Fuzzy Systems Design Social And Engineering Applications:

Fuzzy Systems Design Leonid Reznik, Vladimir Dimitrov, Janusz Kacprzyk, 1998-07-20 Fuzzy logic is a way of thinking that is responsive to human zeal to unveil uncertainty and deal with social paradoxes emerging from it In this book a number of articles illustrate various social applications to fuzzy logic The engineering part of the book contains a number of papers devoted to the description of fuzzy engineering design methodologies In order to share the experience gained we select papers describing not the application result only but the way how this result has been obtained that is explaining the design procedures The potential readership of this book includes researchers and students workers and engineers in both areas of social and engineering studies It can be used as a handbook and textbook also The book includes some examples of real fuzzy engineering

Design of Interpretable Fuzzy Systems Krzysztof Cpałka, 2017-01-31 This book shows that the term interpretability goes far beyond the concept of readability of a fuzzy set and fuzzy rules It focuses on novel and precise operators of aggregation inference and defuzzification leading to flexible Mamdani type and logical type systems that can achieve the required accuracy using a less complex rule base The individual chapters describe various aspects of interpretability including appropriate selection of the structure of a fuzzy system focusing on improving the interpretability of fuzzy systems designed using both gradient learning and evolutionary algorithms It also demonstrates how to eliminate various system components such as inputs rules and fuzzy sets whose reduction does not adversely affect system accuracy It illustrates the performance of the developed algorithms and methods with commonly used benchmarks The book provides valuable tools for possible applications in many fields including expert systems automatic control and robotics

Social Fuzziology Vladimir Dimitrov, Bob Hodge, 2012-12-06 Fuzziology studies the fuzziness inherent in what we know about ourselves the sources and nature of our experience our thoughts and feelings drives for understanding and urges to create and realise our potential This kind of fuzziness is at the core of our existence at the essence of our humanness It affects any field of human activity be it mathematical study of fuzzy equations and fuzzy integrals engineering design and implementation of fuzzy logic based methodologies fuzzy control systems or fuzzy robots Social fuzziology investigates the role of fuzziness in understanding the dynamic complexity of human existence in the social world It is a study of the nexus

between the complex demands of life individual and social and the fuzziness of thinking Since human evolution over 2 billion years has seen the co evolution of social complexity with human language and thought it is likely that the fuzziness of language and thought is especially intimately formed by the demands of social complexity just as social complexity is sustained by the inherent fuzziness of language and thought Social fuzziology is not simply one field of application of fuzziology Given the initial state of the development of fuzziology social fuzziology needs to develop hand in hand with fuzziology each helping to advance the other

Introduction to Fuzziology: Study of Fuzziness of Knowing Vladimir Dimitrov, 2005 Fuzziology studies the sources nature and dynamics of fuzziness uncertainty embedded in our understanding of ourselves and the world we live in It aims at revealing the secrets of how to deal with uncertainty a not fighting with it in attempt to reduce or eliminate it but learning to collaborate with it and use its dynamics as catalysts for our growth in wisdom This is of vital importance in today's epoch of rapidly escalating complexity and uncertainty along every dimension of life The book describes a rich spectrum of theoretical and practical insights born out of the author's research in the field of human oriented applications of fuzzy logic and complexity a research to which he has devoted many years of his academic life

Systems Science and Cybernetics - Volume III Francisco Parra-Luna, The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the

maximum amount of wherever possible quantitative information available on each placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Computing with Words in Information/Intelligent Systems 1 Lotfi A. Zadeh, 2013-03-09 These two volumes consisting of Foundations and Applications provide the current status of theoretical and empirical developments in computing with words In philosophy the twentieth century is said to be the century of language This is mainly due to Wittgenstein who said The meaning of a word is its use in the language game The concept game is a concept with blurred edges In the first phrase the language game implies the everyday human activity with language and in the latter game simply implies an ordinary word Thus Wittgenstein precisely stated that a word is fuzzy in real life Unfortunately this idea about a word was not accepted in the conventional science We had to wait for Zadeh's fuzzy sets theory Remembering Wittgenstein's statement we should consider on the one hand the concept of computing with words from a philosophical point of view It deeply relates to the everyday use of a word in which the meaning of a word is fuzzy in its nature
