Galileo Galilei: El mártir de la ciencia Fabricio Sales Silva,2025-05-06 Cuando miro hacia atrás a lo largo de los vastos corredores del tiempo me doy cuenta de que mi vida ha sido un viaje de búsqueda incesante de la verdad escondida en las sombras de lo conocido Soy Galileo Galilei el hombre que se atrevió a mirar a través de un telescopio y desafiar las verdades establecidas para descubrir las leyes que gobiernan nuestro magnífico universo Desde mis primeros días en Pisa siempre me ha impulsado una curiosidad implacable un deseo ardiente de entender cómo funcionan realmente las cosas Medir lo que es medible y hacer medible lo que no lo es esa ha sido siempre mi filosofía Y fue esta pasión por la medicina y la comprensión la que me guió a través de las controversias y logros que marcaron mi camino Viví en una época en la que la aceptación acrítica de las verdades establecidas era la norma pero elegí un camino diferente Elegí cuestionar explorar y descubrir Mi camino no ha sido fácil Me enfrenté a la oposición a la censura e incluso a la amenaza de tortura Pero en el corazón de la adversidad encontré una resiliencia que ni siquiera yo sabía que poseía Y sin embargo se mueve murmurando durante mi juicio reafirmando mi creencia en la inmensidad del universo que se despliega ante mis ojos En este libro animo a cada uno de ustedes a abrazar la libertad de pensar En un mundo que a menudo valora la conformidad por encima de la innovación la libertad de pensamiento es su posesión más preciada Protégelo cultívalo y sálo para explorar los límites de lo que es posible y lo que es imposible

Vidas sintéticas Ricard Solé, 2016-09-27

Una aproximación revolucionaria a la ciencia la historia y la mente Con el cambio de siglo la ciencia está experimentando una revolución que nos acerca a los límites del conocimiento humano A lo largo de las últimas décadas los investigadores han conseguido recrear en el ordenador entidades tan diferentes como células enfermedades cerebros o climas todo ello en busca de leyes que definan su funcionamiento En esta larga travesía cuestiones fundamentales acerca del origen de la materia y de la vida la naturaleza de la conciencia o la posibilidad de predecir el comportamiento humano han

ido conquistando terreno a la filosofía hasta el punto de que para muchos la ciencia es la que realmente puede abordar las cuestiones clásicas y su posible respuesta. Hoy en día nuestra capacidad para construir mundos virtuales e incluso diseñar en el laboratorio sistemas vivos sintéticos ha dado un empuje inusitado a esta visión. Ya es posible experimentar la inmersión en realidades virtuales y algunas de ellas ponen a prueba nuestra percepción de lo real. Existen robots evolucionados que son capaces de mentir a células artificiales que permiten diseñar circuitos vivos y modelos que investigan cómo frenar el envejecimiento y detener el cáncer. Los mundos sintéticos nos acercan a los límites de lo posible enfrentándonos también a nuevas preguntas y respuestas.

Ciencia, Tecnología Y Sociedad Rafael Reyes Pérez Rangel, 2010-12-29 En el mundo de hoy la ciencia y la tecnología juegan un papel de primer orden que nunca desempeñaron en pocas pasadas lo que se concreta en los productos resultantes de la actividad científica y técnica materializados en equipos, aparatos y servicios electrónicos difundidos masivamente. En este contexto el principal propósito de esta obra es contribuir a la formación de ciudadanos que sepan desenvolverse responsablemente en este mundo a fin de que sean capaces de tomar decisiones fundamentadas frente a esos desarrollos y sus consecuencias. Al logro de este objetivo se le está concediendo cada vez más importancia porque en un mundo saturado de equipos de alta tecnología la alfabetización científica se ha convertido en una necesidad universal. En este libro se comparten principios, reflexiones y estrategias con los educadores sean padres, profesores, científicos, periodistas, administradores de programas o líderes sociales para alcanzar procesos que contribuyan a mejorar la calidad educativa logrando un importante avance en la alfabetización científico-tecnológica de los jóvenes que despierte a su vez en ellos genuinas vocaciones para la ciencia y la tecnología que tanto demanda el urgente y necesario desarrollo humanista y sustentable del que tanto carece el mundo actual.

