Reichel's Care of the Elderly Joseph J. Gallo, William Reichel, 1999 Geared specifically for the family practitioner this text provides clinical approaches to the whole geriatric patient Topics covered in this fifth edition include behavioural disturbances in dementia driving and the older adult and clinical practice guidelines in the elderly Dejong's The Neurologic Examinations Lakshmi Narasimhan Ranganathan, 2019-01-01 Key Points Numerous illustrations and clinical images ensure proper technique and emphasize key information necessary for an optimally effective examination Case scenarios bridge the gap between the book and the bedside The comments section has been tailored to maximize concept in minimum content **Geriatric Neurology** Anil K. Nair, Marwan N. Sabbagh, 2014-03-06 Aging affects neurological function leading to neurological disease As society grows older so do the neurological problems associated with aging These can be new neurological deficits due to the aging process itself or the effect of aging on already existing neurological conditions Neurologists will spend increasing amounts of time managing patients with age related neurological complications Geriatric Neurology brings together the wisdom of world leading experts They have crafted a new textbook to define this emerging subspecialty from basic science through clinical assessment and medical management to social aspects of patient care Geriatric Neurology covers The aging brain in neurology Assessment of the geriatric neurology patient Neurological conditions in the elderly Therapeutics for the geriatric neurology patient Management issues beyond therapeutics Comprehensive in scope but with practical focus for effective patient care Geriatric Neurology provides top of class guidance for the management of elderly patients with neurological disorders Osteoporosis in Older Persons Gustavo Duque, Douglas P. Kiel, 2016-07-11 This new edition includes the most up to date information about the pathophysiology and new therapeutic alternatives for osteoporosis of advanced age It is written by investigators clinicians and basic scientists in the field of aging bone research It was just recently that a new syndrome osteoporosis of advanced age was recognized as a new entity with its own pathophysiology and potential treatments Unfortunately and despite the fact that hip fractures are mostly a consequence of this process and apart from the first edition of this book there are few publications about this subject The first edition of this book demonstrated that there is a need to understand the particular features of osteoporosis in older persons which is the main aim of this book The institutions where the authors are affiliated are highly recognized as

the main centers in aging bone research As an innovation the second edition includes some aspects of muscle and bone interaction focusing of the impact of age related muscle loss sarcopenia on the pathogenesis of falls and fractures in older persons As in the previous edition this book is expected to be the reference guide for geriatricians gerontologists and bone biologists as well as medical trainees in order to understand the mechanisms of senile osteoporosis with a practical approach to the treatment of its consequences

Ataxic Disorders Sankara H. Subramony,Alexandra Dürr,2011-09-21 This volume s primary goal is to provide a comprehensive understanding of recent developments and advancements in the study of ataxic disorders Beginning with an examination of the cerebellar region and then progressing to a fresh perspective on the clinical aspects of the various forms of ataxia this handbook gives clinicians a state of the art reference for the management of the many etiologies and neurological manifestations of ataxic disorders Clinicians will gain a broader understanding of generative ataxias and the genetic disorders associated with them In addition new neurophysiological and imaging techniques are discussed along with an in depth examination of the treatment and management protocols of ataxic diseases A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world s most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the neurosciences their impact on the understanding of neurological disorders and on patient care

Falls and Cognition in Older Persons Manuel Montero-Odasso,Richard Camicioli,2019-10-04 Despite of the enormous efforts of researchers and clinicians to understand the pathophysiology of falls in older adults and establish preventive treatments there is still a significant gap in our understanding and treating of this challenging syndrome particularly when we focus in cognitively impaired older adults Falls in older adults are a very common yet complex medical event being the fifth leading cause of death and a main cause of insidious disability and nursing home placement in our world aging population Importantly falls in the cognitively impaired double the prevalence of the cognitively normal affecting up of 60% of older adults with low cognition and increasing the risk of injuries The past decade has witnessed an explosion of new knowledge in the role of cognitive processes into the falls mechanisms This was also accompanied with clinical trials assessing the effect of improving cognition via pharmacological and non pharmacologic approaches to prevent falls and related injuries Unfortunately this revolution in emerging interventions left a gap between clinician scientists and researchers at academic centers where the new data had been generated and the practitioners who care for cognitively impaired patients with falls Most advances are published in specialty journals of geriatric medicine neurology and rehabilitation The aim of this book is to reduce this gap and to provide practical tools for fall prevention in cognitively impaired populations The proposed book is designed to present a comprehensive and state of the art update that covers the pathophysiology epidemiology and clinical presentation of falls in cognitively impaired older adults We additionally aim to reduce the knowledge gap in the association between cognitive processes and falls for practitioners from

