humanism and ethnicity before race Ian Campbell,2015-11-01 The modern ideology of race so important in twentieth century Europe incorporates both a theory of human societies and a theory of human bodies Ian Campbell s new study examines how the elite in early modern Ireland spoke about human societies and human bodies and demonstrates that this elite discourse was grounded in a commitment to the languages and sciences of Renaissance Humanism Emphasising the education of all of early modern Ireland s antagonistic ethnic groups in common European university and grammar school traditions Campbell explains both the workings of the learned English critique of Irish society and the no less learned Irish response Then he turns to Irish debates on nobility medicine and theology in order to illuminate the problem of human

heredity He concludes by demonstrating how the Enlightenment swept away these humanist theories of body and society prior to the development of modern racial ideology in the late eighteenth century

The Scientific Revolution William E. Burns, 2001-10-23 An encyclopedic collection of key scientists and the tools and concepts they developed that transformed our understanding of the physical world Many are familiar with the ideas of Copernicus Descartes and Galileo But here the reader is also introduced to lesser known ideas and contributors to the Scientific Revolution such as the mathematical Bernoulli Family and Andreas Vesalius whose anatomical charts revolutionized the study of the human body More marginal characters include the magician Robert Fludd The encyclopedia also discusses subjects like Arabic science and the bizarre history of blood transfusions and institutions like the Universities of Padua and Leiden which were dominant forces in academic medicine and science

Eating and Being Steven Shapin, 2024-11-20 What we eat who we are and the relationship between the two Eating and Being is a history of Western thinking about food eating knowledge and ourselves In modern thought eating is about what is good for you not about what is good Eating is about health not about virtue Yet this has not always been the case For a great span of the past from antiquity through about the middle of the eighteenth century one of the most pervasive branches of medicine was known as dietetics prescribing not only what people should eat but also how they should order many aspects of their lives including sleep exercise and emotional management Dietetics did not distinguish between

the medical and the moral nor did it acknowledge the difference between what was good for you and what was good Dietetics counseled moderation in all things where moderation was counted as a virtue as well as the way to health But during the nineteenth century nutrition science began to replace the language of traditional dietetics with the vocabulary of proteins fats carbohydrates and calories and the medical and the moral went their separate ways Steven Shapin shows how much depended upon that shift and he also explores the extent to which the sensibilities of dietetics have been lost Throughout this rich history he evokes what it felt like to eat during another historical period and invites us to reflect on what it means to feel about food as we now do Shapin shows how the change from dietetics to nutrition science fundamentally altered how we think about our food and its powers our bodies and our minds *The Double Face of Janus and Other Essays in the History of Medicine* Owsei Temkin, 2006-11-02 Preeminent historian of medicine Owsei Temkin brought to his writing an awesome range of scholarship for he was at home in the classical the medieval and the modern eras The essays gathered in this volume deal with all the topics that Temkin considered most important in his work They were widely commended for their originality intelligent analysis and impressive continuity of thought Temkin explores the history of basic medical sciences of health and disease and of surgery and drug therapy as well as general questions concerning the historical and philosophical approach to medicine from antiquity to the early twentieth century In a retrospective introduction which gives the book its name Temkin relates his writings to his career as a scholar in Germany and the United States He situates the writings against the background of the development of the study of medical history and provides recollections of such prominent figures as Karl Sudhoff Henry E Sigerist William H Welch and Richard H Shryock *Impressionable Biologies* Maurizio Meloni, 2019-01-10 During the twentieth century genes were considered the controlling force of life processes and the transfer of DNA the definitive explanation for biological heredity Such views shaped the politics of human heredity in the eugenic era controlling heredity meant intervening in the distribution of good and bad genes However since the turn of the twenty first century this centrality of genes has been challenged by a number of postgenomic disciplines The rise of epigenetics in particular signals a shift from notions of biological fixedness to ideas of plasticity and impressionability of biological material This book investigates a long history of the beliefs about the plasticity of human biology starting with ancient medicine and analyses the biopolitical techniques required to govern such permeability It looks at the emergence of the modern body of biomedicine as a necessary displacement or possibly reconfiguration of earlier plastic views Finally it analyses the returning of plasticity to contemporary postgenomic views and argues that postgenomic plasticity is neither a modernistic plasticity of instrumental management of the body nor a postmodernist celebration of potentialities It is instead a plasticity that disrupts clear boundaries between openness and determination individual and community with important implications for notions of risk responsibility and intervention *Routledge Handbook of Intoxicants and Intoxication* Geoffrey Hunt, Tamar Antin, Vibeke Asmussen Frank, 2022-11-30 Bringing together scholars from different disciplines in the

humanities and social sciences this multidisciplinary Handbook offers a comprehensive critical overview of intoxicants and intoxication The Handbook is divided into 34 chapters across eight thematic sections covering a wide range of issues including the meanings of intoxicants the social life of intoxicants intoxication settings intoxication practices alternative approaches to the study of intoxication scapegoated intoxicants discourses shaping intoxication and changing notions of excess It explores a range of different intoxicants including alcohol tobacco coffee tea and legal and illicit drugs including amphetamine cannabis ecstasy khat methadone and opiates Chapter length case studies explore these intoxicants in a variety of countries including the USA the UK Australia Bosnia Herzegovina Brazil Denmark Ireland Japan Kyrgyzstan Nigeria Singapore and Sweden across a broad timespan covering the nineteenth century to the present day This wide ranging Handbook will be of great interest to researchers students and instructors within the humanities and social sciences with an interest in a wide range of different intoxicants and different intoxication practices Chapters 15 and 31 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

A Critical Examination of Ethics in Health Care and Biomedical Research Richard M. Zaner, 2015-06-11 This book is a critical examination of certain basic issues and themes crucial to understanding how ethics currently interfaces with health care and biomedical research Beginning with an overview of the field it proceeds through a delineation of such key notions as trust and uncertainty dialogue involving talk and listening the vulnerability of the patient against the asymmetric power of the health professional along with professional and individual responsibility It emphasizes several themes fundamental to ethics and health care 1 the work of ethics requires strict focus on the specific situational understanding of each involved person 2 Moral issues at least those intrinsic to each clinical encounter are presented solely within the contexts of their actual occurrence therefore ethics must not only be practical but empirical in its approach 3 Each particular situation is in its own way imprecise and uncertain and the different types and dimensions of imprecision and uncertainty are critical for everyone involved 4 Finally medicine and health care more broadly are governed by the effort to make sense of the healer's experiences with the patient whose own experiences and interpretations are ingredient to what the healer seeks to understand and eventually treat In addition to providing a way to develop ethical considerations in clinical life and research projects the book proposes that narratives provide the finest way to state and grapple with these themes and issues whether in classrooms or real life situations It concludes with a prospective analysis of newly emerging issues presented by and within the new genetics which together within a focus on the phenomenon of birth leads to a clearer understanding of human life

The Limits of Medicine Edward S. Golub, 1997-05 Edward Golub distinguished

researcher and former professor of immunology shows that major advances in medicine are caused by changes in the way scientists describe disease. Bleeding, sweating, and other treatments we consider barbaric were standard treatments for centuries because they conformed to a conception of disease shared by patients and doctors. Scientific breakthroughs in the understanding of disease in the nineteenth century transformed treatment and the goals of medicine. Golub argues that the ongoing revolution in molecular genetics has opened the door to the biology of complexity, again transforming our view of disease. This thought-provoking, timely book reveals a crucial but overlooked role of science in medicine and offers a new vision for the goals of both science and medicine as we enter the twenty-first century.