Una mecánica sin talachas Fermín Viniegra Heberlein, 2017-05-18 Obra muy interesante en la que el autor se remonta a los primeros y rudimentarios esfuerzos en el campo ahora denominado mecánica y prosigue haciendo el estudio de la evolución de esta ciencia que condujo a la mec

nica de Newton y en el siglo XX a la mecánica cuántica. Todo narrado en forma anecdótica sin olvidar hacer la historia de la ciencia. *Ciencias Naturales 7* IGER, *Pensar la ciencia desde la biología. Una visión evolutiva del conocimiento biológico* María José Prieto Villanueva, 2017-05-16 En la actualidad la ciencia sigue practicándose e interpretándose mayoritariamente desde el paradigma cartesiano baconiano nacido con la revolución científica del siglo XVII el cual lleva implícita una concepción lineal de los saberes que da razón de algunas leyes, reglas e hipótesis pero que no permite validar otros planteamientos ni explica de manera satisfactoria la creatividad. Disciplinas como la filosofía de la ciencia, la epistemología, la psicología, la física y las matemáticas desarrolladas en el siglo XX o la neurociencia más reciente han puesto de manifiesto la conveniencia de adoptar un nuevo marco de entendimiento. Este libro reflexiona sobre la necesidad de avanzar hacia una visión integral de la ciencia aplicando lo que el pensamiento evolutivo y ecológico ya formula de forma explícita. Lamarck, zoólogo del siglo XVIII y padre del concepto de biología, advirtió que la comprensión de lo viviente en la acertada expresión aristotélica no podría prosperar si se separaba del análisis filosófico. Su profética visión tiene hoy más vigencia que nunca. **Galileo Galilei** Manuel Campuzano Arribas, 2007-10-18 Nacido cerca de Pisa en 1564, Galileo Galilei vivió en Florencia de joven y retornó a ella en 1610 bajo el mecenazgo de los Medici tras residir en Venecia, Pisa y Padua. Murió en 1642 en Arcetri. Galileo se mostró partidario de las ideas de Nicolás Copérnico (1473-1543) que defendían la teoría de que los planetas, incluyendo la Tierra, giraban alrededor del sol. Ello cuestionaba las tesis geocéntricas imperantes en esa época basadas en la obra de Tolomeo (siglo II d.C.) que postulaban que el Universo giraba en torno a una Tierra estática de la cual era su elemento central. Tras la publicación en 1632 de su *Dialogo sopra i due massimi sistemi del mondo*, Galileo fue procesado por la Inquisición por herejía y obligado a abjurar de la teoría heliocéntrica el 22 de junio de 1633 en el centro de Roma, en el convento de Santa Maria sopra Minerva. Si existe un hecho que pueda considerarse epítome del enfrentamiento entre astrónomos y teólogos con motivo de la estructura del Universo es el proceso incoado contra Galileo en unión a la sentencia que recayó sobre él. A este hombre cuyas observaciones con su recién inventado telescopio sirvieron para confirmar muchos de los puntos de la teoría copernicana y que se había declarado abiertamente defensor de la visión heliocéntrica se le había exigido durante años, en nombre de su Santidad, el Papa, y de toda la congregación del Santo Oficio que abandonara completamente la idea de que el Sol es el centro del mundo y que permanece inmóvil mientras que la Tierra se mueve. **La ciencia y las manos de Minerva** Ricardo Rodríguez Mijangos, 2020-08-18 Este libro está dirigido a todo el público interesado en conocer la ciencia y su devenir histórico. Parte de la premisa de que la ciencia se desarrolla a partir del uso del potencial humano, la dupla mente-manos. El punto de quiebre es en el renacimiento cuando se inicia el método experimental y el uso de las manos como auxiliar en la búsqueda del conocimiento. Metafóricamente las manos de Minerva, la diosa de la sabiduría romana, nos va desvelando la realidad. Experimentos que obligan a repensar lo que antes solo se concebía con la mente. En el siglo XX irrumpen el quantum, el espacio-tiempo, la dualidad onda-partícula, ideas generadas por experimentos. Un entretenido paseo por las mentes y manos.