a translational perspective from research evidence to clinical approach We will address gaps and areas of uncertainty but also we will provide practical evidence based guidelines for the assessment approach and treatment of falls in the cognitively impaired populations This book is a unique contribution to the field Existing textbooks on fall prevention focus in global approaches and only tangentially address the cognitive component of falls and not purposely address special populations and or settings as residential care and nursing homes Due to the expected increase of proportion of older adults with cognitive and mobility impairments this book is also valuable for the whole spectrum of the health care of the elderly By including a transdisciplinary perspective from geriatric medicine rehabilitation and physiotherapy medicine cognitive neurology and public health this book will provide a practical and useful resource with wide applicability in falls assessment and prevention

Activities of daily living and everyday functioning: From normal aging to neurodegenerative diseases Ondrej Bezdicek, Inga Liepelt-Scarfone, Joaquim Ferreira, Robert Fellows, 2023-04-14 **Diseases in the Elderly** Nages Nagaratnam, Kujan Nagaratnam, Gary Cheuk, 2016-02-25 This book provides a comprehensive overview of the two important issues relating to disease in elderly the age related changes and the pathophysiology of the diseases The book contains 19 chapters that are arranged by organ system and structured to cover the specific areas for a quick but in depth understanding of diseases in aging patients Unlike any other book on the market this text is concise and yet thorough in approach to the stipulated areas This book includes multiple choice questions that reinforce the concepts that are most vital to understanding and treating geriatric patients making it an outstanding resource on its own or as a companion to larger geriatric texts Diseases in the Elderly is the ultimate resource for geriatricians medical students primary care physicians hospital doctors geriatric nurses and all other medical professionals treating and diagnosing diseases in elderly patients Insights in neurocognitive aging and behavior: 2022 Kristy A. Nielson, Annalena Venneri, Shin Murakami, 2024-01-30 **Cerebral Small Vessel Disease** Leonardo Pantoni, Philip B. Gorelick, 2014-05-01 Small vessel disease is an important frontier in neurology about 25% of strokes are classified as small vessel and SVD is the most common cause of vascular cognitive impairment The risk of developing SVD increases with age making this a growing concern for countries with aging populations Despite this there has been a paucity of information about its causes diagnosis prevention and treatment This volume brings together contributions from leading international experts in the field and discusses pathogenesis pathophysiology clinical and radiologic manifestations prevention and treatment modalities and future directions for research and practice Genetic forms of SVD are discussed as well as the rapid development of neuroimaging techniques as tools for screening and treatment This authoritative book is essential reading for neurologists stroke physicians geriatricians and interventional neuroradiologists as well as researchers in the fields of aging and dementia **Falls, Balance and Gait Disorders in the Elderly** Bruno J. Vellas, 1992 **Locomotion and Posture in Older Adults** Fabio Augusto Barbieri, Rodrigo Vitória, Paulo Cezar Rocha dos Santos, 2025-02-19 This book sheds new light on the effects of aging and movement disorders on movement control during

walking and postural tasks Understanding these dynamics is more important than ever as we face a future where the number of older adults is projected to double by 2050 The severity of this framework is exacerbated when aging is accompanied by movement disorders such as Parkinson s disease Chorea Multiple Sclerosis Dystonia and Huntington s disease The book explores how complex interactions between musculoskeletal and neural systems are required for efficient execution of daily activities like walking and maintaining posture The chapters in this comprehensive volume address the multifaceted challenges posed by aging and movement disorders in gait and postural control including innovative rehabilitation strategies and the role of artificial intelligence Expert contributors examine how environmental sensorial motor cognitive and individual factors influence locomotor and postural activities Readers will discover cutting edge research findings that address critical questions about planning performance and impairment in these essential functions This book is a must read for anyone seeking to understand and reduce the effects of aging and movement disorders on gait and posture This book is an invaluable resource for clinicians physical therapists occupational therapists psychologists biologists researchers health professionals as well as those involved in physical education and sports medicine It highlights the mechanisms involved in controlling and planning postural and gait tasks in both neurologically healthy older individuals and those who suffer from movement disorders offering new perspectives on interventions and technologies designed to improve understanding or delay impairments due to aging or movement disorders on gait and posture Whether you re a practitioner or researcher in related fields this book equips you with the essential knowledge to enhance the quality of life for older adults facing these challenges

