

## **Game Theory as an Instrument for the Analysis of International Relations**

Hector Correa\*

### **1. Introduction**

International relations, as characterized, among other authors, by Evans and Newnham (1998, pp. 274n), Lake and Powell (1999, pp. 3n), Reynolds (1994, pp. 15n) and Wolfers (1991, pp. 31n) deals with the interactions among specific actors which include nation-states, international organizations, and multinational corporations.

From this it follows that game theory, whose objective is the formalized analysis of relationships among two or more actors, can assist international relations theoreticians in explaining the interactions among the actors it considers, and practitioners in the field to influence those interactions to benefit the actors they represent or, hopefully, all humankind.

In fact, as eloquently shown by Poundstone (1992), game theory and international relations have influenced each other almost since the publication of The Theory of Games and Economic Behavior by von Neumann and Morgenstern (1944), usually considered to be the first systematic and extensive formal analysis of social interactions. Bennett and Nicholson (1994, p. 209) indicate that this interaction has been both friendly and conflictive, and considered by some to be constructive and by others destructive.

The object of this paper is to demonstrate the possibilities and limitations of game theory as an instrument for the study of international relations. The approach to be used describes elementary game theoretic models as an integral part of international relations, rather than as a collection of examples of the mathematics of game theory. A similar approach, but at a higher level of sophistication and with a more limited coverage, is used by Powell (1999).

Strategic Choice and International Relations David A. Lake, Robert Powell, 2020-05-05 The strategic choice approach has a long pedigree in international relations In an area often rent by competing methodologies editors David A Lake and Robert Powell take the best of accepted and contested knowledge among many theories With the contributors to this volume they offer a unifying perspective which begins with a simple insight students of international relations want to explain the choices actors make whether these actors be states parties ethnic groups companies leaders or individuals This synthesis offers three new benefits first the strategic interaction of actors is the unit of analysis rather than particular states or policies second these interactions are now usefully organized into analytic schemes on which conceptual experiments may be based and third a set of methodological bets is then made about the most productive ways to analyze the interactions Together these elements allow the pragmatic application of theories that may apply to a myriad of particular cases such as individuals protesting environmental degradation governments seeking to control nuclear weapons or the United Nations attempting to mobilize member states for international peacekeeping Besides the editors the six contributors to this book all distinguished scholars of international relations are Jeffry A Frieden James D Morrow Ronald Rogowski Peter Gourevitch Miles Kahler and Arthur A Stein Their
