the full range of conceivable approaches to the modularization of learning including decomposition of learning into modules using supervised and unsupervised learning types decomposition of the function to be mapped into linear and nonlinear parts decomposition of the neural network to minimize harmful interferences between a large number of network parameters during learning decomposition of the application task into subtasks that are learned separately decomposition into a knowledge based part and a learning part The book attempts to show that modular learning based on these approaches is helpful in improving the learning performance of neural networks It demonstrates this by applying modular methods to a pair of benchmark cases a medical classification

problem of realistic size encompassing 7 200 cases of thyroid disorder and a handwritten digits classification problem involving several thousand cases In so doing the book shows that some of the proposed methods lead to substantial improvements in solution quality and learning speed as well as enhanced robustness with regard to learning control parameters    **International Aerospace Abstracts** ,1993    **Integrating Rules and Connectionism for Robust Commonsense Reasoning** Ron Sun,1994-02-21 Along with this framework the book proposes a set of interrelated new ideas regarding the modeling of commonsense reasoning which are highly relevant to current research in AI and cognitive science and the ongoing methodological debate    **Evolution and Optimum Seeking** Hans-Paul Schwefel,1995-01-23 Presents numerical optimization methods and algorithms applied to computer calculations The methods consist of the adaptation of simple evolutionary rules to a computer procedure which is to search for optimal parameters within a simulation model of a technical device Accompanied by a diskette containing the algorithms presented in the book    *Fast Learning and Invariant Object Recognition* Branko Soucek,The IRIS Group,1992-05-07 This applications oriented book presents for the first time Learning Generalization Seeing Recognition Hybrids Numerous new learning algorithms are described including holographic networks adaptive decoupled momentum feature construction second order gradient and adaptive symbolic methods Object recognition systems in real time applications are presented and include massively parallel and systolic array implementations These systems exhibit up to 2 billion operations and over 300 billion connections per second Position scale and rotation invariant systems for industrial machine vision are presented including testing of IC chips flying object recognition space shuttle and aircraft experiments detection of moving objects shape recognition in manufacturing recognition of occluded objects biomedical image classification three dimensional ultrasonic imaging in clinical ophthalmology and others New invariant object recognition paradigms include orthogonal sets of feature layers higher order neural networks detection of movement attention tracking landmark matching segmentation of three dimensional images dynamic links on the reduced mesh of trees Fast Learning and Invariant Object Recognition presents a unified treatment of material that has previously been scattered worldwide in a number of research reports as well as previously unpublished methods and results from the IRIS Integration of Reasoning Informing and Serving Group