Advanced Age Geriatric Care Nages Nagaratnam,Kujan Nagaratnam,Gary Cheuk,2018-11-26 As the Baby Boomers age concerns over healthcare systems abilities to accommodate geriatric patients grow increasingly challenging This is especially true with the population deemed to be the oldest of the old specifically those over the age of 85 Unlike any other time in history this demographic is the fastest growing segment of most developed countries In the United States the oldest old is projected to double from 4.3 million to 9.6 million by 2030 The increased life expectancy of the population since the early 1900s has been built on the improvement of living conditions diet public health and advancement in medical care With this we have seen a steady decline in the age specific prevalence of vascular and heart diseases stroke and even dementia Older persons are healthier today than their counterparts decades ago More importantly than in any other age group the care of the oldest old must be individualized management decisions should be made taking into consideration the older persons expressed wishes quality of life function and mental capacity The inevitable consequence is that there will be an increase in the prevalence of older persons with chronic diseases multiple co existing pathologies and neuro degenerative diseases The oldest of the aging population are often excluded from drug trials and their treatments are largely based on findings extrapolated from that of the younger old Furthermore among the oldest old physiologically they are more diverse than other segments of the population Their demographic characteristics are unparalleled and different compared to that of the younger

old Several studies have drawn attention to the differing attitudes among health professionals towards elderly people and many show prejudice because they are old As a result the use of age as a criteria in determining the appropriateness of treatment is of very limited validity yet there are limited resources that guide physicians through these challenges This book creates a greater awareness of these challenges and offers practical guidelines for working within the infrastructures vital to this demographic This book is designed for geriatricians primary care physicians junior medical officers specialty geriatrics nurses and gerontologists It is divided into 3 sections General Considerations Chronic diseases and Geriatric Syndromes Each chapter provides a summary of important and essential information under the heading of Key Points Case studies are included in some of the chapters to highlight the principles of management

Parkinson's Disease and Movement Disorders Charles H. Adler, J. Eric Ahlskog, 2000-04-07 The field of movement disorders is relatively broad encompassing disorders of increased movement such as tremors dystonia and tics to disorders characterized by a paucity of movement such as Parkinson s disease Our understanding of the pathogenic mechanisms and our treatment options are expanding at a rapid pace This expansion ranges from the medical and surgical advances in treating Parkinson s disease to the flood of genetic abnormalities that have now been found to cause various movement disorders Although many patients are seen by the movement disorders specialist in neurology clinics around the country most of these patients receive their followup care from a primary care physician or general neurologist who must be versed in the characteristics and treatment plans of this diverse group of disorders The major goal of *Parkinson s Disease and Movement Disorders Diagnosis and Treatment Guidelines for the Practicing Physician* is to distill this immense amount of information and to educate the practitioner about the many facets of the movement disorders field We believe that this book fills a large void since most texts on movement disorders are more detailed and geared toward the specialist We have asked the chapter authors to emphasize the clinical characteristics of each disorder discuss the differential diagnosis and the diagnostic testing and then outline the various treatment options as if they were teaching during a preceptorship in their clinic

Healthy Aging Patrick P. Coll, 2019-03-29 This book weaves all of these factors together to engage in and promote medical biomedical and psychosocial interventions including lifestyle changes for healthier aging outcomes The text begins with an introduction to age related changes that increase in disease and disability commonly associated with old age Written by experts in healthy aging the text approaches the principles of disease and disability prevention via specific health issues Each chapter highlights the challenge of not just increasing life expectancy but also decreasing disease burden and disability in old age The text then shifts into the whole person implications for clinicians working with older patients including the social and cultural considerations that are necessary for improved outcomes as Baby Boomers age and healthcare systems worldwide adjust Healthy Aging is an important resource for those working with older patients including geriatricians family medicine physicians nurses gerontologists students public health administrators and all other medical professionals
